Fort Atkinson, Wisconsin Volume LXI, No. 1 January 21, 1921

Make Dreams Come True

James plans make a barn all that a barn should be.

What better time than now to plan the barn that some day will be yours?

Even though you may not be certain that you will build during this coming season, you should plan now, so that when the time does come, you can go right ahead without delay and without mistakes.

Build on Paper First

Plan now that you may have plenty of time to study it over and make it an ideal barn.

Be sure you have the right amount of storage, enough light, air space and ventilation; work-saving arrangement for feeding, watering stock and cleaning the stable; easy handling of hay; right location of barn for sunshine and cold winds.

Make certain that the barn is correctly proportioned, individual in appearance, a barn that is strong and that will withstand all storms—one that will add value to your farm.

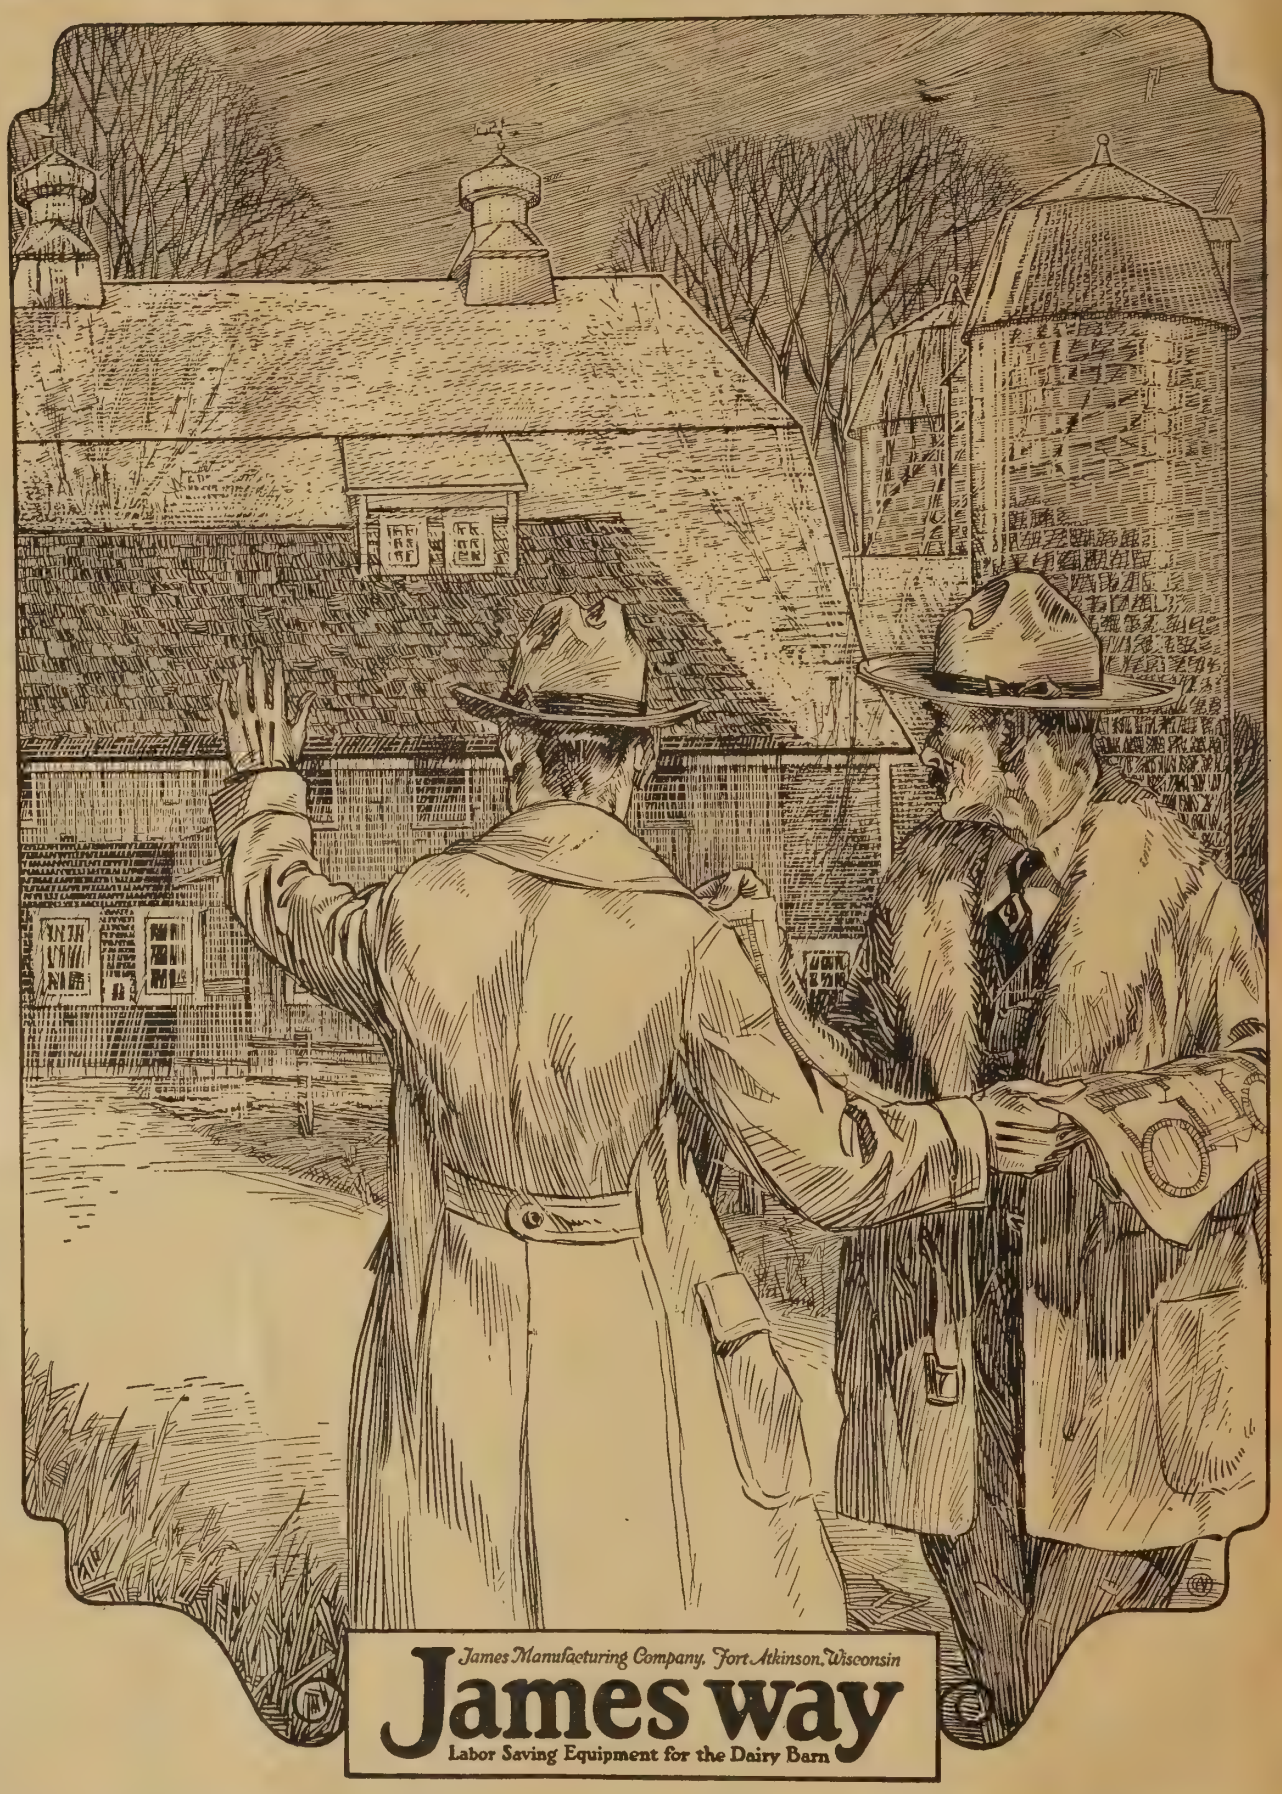
You can have all this without extra c

You Save by Planning

a barn costs depends in no degree on the care with which is planned in advance.

It is not uncommon to see one man with the "know how" build a barn at 20% to 30% less cost than another, although the two barns accommodate the same number of cows.

The man who plans well in advance is the man who builds cheaply.



By having his plans completely worked out and blue printed, he can submit them to several contractors, getting bids from each on *exactly* the same proposition.

Then he can safely let the contract to the lowest bidder.

Contractors and those supplying materials are held to exact requirements; substitution of inferior materials or workmanship can be prevented; wastes are avoided; no excuse is given for expensive "extras"; and misunderstandings with contractors, sub-contractors and workmen are unlikely.

Good plans insure better barns at lower cost.

James Manufacturing Company, Fort Atkinson, Wisconsin

James way

Labor Saving Equipment for the Dairy Barn

A "Clearing House" of Best Barn Ideas

James Barn Plans

To help our customers and others get the best barns possible, we established the Jamesway Barn Plan Service.

This is under the direct supervision of Mr. W. D. James, leading dairy barn authority. Architects of special experience in planning, building and remodeling dairy barns, a large force of skilled barn designers and draftsmen, and barn experts in charge of divisions of the field force, complete the office staff.

In the field are more than 60 men who practically every day are advising on remodeling and other barn problems, drawing preliminary plans and reporting on new ideas and unusual conditions.

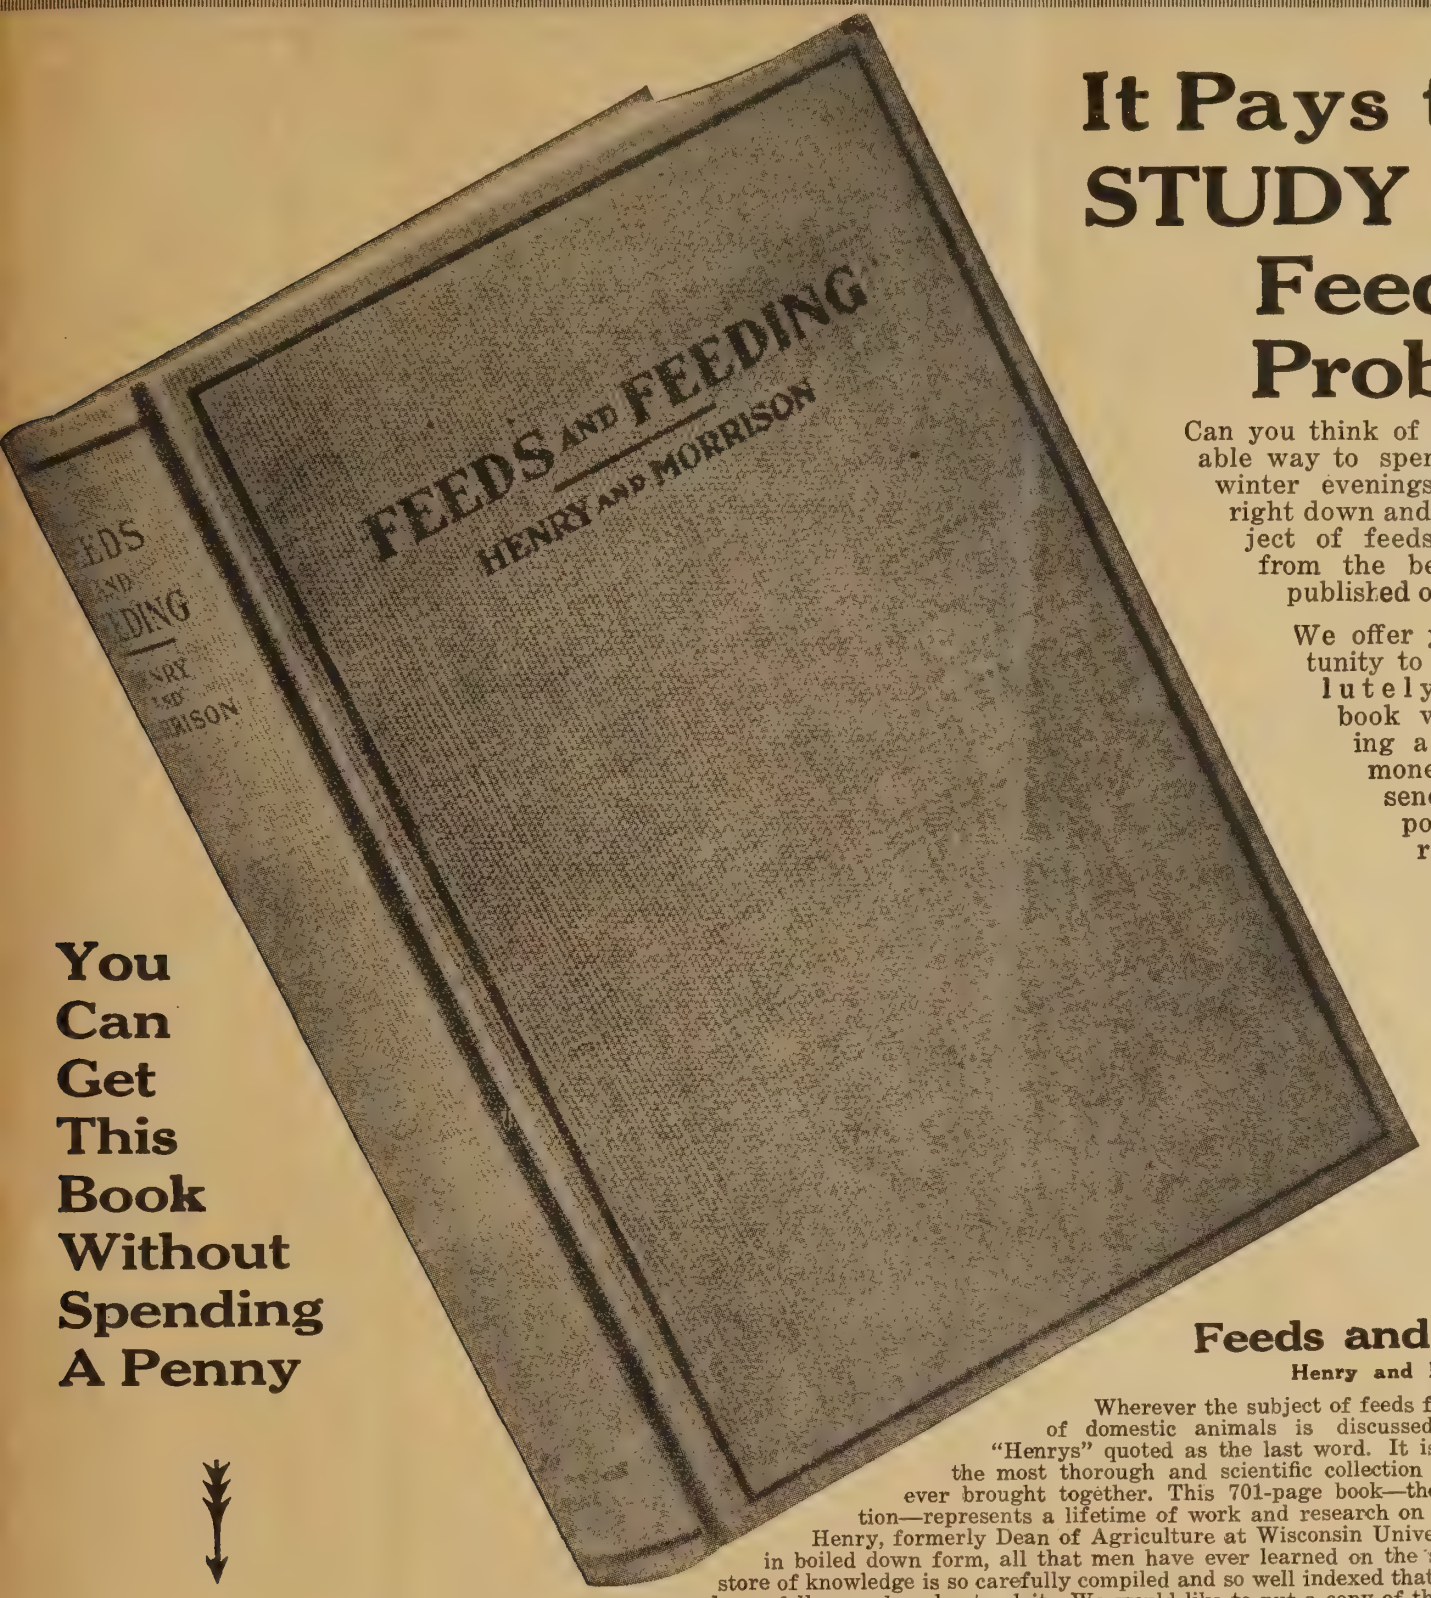
For years, Mr. James and these associates have studied dairy barns—construction, lighting, ventilation, drainage, arrangement to save labor; how best to remodel old barns.

Every year they help to plan thousands of dairy barns. Every year they visit thousands of dairy barns. The best barn ideas everywhere come to their notice and are tested out.

The experience and help of these men is yours for the asking.

Jamesway Book Free

The best of their ideas are in a 320 page book on barn building, remodeling, ventilation and equipment which will be sent postpaid on request.



28 pages of blue prints, 62 of pictures of barn interiors and exteriors, many pages valuable information on barn planning, remodeling, ventilation, equipment, etc.

Write us now. Tell us what barn problems are bothering you; perhaps we can help to solve them.

Ask for Jamesway Book No. 23.

James Manufacturing Company

FORT ATKINSON, WISCONSIN MINNEAPOLIS, 706 1st Ave. North ELMIRA, NEW YORK

It Pays to STUDY the Feeding Problem

Can you think of a more profitable way to spend these long winter evenings than to get right down and **study** the subject of feeds and feeding from the best book ever published on this subject?

We offer you an opportunity to get this absolutely authoritative book without spending a cent of your money. We will send it to you, postage paid, in return for a favor you can easily confer on us.

You Can Get This Book Without Spending A Penny

See Offer Below

Feeds and Feeding

Henry and Morrison

Wherever the subject of feeds for and the feeding of domestic animals is discussed, you will find "Henrys" quoted as the last word. It is without question the most thorough and scientific collection of facts on feeds ever brought together. This 701-page book—the seventeenth edition—represents a lifetime of work and research on the part of W. A. Henry, formerly Dean of Agriculture at Wisconsin University. It contains, in boiled down form, all that men have ever learned on the subject. This vast store of knowledge is so carefully compiled and so well indexed that any man who can read can follow and understand it. We would like to put a copy of this book into the library of every HOARD'S DAIRYMAN reader. Price $3.85.

Here's the Offer:

WE WILL SEND a copy of this 701-page book, postage prepaid, to any reader who will send us a club of just five subscriptions. They may be either new or renewal and either one-year-for $1.00 or three-years-for-$2.00 each. YOUR OWN RENEWAL MAY BE INCLUDED IN THE CLUB.

USE THIS COUPON—TEAR OFF ALONG THIS LINE.

Designed with consideration for the cow and in observance of the principles of milk secretion

Built to De Laval Standards

Backed by De Laval Service

Its Uniform Pulsations Please the Cow

A Better Way of Milking

After Years of Test and Use

LONG ago the De Laval Company realized there is no more reason for hand milking than for harvesting a grain crop by hand, and that a mechanical milker was necessary to place dairying on a machine basis.

But designing a milker was not simply a problem in mechanics. A successful mechanical milker must work in harmony with the delicate organism of a living cow.

After many years of thorough research and test, for which De Laval is famous, and after four years of commercial use on many dairy farms, the De Laval has proved itself to be a better way of milking.

Now the many De Laval users are practically unanimous in their agreement that it not only saves time and eliminates drudgery, but actually increases the flow of milk. Among De Laval users are many owners of purebred herds and also producers of certified milk.

The De Laval is a better way of milking. It will make your dairy business more profitable and pleasant. Write for full information.

FARM LIGHTING

A. G. TYLER, Minnesota College of Agriculture

LIGHT is a form of energy and, as we know, all forms of energy originate in the sun. Light and heat are exactly the same thing, that is, both are vibrations and they differ only in the rapidity with which these vibrations take place. It is possible to produce heat without producing light but light without heat has not yet been evolved. The reflected sunlight from the moon comes the nearest to being light without heat that we know of. Since light and heat are the same thing it is natural to expect that the things that will produce heat may be made to produce light. That this is a fact may be shown by observing that any kind of fuel may be converted into light after first passing through the heat stage.

The energy of the sun is stored in many different ways, some of which are not readily available for transformation into heat or light. Some of the more common substances and ways in which energy is stored are in oils, coal, wood, in fact in fuels of all kinds and in water and chemical compounds which may be made by bringing together some of the various elements or by separating some of the compounds.

Some of the things that we familiarly associate with light are candles of all kinds, kerosene, gasoline, Blaugas, coal gas, water gas, natural gas, acetylene, electricity, etc., not forgetting the light from the sun, moon, and stars.

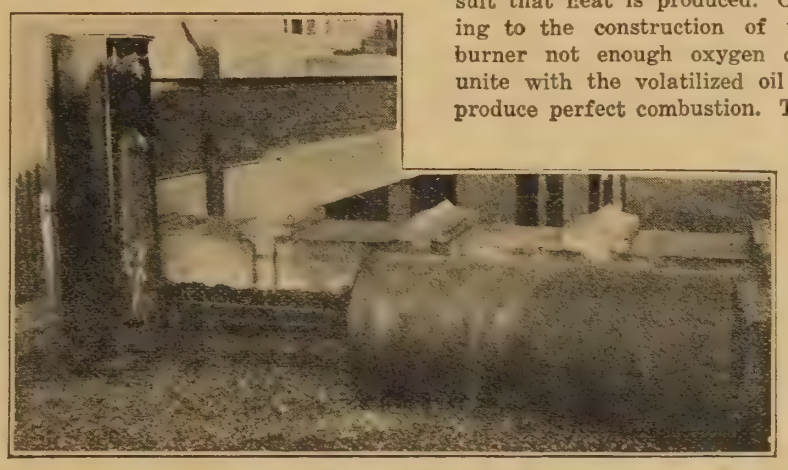
All there is to be seen of a pit type acetylene generator. It may be located anywhere on the premises.

Candles are things of the past so far as economical house illumination is concerned. They are still used to some extent for sentimental reasons and for religious purposes and again temporarily when other sources of light fail.

Candles

Our main interest in candles nowadays is due to the fact that practically all other forms of light are measured by and referred to as being of such and such candle power. The term candle power does not mean much unless it is rather closely defined. It will be readily seen that the size of the candle, kind of material and size and condition of the wick are all factors which will govern the amount of light given by any candle. The term candle power is generally considered to be the amount of light given by a standard candle burning under certain conditions. The ordinary paraffin candles will give slightly more than one candle power of light.

Kerosene is one of the many products obtained when petroleum is distilled. It is a liquid at ordinary temperatures and has a density of about .8 compared with that of water which is taken as 1.0. When crude oil is distilled various compounds are obtained; for instance, in the order named we get gasoline, naptha, benzine, kerosene, light lubricating oil, heavier lubricating oil, cylinder oil, and greases of various kinds, as axle grease and vaseline. Paraffin is also a petroleum product. There are other products obtained but from our point of view they will not be considered. The amount of and order in which the various compounds are obtained d pends upon the kind of crude oil which is under treatment. One kind has a paraffin base and another asphaltic base.



Kerosene

When crude oil is distilled the first products are naturally the most volatile, that is, they are vaporized at the lowest temperature, consequently they are the most explosive. Kerosene being part way down the scale is not very volatile as compared with gasoline, for instance. There are various grades of kerosene depending largely upon the temperature at which they are obtained. For use in lamps, kerosene should not give off a vapor at a lower temperature than about 120 degrees F., and the higher the temperature, up to about 150 degrees F., that this vapor will be noticed the safer the oil will be for household use. The temperature at which an oil will give off vapor, that may be ignited by a match, is known as the flash point.

Kerosene has been in more or less common use as an illuminant for about sixty years. It was, and still is, known in some parts of the country as coal oil from the fact that the crude oil from which it is obtained is generally found in regions where coal is mined or known to exist. The successful use of kerosene as a lighting agent depends almost altogether upon the burner. One type of burner uses a flat wick while another uses a round wick. In both cases the object is to bring the oxygen of the air in as close contact with the hydrogen and carbon of the fuel as possible. When these elements are raised to the ignition point, by means of a match for instance, a chemical combination takes place with the result that heat is produced. Owing to the construction of the burner not enough oxygen can unite with the volatilized oil to produce perfect combustion. The result is that while a certain amount of the oil is burned (mostly the hydrogen) a certain proportion is carried upward, first passing through the heated area. Most of this matter that is carried upward consists of particles of carbon which are heated to incandescence and which are later burned as they come in contact with the oxygen of the air. As every one knows if some object is placed over the chimney, if the chimney is raised, or if the wick is turned up too far, the flame will immediately begin to smoke. The reason is that the mixture of oil or oil gases and air is changed to such an extent that proper combustion does not take place.

From the foregoing statements it is natural to believe that if the air and oil could be brought together in the correct proportions there would be little if any light given out. This is exactly the case as is shown in the kerosene mantle lamp. In this type of lamp the oil and air are so mixed that practically perfect combustion takes place at once, producing great heat with but little light. The intense heat of the perfect combustion causes the mantle to become white hot. Thus it is the white hot mantle which produces the light rather than the flame itself. If not enough air or, rather, too much oil is being burned at any time the mantle will show black spots which are simply deposits of carbon. If a large proportion of air is admitted these carbon deposits will burn off and leave the mantle clear white.

The quality of light given out by a kerosene mantle lamp is excellent. It is a brilliant white light and is remarkably soft for its large candle power. It is also cheap and efficient but has the one great fault that it is not dependable under all conditions. The wick must be trimmed just so, the combustion must be practically perfect, extreme care must be taken in handling the lamp to see that the mantle is not broken, and considerable pains must be taken to heat the burner and mantle gradually. As a general thing these factors more than offset the excellent qualities of the light.

A SMALL BLAU-GAS OUTFIT

Control cabinet on the left, expansion tank on the right. All gas outfits should be outdoors.

Gasoline is used quite successfully and to quite a large extent for house and store lighting, especially in rural districts and small towns and villages where city gas is not available. There are several different devices for using gasoline as an illuminant but the principle is practically the same in all; that is, the gasoline is forced to the burner where it is vaporized and mixed with the proper amount of air and then burned in a mantle.

Gasoline

One of the most common types is known as the hollow wire system, so called because the gasoline is forced through a very small pipe or hollow wire from the supply tank to the burners. The tank, generally placed out of doors or in some out building or possibly in the cellar, holds from ten to twenty gallons and is ordinarily filled to about three-quarters full of gasoline. Air is forced in by an ordinary tire pump until the pressure is about thirty-five or forty pounds. The hollow wire is connected to the bottom of the tank so that gasoline and not air will be forced out. When the burner is reached the gasoline is

Some of the conveniences that may be enjoyed by installing a gas plant. Note the electrically operated gas plant. Push a button and it lights, push the other button and it goes out.

SELLING MILK WITHOUT STRIKES

Milwaukee Milk Producers' Association Satisfies Its Members Even When Prices Are Low. Sells on Basis of Supply and Demand.

MILWAUKEE, Wisconsin, takes the prize on low milk prices. When other markets paid as high as $4.50 to $4.95 for 3.5 per cent milk in December, Milwaukee paid but $2.75, the lowest of 43 representative cities, as shown by Bureau of Markets reports. Likewise, the retail price of 11 cents was a bottom value; consumers in all other large markets paying more, in some as high as 20 cents. That was in December. January sets a new low record, the producer receiving $2.30 per 100 lbs. and the consumer getting his daily quart for 10 cents.

Most unusual with these extremely low prices is the feeling prevalent among producers. Though their milk checks are slim, they aren't wasting time calling the distributors' names but are making the best of the situation. The milk dealers, on the other hand, are taking their full share of the drop and making no effort toward further cuts in the returns to the farmer. Even with extremely low prices there is much less trouble, in the city made famous by another than the lacteal beverage, between the man who produces milk and the man who retails it than in the majority of markets where much higher values prevail.

Producers' Association Promotes General Understanding

The reason for the smooth flow of the city's milk supply under such conditions—the cause of the intelligent understanding between buyer and seller—is the Milwaukee Milk Producers' Association. It keeps the producer informed, that he may not expect larger returns than market conditions justify, and it gives the distributor the facts which should govern prices. Its officers meet each month with representatives from the dealers and set the price for the following month. No formula is used in the calculations and little emphasis is given cost of production figures. Supply and demand and general milk marketing conditions set the price.

The milk is bartered—the dealers buying as cheaply as possible, and the association selling for all it can get. Selling milk is made a business proposition, buyer and seller coming together on a common basis and clear-mindedly doing what appears best for the business.

Association O. K.'d Low Price

So the association knew in advance that the slump was coming and the factors which brought it about. In fact, it had a hand in making the city's milk supply the cheapest in the country and was quite as willing to make the cut as were the dealers. Here's the reason. Fully 90 per cent of the 3,000 shippers to the city live within 30 miles of the market and the great part of the herds are less than 15 miles beyond the city limits. Sixty-five per cent of the 6,000 cans of milk comes in on trucks. Just outside this small milk shed is a ring of condenseries—and in that ring is the cause of Milwaukee's low milk prices. When the bottom fell out of the canned milk market, a flood of milk was made available to Milwaukee dealers. Even in October when the association price was $2.55 for an 8-gallon can, the condensery districts would have supplied it $1 cheaper. The reduction to $1.85 for December still left the condenseries anxious to turn their milk to Milwaukee for, before the month's end, they were buying butterfat alone and netting some of their patrons less than $1.25 per 100 lbs. of milk. The association was forced to sell milk cheaply enough to prevent a tremendous inflow of outside milk. The price set was not made by the distributors but by the association itself in order to save its market. The situation proved that an association may sometimes benefit its members in other ways than raising prices, even to bringing about a temporary reduction.

Price Setting a Tame Affair

The actual business of settling upon a price for Milwaukee's milk each month seems a tame affair to one familiar with the common procedure in many other whole milk districts. In interviewing both producers and distributors, no one called another a thief or a scoundrel; no farmer claimed the dealers are dishonest and unfair, that they are happy only when the producer sells his milk at a loss; and no dealer made the charge, so familiar in other cities, that all farmers are ignorant, inefficient, and undeserving of high returns. G. R. Rice, secretary for the association and the one on whose shoulders falls the bulk of its work, doesn't believe that all distributors are rascals and unwilling to deal fairly. He says: "Of course they buy as cheaply as they can, but I think they are doing exactly as we would in their places. There's nothing to be gained in fighting when we can make equitable settlements of our differences by meeting and talking matters over. We don't have milk strikes here. They're too expensive—a strike is a losing proposition even if we win. We operate on the fundamental theory that before you can sell anything you must have the buyer's confidence. We have tried to be fair and to warrant the confidence we seek."

That seems to be the kernel of the Milwaukee situation—mutual confidence. Dealer and producer meet in the association office and reach a bargain, each confident of fair dealing and neither keeping extra close watch of his hat and overcoat. Not all producers are satisfied with this peaceful condition of affairs. Some cling to the old notion that their representative should do a good bit of arm waving and loud talking to frighten the dealer into paying more. The majority, however, prefer to be represented on the basis of brains and facts rather than overworking the lungs in a fruitless effort to blow down the walls raised by dealers in protection against such tactics.

History of the Association

A history of Milwaukee's milk supply proves that the producers' association has benefited its members by increasing and stabilizing prices and in preserving a uniform market. Milk is sold by the can—not by the hundredweight. The eight-gallon can, which averages about 67¾ lbs. milk, is the standard unit. Also, in general, milk's milk, very little attention being given fat percentages, anything over 3 being accepted.

Cut-throat competition, stimulated by the system of delivering a decade ago, put retail milk at 6 cents per quart and made the milk business a loser for the farmer. Milk was sold haphazardly in Milwaukee by the haulers themselves. In 1904 an eight-gallon can sold for 88⅛ cents. In 1907, eleven cents more was paid. That year farmers organized in what Secretary Rice terms "a loose knit, $1.00 a year association". It had no official representatives. A committee went to the city, without having a knowledge of markets or the other factors which determine prices, saw the distributors, and went back home again to milk their cows. Three strikes were called, one lasting for six weeks. Their net result was to furnish good proof for Mr. Rice's statement that strikes are expensive. Not until 1916 did producers take a real interest in their market. In 1915 they received $1.13¾ for milk which was less than its butterfat value. In January, 1916, when they began their present organization, their milk was bringing less than it was worth for buttermaking 100 miles from market. The organization was capitalized at $10,000 with $10 shares. By the end of February 500 members had signed. A meeting was called for April 15, when a permanent association was formed and E. S. Robbins was elected president and G. R. Rice secretary, the two holding these offices since that time. No more capital stock was issued until January, 1920, when it was increased to $75,000. The association's income is provided by one cent per can which is deducted by the dealers from the checks of shippers. At present, members are being solicited for permission to deduce 2 cents per can, to provide funds for advertising milk.

The first work of the association was to gain the confidence of the dealers in order that a basis for price agreement might be worked out. So successful has the association been that Milwaukee is known the country over as a city where milk is sold without the resultless controversies which characterize the milk selling in so many places. The second work was to see that milk brings a uniform price in Milwaukee, that the association is not undersold by shippers who are not members. To do this necessitated providing for handling whatever milk a hauler may have, over that taken by his regular patrons.

Also, the association has handled the surplus problem. President Robbins says of that unwelcome part of the milk supply known as surplus: "Before our association was organized, dealers used surplus to beat down prices. Then when surplus came it was turned back on the farmer. We took this club out of their hands when we began handling surplus ourselves. We have averaged to use 200 cans a day and took care of as high as 800 cans last summer, managing to care for about two-fifths of the city's surplus. That which goes through our building loses us $.27 per can, but by caring for the surplus we stabilize our market. That loss is a good investment." Last year American cheese was made in the association's plant, this year the product goes into butter and milk powder.

The Unwelcome Surplus

The seriousness of this surplus problem is indicated by the fact that production in 1920 was increased about 15 per cent over that of 1919—on the same farms. In two years production increased 30 per cent. In 1919 the production from the farms of patrons of the Gridley Dairy Company, which distributes about 60 per cent of Milwaukee's milk, varied from 2,200 cans per day to 4,490. October 12, 1920, the patrons of this company delivered 3,100 cans, while on June 7 they sent in 5,940 cans.

While the association's plant handles only a part of the surplus, it is held that this serves to prevent price slumps and protects the market except under such extraordinary conditions as the present condensery catastrophe has brought about. In this plant the day to day surplus is processed so that an outlet is provided for extra milk and prices are not cut. Also the association thinks that it would be possible, if it becomes necessary, to relieve the dealers of all surplus. The association president says: "The association must have a kick behind it. Our plant is the kick."

Profits From Organization

It is not doubted that the producers' organization has paid its cost many times over. The 1919 average price was $2.496 per can, or $3.70 per hundred pounds. In 1920, even with November and December milk selling for $1.85 per can, the average was $2.292, or about $3.40 per hundred pounds. Before the association began its work, prices averaged below those at Chicago; now they are enough above that Chicago shippers are turning to the Milwaukee market. The president states that for the last two or three years the association has secured 30 to 50 cents more per can than would have been received without an organization. A conservative estimate by the secretary places the increased price, secured from the time the association was formed, at 10 cents per can. Add to this the fact that the market has been continuous with no costly strikes and good reason is found for the association's dependence on a system of bargaining backed up by a kick—the bargaining being done monthly on the basis of market conditions and the kick being in the form of a plant for handling surplus.

Market conditions set the price on Milwaukee's milk supply. No formulas or cost of production figures are used. Present low price necessitated by condensery overflow.

⚜

Producers and dealers meet each month and agree upon a price. Fair dealing and mutual confidence make frank discussions possible.

⚜

Plant for handling surplus puts "kick" in Association's arguments. Takes care of milk which formerly cut the prices.

⚜

System of bartering and of keeping surplus off the market makes expensive milk strikes unnecessary. Association's work makes its members ten cents on each can of milk—it costs one cent.

Then and Now in the Feed Business

F. L. CLARK, IOWA

THROUGHOUT the Middle West today abandoned mills in picturesque settings on streams and rivers invite retrospection. They have outlived their usefulness. The stone ones are weathering the years and combatting the ravages of old Father Time pretty well. The frame mills which were far more common than those built of rock are tumbling down. Many have entirely disappeared or are just a heap of rubbish. Poke around in the ruins and you'll find nine times out of ten the great old granite buhrs which did the grinding in all the primitive mills. They were too heavy to move, so have been left by the roadside to tell to this generation and generations to come the story of the old, old days when every middle west farmer had to haul his grain miles over the prairie and through the timber to have it ground into flour for his family and feed for his stock.

In pioneer days "going to mill" was one of the hardest and most expensive features of farm life. Days were often consumed in long journeys over rough trails, through bogs, and across turbulent streams in going to and coming from mill. Besides, the millers extracted heavy toll for grinding. They were the autocrats of their day. But no more. True, a few of the old time mills are still grinding some feed, but their business wanes. Just now the rapidity with which the power feed grinder is being put on the farm suggests that the very last one of these small mills may some day have to close up shop.

One may visit farm after farm on most any of the main roads of Iowa, Illinois, and other corn belt states and receive the answer "yes" far more times than "no" to the question, "Are you doing your own feed grinding?"

More often it is the tractor which is belted up to a grinder. One farmer whom the writer knows has built a small "tractorage" and set up a feed grinder and bin in the front of it. When the tractor is not doing field work it stands in the little building right next to the grinder. When feed is to be ground, all that is necessary is to adjust the belt and step on the gas. If not a tractor, almost every farm nowadays has a gas engine of some kind. It does a variety of jobs, one of which is sure to be feed grinding.

Not all of the business of the small feed mill, however, probably will be done on the farms. A part of the small feed mill business has gone to the big milling centers and will stay there in all likelihood. The farmers, indeed, even with the widespread practice of power grinding at home, are becoming more, instead of less, dependent upon the mills. The reason is that they are all the time feeding more as the gospel of feeding cattle and hogs to get maximum returns spreads.

The "balanced ration" which brings the high tests cannot all come from the farm no matter how efficient the power grinder is. The mills, to meet this new demand, are preparing rations in accordance with tested formulas worked out by experts. And as the feeds become better the farmers are buying more, in addition to the purchase of the cottonseed and oil meals.

"I used to think K—— was a fool to haul out all that feed," a certain Iowa farmer said a year ago." K—— was an up-to-date dairyman who had learned the value of feeding. Soon after, the man who had made the comment joined a cow testing association. Now he isn't calling K—— a fool but is hauling feed himself.

This same thing is happening wherever testing is practiced. But how to buy these prepared feeds and the concentrates and keep down feeding expense in proportion to the greater cash returns is a problem which the farmer needs now to work on. If he does not keep an eye out to economical buying, he may find he eats up all his profits "hauling feed" just as his father did in the old "going to mill" days.

Many cow testing associations are cooperatively at work on the problem of keeping down feed costs. One way they are finding is to buy in carlots direct from the mills, thus keeping in their pockets the dollars which otherwise would have found their way to the bank account of the middleman.

Fundamentals of Tractor Engine Cooling

R. U. BLASINGAME, Pennsylvania College of Agriculture

RED hot engine parts cannot be lubricated. Therefore, the tractor engine must be cooled to be properly lubricated.

When the explosion occurs in the engine cylinder the temperature may run as high as 3000° F. This temperature would heat the valves, piston, piston rings, cylinder, and wrist pin red hot. If oil were applied to such red hot iron it would be consumed immediately. Correct cooling then is the first essential to correct lubrication. Thus, cooling is an essential feature in the efficiency of a tractor, automobile truck, or any other internal combustion engine. Cooling, then, is not one of the essentials for the engine to run, but is necessary to maintain the engine when it is in operation. It will be remembered that the only essential features for a gas engine to operate are (1) the formation of a combustible gas which is drawn into the cylinder, (2) the compression of that inflammable gas, (3) the ignition of the gas, and (4) the exhaust of the burned gases. These are the necessary features for getting power out of gasoline, kerosene, alcohol, turpentine, natural gas, or any other fuel. There are several features necessary to maintain the tractor engine when it is in operation, which are: (1) cooling, (2) lubrication, and (3) speed control or governing.

Cooling Systems

There are two common methods of cooling gas engines: (1) air cooling and (2) liquid cooling. As the air cooling method is rarely used for cooling tractor engines, the liquid cooling systems will be discussed in this article.

There are two types of liquid cooling systems: (1) the thermosyphon and (2) the circulating pump. Both of these systems employ a cooling jacket around the engine cylinders through which a cooling liquid circulates. When the engine is in operation a part of the heat from the explosion of the gas within the cylinder is absorbed by the cylinder walls and other engine parts. The liquid in the cooling jacket of the engine takes up the heat from the engine. The hot water then flows to the radiator where it is cooled by a blast of air passing through the cells of the radiator. It is the method of circulating the cooling liquid in the cooling system from which the two terms, "thermosyphon" and "circulating pump" come.

THERMOSYPHON. In the thermosyphon system, the cooling liquid remains still in the cooling system until the engine is in operation long enough to cause the water around cylinders to become hot enough to rise to the top of the radiator. The liquid circulates by the principle that hot water

(Continued on page 20)

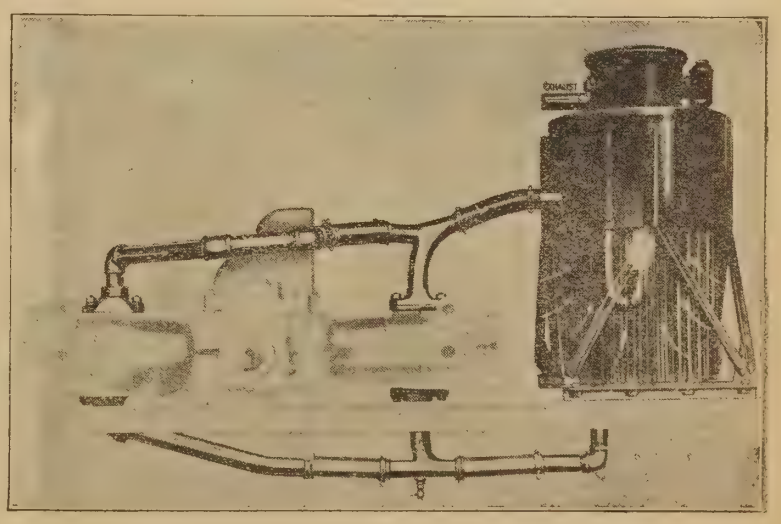

FIG. 1. THERMOSYPHON COOLING SYSTEM

The air draft between the tubes of the radiator is created by the exhaust through the tap of a casing around the radiator.

Perpendicular Pastures

An Enthusiast on Kudzu Tells His Story

C. F. LEACH, FLORIDA

IN a recent interview Mr. W. H. Hovey, director of the milk plants of the Dairymen's League Co-operative Association, is quoted as saying that "milk is shipped into New York City from distances ranging beyond 400 miles yet all of it could be supplied within a range of 200 miles."

Mr. Hovey's statement is quite conservative. There is no good reason why all the milk used in New York City could not be produced by dairies located within 100 miles of New York and if it were so produced there would be a saving of about 25 per cent of the freight now paid on more than one-half of the milk used in New York. It is also possible to produce milk on the farm so that it could be delivered by the farmer at his milk station for 25 per cent less than he must now charge in order to live and even with this reduction his milk would return him a much larger profit than he now receives.

Having made these rather large claims and somewhat startling statements it is up to me to explain "how come", as we say in the South. Loose talk and empty mouthings never made a gallon of milk or delivered it anywhere at any price.

My answer to your "how come" will be short and it may be utterly incomprehensible to ninety-nine per cent of those who read this article.

Plant Perpendicular Pastures

Now don't laugh. This is not the place where the laugh comes in. There will be no laughs in this article. Perpendicular pastures are not a joke. That dear old baldheaded joker, Bill Nye, used to claim that he once owned and farmed a farm in the mountains of West Virginia that was perpendicular. I have been all through that picturesque country and Bill was not so far wrong at that. Bill's joke was not as jocular as one might think and it is no joke to farm those mountain sides, either.

But I do not refer to mountainsides when I speak of perpendicular pastures. The perpendicular pastures I am talking about are grown on perfectly level ground or where the landscape is gently rolling. It is true that steep hillsides can also be used if necessary but their approach to the vertical will have nothing to do with the perpendicularity of the pastures.

Anyhow, one acre of level land or of rolling land or even steep hillside land will produce three acres of perfectly good pasture, the most nutritious pasturage ever produced. One acre of the three acres of pasture that can be grown on one acre of land as aforesaid can be grown lying down, as you might say. Just like any other pasture. And two acres of the three acres of pasture herein before mentioned can be grown standing up. In other words, there will be two acres of perpendicular pasture to one acre of horizontal pasture on this one acre of land.

KUDZU PASTURE

LANE IN PERPENDICULAR PASTURE

ALLEY JUST FINISHED GRAZING

So far as I know there is but one forage plant in the world that will produce pastures growing at right angles with the surface of the earth and that is the Kudzu vine. Kudzu vines will grow on trees, arbors, trellises, porches, watertank towers, windmill derricks, or anything like that and they will grow on these structures sixty or seventy feet high. Kudzu is some climber. But it will also grow on fences seven feet high and it will run over the ground where the main or stem vines will take root at every joint and throw up multitudinous branches covered with large and luscious leaves and tendrils so that in time the ground will be covered with a mat of hard, woody trunk vines whose lateral branches growing upward, curling and twining together, make a mass of edible vegetation three or four feet deep. The vines that climb on the fences do likewise, only the main or trunk vines do not take root, of course, and the innumerable branches grow out horizontally on both sides of the fence, twining and curling together until the whole fence is hidden with a mass of luxuriant herbage two feet or more thick on each side of the fence.

If you will build two parallel wovven wire fences, seven feet apart and seven feet high, and plant Kudzu roots right under each fence you will soon have a seven foot lane or alley between the fences, covered with Kudzu and each fence will also be covered with Kudzu. Then a cow in the alley can eat off the right hand fence first and that is seven feet of pasture. Then she can eat the seven feet of Kudzu on the ground and after that she can calmly devour the seven feet of herbage from the left hand fence. And there you are. Three times seven are twenty-one, or twenty-one feet of pasture on seven feet of land, three for one or three on one. Just as you like. If you will build twenty parallel fences seven feet apart and about 310 feet long and then plant Kudzu roots, just the way I said, you will have in one year three acres of pasture on one acre of land that will afford the finest grazing from May until frost and keep four cows full of feed all summer.

Incredulous Smiles of Friends

There is no use talking, I do hate to write about Kudzu, it is so hard to write about Kudzu without appearing to exaggerate. I hate to even talk about Kudzu to my best and dearest

(Continued on next page)

Wintering the Brood Sow

CLARENCE M. BAKER, OHIO

WHAT does the brood sow eat during the winter?

Nothing pleases a breeder in the spring more than to have his sows farrow strong, vigorous pigs with plenty of vitality. To accomplish this the feeder and breeder must begin in the fall and winter to care for the sows.

The conditions of wintering a brood sow are so much different than that of caring for her in the summer that wintering is a real problem. In the summer the brood sow has plenty of forage and gets much exercise; during the winter she should have exercise, but of course the forage cannot be provided. The dangers of poor management with brood sows come largely from feeding solely on grain, for sows fed in this manner produce weak pigs of extremely light bone. Corn-fed sows may gain slowly during the winter although their daily feed sometimes is higher than that of others fed supplements with corn.

During gestation sows should receive enough of feed to gain in weight, besides allowing for increasing weight of the developing young. Sows lose weight during lactation, so that ordinarily an increase in weight from 7-10 to one pound daily should be encouraged. This has been found true at the Ohio Experiment Station.

Since corn alone is too fattening and does not supply enough mineral and protein elements, some tankage should be allowed in the ration. Tankage also furnishes mineral requirement. About one-tenth of a pound per day would be sufficient for brood sows receiving a ration of corn in addition to clover or alfalfa hay.

When clover or alfalfa hay is provided less grain is needed, but the benefit of feeding hay to sows is that it induces exercise. Ordinarily, in experiments at the Ohio Experiment Station, the sows consumed about 3 pounds of hay daily per head. This amount supplies the needed bulk to the ration. In addition to the hay and tankage, one pound of grain or concentrates should be supplied daily for every 100 pounds of live weight. This is an easy way in getting at the amount of feed a brood sow should have. If a sow weighs 500 pounds, 5 pounds of grain or concentrates, 3 pounds of hay, and from one to two-tenths of a pound of tankage should be given daily. The hay is supplied in racks from which sows may eat; tankage may be given in troughs.

A RATHER EXPENSIVE BUT LABOR SAVING FARROWING BARN

During the winter sows are both fed and sheltered within, but some inducement should be given to compel brood sows to get exercise.

A satisfactory means of inducing exercise on hog farms consists of keeping the sleeping quarters for the sows some distance from their feeding place so that the sows must travel this distance several times daily. However, if this cannot be done, sows will secure plenty of exercise eating hay from a low rack built for the purpose. Care must be taken in feeding brood sows not to furnish too much corn or concentrates so that they will be full and not care to eat the hay. It is necessary to induce the brood sows to consume the hay.

Of course, there are other supplements for corn in feeding brood sows. Skimmilk is valuable, but skimmilk is more valuable to feed to young pigs than to mature animals. Linseed meal is also adequate in supplementing corn, the sows requiring about the same amount of linseed meal as they do of tankage. However, linseed meal does not furnish mineral elements like tankage.

Oats has been tried at the Ohio Station, for the price of oats is at times such that it may be used to re-

(Continued on page 29)

Perpendicular Pastures

(Continued from page 8)

friends. It hurts me to see them kind of twitch their lips, trying to hide their indulgent, incredulous smiles. It hurts like the mischief when they turn away their heads so that I will not see their eyes and guess what they think. That sort of thing hurts a thin skinned man. It also fills me with pain to think I cannot tell the truth about Kudzu. No one will believe me when I do tell the truth about Kudzu and so I must lie. I lied knowingly and deliberately when I said just now that four cows could be pastured all summer on one acre planted to perpendicular Kudzu pastures. Such a pasture as I have ascribed will easily carry six cows all summer when it is three years old and every year the vines will grow stronger and more productive. That is not all, cows will give a full flow of milk with less grain on Kudzu than on any other forage plant ever grown in this country. I know that all this and more is so, for I have tried it, but I really don't expect others to believe me. Even when I have told but half the truth about Kudzu I must dumbly and miserably watch you smile.

These perpendicular Kudzu pastures are a new thing. They are something we have half discovered and half invented here on Cherokee Farms, but the old style, horizontal Kudzu pastures are not new. They raise and use them all around here. I had one near Lake Erie many years ago. This year and last year we tested the capacity of our old style Kudzu pastures and found that these flat pastures, where we only get one acre of pasture on one acre of land, carried three head of stock per acre from May to October 1. There are many people here who saw these cows on our pastures and will verify what I say.

Where It Came From

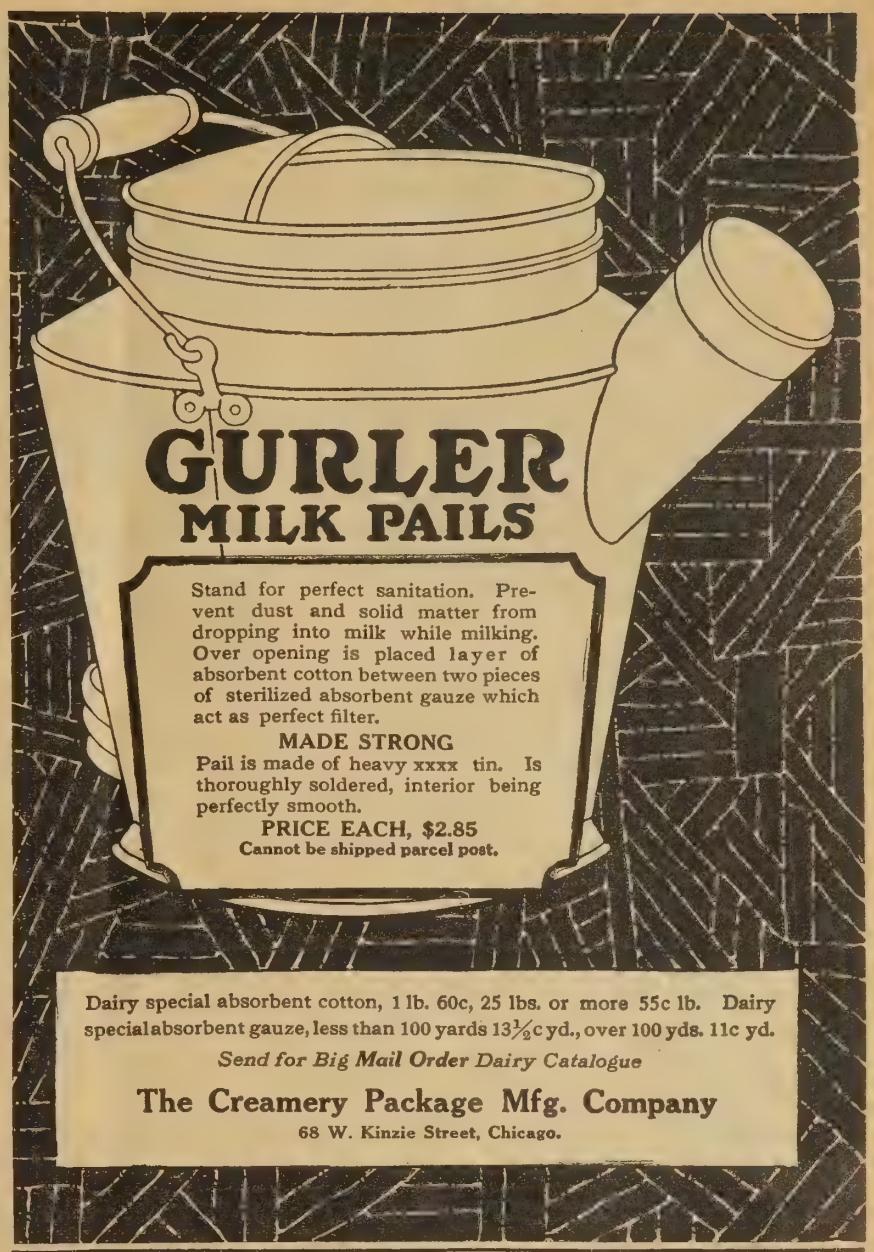
Kudzu is something most of the readers of this article have never heard of and never seen but there are many who have grown it as an ornamental vine on arbors, porches, and pergolas. Many a nice boy has kissed his sweetheart under the sheltering shade of the Kudzu vine. It is a rapid growing leguminous vine. It is said it was first brought to this country from Japan in 1876 to ornament the buildings and grounds of the Centennial Exposition at Philadelphia. I bought some roots from a New York seedhouse in 1898 and grew it in the north for sixteen years.

Kudzu is perfectly hardy and the U. S. Department of Agriculture in Circular 89 says that it grows as far north as Nova Scotia and as far south as Miami, Florida. The Bureau of Plant Industry has a Kudzu meadow on its Arlington Farm in Virginia where they say they have cut an average of five tons of hay per acre for the past five of six years. We cut twenty tons from a four-acre field this year in two cuttings and the third crop is now about eighteen inches high, although we have had two head of stock per acre grazing on it since a few days after the last cutting.

Kudzu is perennial and once planted and well cared for the first year it will last for generations; growing stronger and more productive every year. It will grow on any well drained soil except very light sand. It prefers a clay loam or a sandy loam with clay subsoil and for such a soil it is highly recommended by the Department of Agriculture. After the first year, Kudzu requires no cultivation and no fertilizer. It has a great advantage over most other legumes in that it requires no lime and no inoculating. It is never a pest but on the contrary it will kill out all other plant pests. When Kudzu has once covered the ground, which it will do the first season, it quickly smothers out all other vegetation. It makes an excellent permanent cover crop in orchards affording a fine mulch and adding great stores of nitrogen and humus to the soil.

As a Feed

There have been several official analyses made of Kudzu. These analyses vary from 16.7 per cent to 19.82 per cent protein. If Kudzu contains 19.82 per cent protein then it should be higher in feeding value than alfalfa, clover, or even wheat bran, but analysis does not always show the true feeding value and there have been no official feeding tests. However, all the farmers who have fed the various leguminous forages claim that Kudzu is a better feed than alfalfa, cowpeas, or soy beans.



No one in the North should plant a large area to Kudzu unless they can procure well rooted plants grown in the North. A good start can be made with two hundred roots grown in the South and they should be obtained from responsible growers who will dig them at the right season and pack them carefully so that the roots will not dry out in transit. Any farmer can make a success with 200 Kudzu roots if the roots reach him in good condition, and if he will follow the instructions furnished by responsible growers. From these 200 roots can be grown a large number of seed roots and thus extensive meadows and pastures can be very quickly produced. Write the Bureau of Plant Industry, U. S. Department of Agriculture, Washington, D. C., for a copy of Circular 89, entitled "Kudzu".

[Editor's Note:—A few growers of Kudzu have written very glowing accounts of this legume and we are giving Mr. Leach full opportunity to tell his story. It would seem to be the "Wonder Plant", but its general acceptance and use has made very slow progress. Disappointing results have been secured in some instances and on some soil types, but Professor Piper of the U. S. Department of Agriculture believes good yields ought to be secured over most of the Piedmont of the South. As with all innovations, it is well to start in a small way and try out this plant without going to too great expense.]

SARA OF MOUNTAIN VIEW

Guernsey cow owned by Leslie G. Perry, President of the Idaho Guernsey Breeders' Association. This cow has produced in Class BB 12,843.5 pounds of milk, 608.73 pounds of fat. She misses being a class leader by only 12 pounds. Mr. Perry is an ex-travelling salesman who years ago settled as a pioneer in the new country in Idaho. He has cleared his farm from sage brush, put in an irrigation system, and has a highly developed farm on which alfalfa and other crops are grown. The first cows were grades, which were replaced only a few years ago by pure-breds. During the past season in his first Advanced Registry testing, he has completed a number of very excellent records, that of Sara of Mountain View being representative. These cows were housed in a shed barn and fed as much alfalfa as they would consume and one pound of the following grain mixture for four pounds of milk produced: 200 pounds each of ground corn, ground barley, ground oats, and wheat bran, and 100 pounds of oil meal.

"Dandelion Butter Color" Is Big Prize Winner

Be sure and use Dandelion Brand Butter Color and give your butter that June golden shade which brings top prices —pleasing the eye and tempting the palate.

The High Scores of 1920

In many of the State Buttermakers' Shows, first awards were won by users of old reliable "Dandelion Brand." You can't miss by giving a trial to the butter color which helps 90% of the successful buttermakers of America.

Never gets rancid. **Doesn't affect flavor.**
Doesn't color the buttermilk. **Leaves no sediment.**
Colors more butter to the gallon.

Dandelion Brand Butter Color is purely vegetable and fully meets requirements of all Food laws—State and National. Ask your jobber for prices.

WELLS & RICHARDSON CO., Inc. BURLINGTON, VERMONT

Feed your crops a "balanced ration"

Increasing the yield of a crop by the use of properly "balanced" fertilizers is as natural and practical as increasing the weight of hogs and cattle or the quantity of milk from cows by means of "balanced" feeds.

You can't get maximum results from hit-or-miss methods. Big crops are principally a matter of proper "feeding". Proper feeding is a matter of proper fertilizing. And proper fertilizing is a matter of correct knowledge of soil needs for the particular crops you want to grow. "Any fertilizer" won't do. It must furnish the right food elements in the right proportions at the right time throughout the whole growing season.

Why not put your farming on an efficiency basis? Get *all* the profit. Write to our Agricultural Service Bureau as to the proper fertilizers for your soils and crops. This service is free to you—as a help toward bigger yields, larger income, greater happiness. Also ask us to send you our useful booklet *"How to Get the Most out of Fertilizers"*. No charge.

If there isn't an **A A C** *agent near you, write for the agency yourself.*

Where the Holsteins Lead

HOARD'S DAIRYMAN:—What state has the largest number of pure-bred Holstein cattle?

Answer, New York State.

In what county in New York State may the most of this famous breed be found?

Answer, Madison County.

Located almost in the exact geographical center of the state, Madison County is the veritable Garden of Eden of the Holstein-Friesian breed in the western hemisphere if not in the entire world. What is the reason for Madison County's present leadership in these pure-bred black and white cattle? There are several good reasons, but before I attempt to set them down here permit me to substantiate the points just made concerning leadership, by referring to a recent report issued by the Holstein-Friesian Association. This report states that New York has 83,546 registered Holstein cattle on its farms. Its nearest competitor, Wisconsin, has 58,092 head. Also, New York has more Holsteins within its boundaries than the states of Minnesota, Illinois, Michigan, and Ohio combined.

Madison County, according to this same report, has 7,257 pure-bred registered Holstein cattle that dot its hillsides with animated spots of black and white. It is a typical 100 per cent agricultural county, located just southeast of the city of Syracuse which has been widely advertised as the hub of the Holstein wheel in the East. But Syracuse is not the "hub", it is just a good city in which to stop. The real center of the hub is Peterboro, a little hill hamlet almost in the center of Madison County. Onondaga County, adjoining Madison to the West, and Allegany County in the southern tier, are its nearest competitors, each being credited with 4,153 and 4,642 registered animals, respectively.

The older breeders of these black and white cattle claim that the chief reason why they are so popular in the county is that they have been a profitable breed for the farmers. They also remark with pride, for which there appears to be ample justification, that these high, rolling hills green with luxuriant pastures, with fertile valleys in between, are quite ideally situated for dairy farming, particularly Holsteins. The rainfall is abundant and regular. It is a natural grass and corn country and alfalfa growing in recent years, greatly stimulated by the persistent preaching of the farm bureau agent, is rapidly spreading its roots downward and outward into the limestone soils. Extensive fields of alfalfa and silage corn, and wide sweeps of green hill pastures dotted with black and white cattle. You get the picture? It is another reason.

The first pure-bred Holstein cattle to be brought into the state and kept pure were those imported from Holland in 1869 by Mr. Dudley Miller. These animals were sent direct to Peterboro in Madison County to the farm owned and still operated by Mr. Gerret S. Miller, a brother of Dudley Miller. There were other earlier importations of Holsteins into the state, particularly by the old Holland Land Company, as early as 1795, but these were crossed with the native stock and lost their identity.

The first Miller importation was made up of the three cows and a bull. A second importation, made in 1876, included the bull, Billy Boelyn. This was followed in 1879 by the third and last importation, made by Gerret S. Miller. About this time he disposed of all of his Holsteins except the bull, Billy Boelyn, and the three foundation cows, Empress, Johanna, and Ondine. Today the Miller herd is composed entirely of descendants from these three foundation cows. The only new blood introduced into the herd has come from the purchase and use of bulls of choice breeding. No females have ever been purchased and added to his herd. This practice has been rather unusual but apparently has resulted in a herd of remarkable uniformity from which many notable animals with high production records trace their origin.

In passing, it may be interesting to state that Mr. Miller, himself, has never developed the knack of fitting and feeding for high production records. Most of the excellent producers from this herd have been developed by men who purchased animals from the herd and gave them official records. In this brief sketch space will not permit the tracings of any of the remarkable individuals that have descended from the Miller herd. It is perhaps sufficient to state that undoubtedly much of the popularity for Holstein dairy cattle in Madison County is directly traceable to Mr. Miller's early importations.

Some years ago the breeders organized a county association, but for some reason in recent years it has not functioned as aggressively as one would expect in a county where the breeding of Holsteins has assumed such vast importance. One would ordinarily expect to see such an organization enthusiastically backing a campaign to eliminate disease and build up for the county a wide reputation for healthy herds. Such an effort would in itself widely advertise the Holsteins of Madison County and would go far toward establishing a standard for quality greater even than its present leadership in quantity production. The accredited herd project is looked upon by some of the breeders with suspicion or as some fashionable fad that may not survive the test of time, and this position is held despite some very convincing proof to the contrary in herds within the county that have been for years federally certified as disease free.

In view of the fact that out-of-state buyers are demanding healthy cattle, and that no other agency than the federal government will supervise the testing and certify to the health of the clean herds, it would seem to follow, almost as a matter of good busi-

If You Don't Know

What would be a fair contract price this year for peas or sugar beets, or how to get more and better credit—

You will be prepared to act better upon these things after you have attended the conferences of Badger farmers, at Madison, Wisconsin, February 1—10.

Because—these are two of the important topics that are up for consideration in the big Get-Together Market Conference.

A. W. HOPKINS.

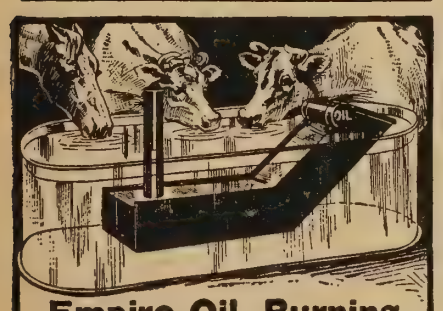
The first pure-bred herd of Holsteins in New York State was developed in this barn in 1869. Although repaired, the original barn still stands and is still owned by Gerrit S. Miller.

Dairy Farmers Wanted--

enormous yields of protein and roughage grown on low priced land

Along the

Seaboard



the south's newest great railway

Florida has many fine herds of dairy cattle—but she needs more dairymen. Milk is selling from 60c. to 80c. a gallon. We have millions of acres of productive land yet untouched by the plow. This land produces from 30 to 100 bushels of corn per acre and you can grow two crops a year. Velvet beans planted with the corn give the equivalent of 16 additional bushels without affecting the yield.

Florida dairymen grow their own concentrates—such as velvet beans—soy beans—cow peas. The silo can be filled any time of the year. Japanese cane yields 20 to 30 tons of excellent silage per acre. Many native hays yield 10 tons per acre. Pasturage can be had the year round. No sheltered barns are needed.

The Seaboard opened up a new prairie country in Florida, Ga., Ala., the Carolinas and Va. that offers pioneer opportunities without pioneer hardships. Excellent roads, model schools and churches, no extremes of heat or cold, quick direct shipment to Northern markets. Write me for information, telling me which State and kind of farming you prefer.

Empire Oil-Burning Tank Heater

Greatest improvement ever made in tank heaters. Fits any tank. Burns from 14 to 16 hours on one gallon of kerosene. Any child can operate it with safety; no sparks, ashes or smoke. The heating chamber is entirely under water; no heat wasted. Guaranteed. Saves feed—pays for itself repeatedly.

Empire Non-FreezableHogWaterer

Made of heavy galvanized iron — large capacity (70 gal.); drinking trough on outside where hogs can reach it; oil burner directly under trough—guaranteed not to freeze. Keeps water warm at a small cost. An abundance of fresh, clean water at right temperature. Keeps hogs healthy, fatten faster on the same feed.

FARMER AGENTS

Special offer to farmers willing to show our Heater and Waterer to prospective buyers. Write at once for price and special offer. Buy direct from factory.

ness, that the county breeders' association could do nothing of greater importance than to aggressively push a campaign for healthy herds. The thousands of pure-bred black and white cattle, for which Madison County is now so well noted, cannot, by numbers alone, uphold and maintain the banner of leadership in the western hemisphere. They must also be healthy cattle.

New York. F. E. ROBERTSON.

A Community Plan

HOARD'S DAIRYMAN:—Two dairymen were talking over the results of their year's efforts. It was in one of those small communities where five or six farmers were clustered together in a kind of community. All were engaged in the same business—that of furnishing cream for a creamery near by. "Trouble with us," said Jim Norris, "we are each trying to go alone."

"Guess you're right," replied Joe Andrews, "I've been thinking about what that county agent fellow said at the grange meeting the other night. I liked what he said about a better sire club. Why can't we take up that idea right here?"

As a result of that conversation, five farmers, whose farms clustered together, had a meeting the next night and planned out a scheme that is well worth following in other communities. These five men kept from fifty to sixty cows in the aggregate, not enough for any one to afford a registered bull of good breeding; also, they had a mixed bunch of cows of all colors and sizes in which, perhaps, black and white stock had the lead. It was decided to go in for Holstein stock. This happened some years ago and now each one of these men has a handsome herd of high producing Holsteins. It was decided that each man should take his turn at buying and keeping a good bull and all the others should pay a nominal figure for service. Lots were drawn to decide who should buy first. He was to purchase a mature bull and have him ready the first of the year. The second man was to have a bull ready for service eighteen months later, and the third at the end of a similar period. The other two were to follow in turn. An agreement was drawn up and signed by the five. In case of death or removal a stated sum was to be paid over to those who had already fulfilled their parts by the agreement, based on the time service had been provided.

By this plan the first man was required to purchase a bull ready for service but the others might buy younger animals and raise them to maturity. This gave a succession of good sires, and, as the period of service was only eighteen months, there was no chance of mating a bull with his daughters. Such a plan does not permit the breeding up of a family along the same blood lines but for small farmers it gives maximum service at a minimum expense. Each one is sure of a good sire for his heifers and he has the expense of keeping the bull only one-fifth of the time.

Since the plan was started, each of the men has bought registered heifer calves, so now there are but few grades in the community and those few cannot be distinguished from the straight stock, except by the examination of papers.

For a small community, we know of no plan that will work out more cheaply than this. It happens that these farms are bunched within a radius of little more than a mile. Of course there would be an objection to driving cows any considerable distance, also this plan is not needed by large farmers.

New Hampshire. C. H. CHESLEY.

Primrose—Motor Driven

A snap of the button and— let there be cream!

THAT is all the work there is to separating with the motor-drive Primrose once the supply can is filled with milk. Electricity takes the place of human energy. The willing motor shoulders this task and turns the separator at the same uniform speed from the beginning of the run to the end.

The motor-drive Primrose is a self-contained power unit and cream separator. Securely mounted on a substantial base which is an extension of the shelf at the top of the separator stool, the economical, tireless motor is ever ready for instant service. A snap of the electric switch—and the separator is put in motion. The motor is completely enclosed to exclude dirt and water.

Where electric power is available on the dairy farm, the motor-drive Primrose must be of more than passing interest to the dairyman. Primrose skimming efficiency plus electric operating efficiency makes an unbeatable combination. See the International dealer.

SEED

By Prepaid Express—Order NOW— Prices Going Up. Our first quality, hardy northern-grown grass seed, famous for its frost and drought resisting qualities. High and strong in germination. Our price about two-thirds below last year, but now tending upward. Order EARLY. We pay all express or freight charges; bags free. Specials: Alsike and Timothy mixed $5.85 per bu.; Alfalfa $12.90 bu.; Medium Red Clover $13.50 bu.; Alsike $16 bu.; Timothy $3.95 bu.; Sweet Clover $4.50 bu.; Sudan Grass 8¼c per lb. As seedsmen of many years experience we have carefully graded and tested these seeds. We guarantee them to be as represented, or your money back. You must be satisfied. We are not connected or associated with any other house selling direct to farmers. Order TODAY or send name for price list and full particulars. **World Seed Company, 123 W. Madison St., Dept. P, Chicago, Ill.**

EDITORIAL COMMENT

THERE are many lessons to be gleaned from our present situation, but one of the most striking things is the prices of our best bred dairy cattle and the highest quality of butter. Animals that have been properly bred, of good type, have not declined materially in price. They are selling readily and for good prices. In a conversation with a man who sells many hundreds of cattle and with a dealer who handles large numbers, it was expressed by them that the slump in prices of dairy cattle has largely come to the poorer grades.

So with butter. On Monday, December 27th, one large creamery concern was paying 64 cents per pound for fat to the farmers. This price could not have been given for an inferior quality of cream, for that company has manufactured the highest grade of butter and has a large demand for all it can make at this price.

These illustrations show that for the man who is willing to strive to produce the finest cattle and the best quality of butter, there is a remuneration. In other words, the men who are informed are as a rule the most successful men in their business.

LOCAL CO-OPERATIVE ENTERPRISES

In these times when much thought is being given to methods of improving the handling and marketing of dairy products, it is well to consider the plan which we have advocated for many years as being the safest and the most satisfactory way for the dairy farmer to market his milk. It seems to us that the ideal plan is for every community to establish a co-operative enterprise which will be capable of manufacturing butter and cheese, shipping of milk or cream, and, in many communities, of manufacturing the various types of skimmilk cheese such as cottage and Camembert. The average man little appreciates the splendid opportunities to develop the various types of cheese and to manufacture the finest quality of butter. To do these things is to enlarge the market for dairy products and this means better prices. When too much of our milk goes into one product there is likely to be severe reverses similar to that which we are experiencing at the present time with condensed milk. But if the farmer will develop a local co-operative enterprise capable of making two or three dairy products of the finest quality and develop a market for them, he is not likely to feel the sting of the decline in the prices of his products. Communities that have co-operative enterprises in operation are not at present suffering the decline in prices of dairy products as are those where the farmers have not established such institutions.

It is our opinion that the solution of our marketing lies very largely in the successful development, in the various communities of a state, of local co-operative enterprises. It would not be necessary for each of these institutions to manufacture the same kind of product, but it should be their purpose to manufacture the very best quality of dairy products possible and then develop a good market for them. When there is a sufficient number of these institutions in any one state, they can be federated and a sales agency established for the purpose of furthering the marketing of their products and to secure better prices for them and to do the work of marketing more economically. An industry built upon successful co-operative units, each one carrying out its plans under separate management, so far as the development of the factories is concerned, is the sensible and substantial way of developing a system of co-operative institutions for caring for milk and its products. Proceeding in this manner is building an industry from the bottom up and not from the top down. These small units educate the patrons to business practices and teach them how institutions like this are financed, and if they follow the business closely enough they get a reflex action from the market and they learn how to take advantage of the market.

At the present time there is a wide variation in the prices paid for butterfat. Some farmers are now selling butterfat as low as 40 cents per pound and we know of one institution that recently paid on Dec. 27th 64 cents per pound for butterfat. In many of the co-operative creameries where all the skimmilk is returned to the farmers, they are paid in the neighborhood of 60 cents per pound for fat. There is too large a difference between 40 cents per pound for fat and 64 cents and it is the farmers who have no co-operative factories of their own that are forced to take these low prices. Not only does the co-operative enterprise owned by the farmer give him control of the manufacturing of his business, but he can through proper organization form a sales agency which will be to his advantage. There are very few co-operative creameries or cheese factories that have attempted to develop special dairy products for the market or have graded their products and sold them under a brand, both of which are highly desirable.

To bring about these ideal results, we believe in beginning by establishing in communities local co-operative institutions and gradually developing them until there is a sufficient number for a federation. There will be strength, economy, and business efficiency in a co-operative plan of this character.

VARIATION IN MILK PRODUCTION

Those selling market milk little appreciate the wide variation in production. This presents to the distributor a problem of caring for surplus milk, for he must secure a sufficient number of patrons to take care of his business when there is a minimum production of milk. This means that in the flush of the season he has about twice as much milk as his customers will demand. It has always seemed wise to us that co-operative enterprises should be established in all communities by the farmers so the surplus milk can be taken care of, as this is a factor in price making and, we believe, has led the producers at times to sell their milk cheaper because the dealer claims he looses heavily upon surplus. If in every community there were established co-operative institutions capable of manufacturing butter or cheese, in short, various kinds of dairy products from a high quality of milk, it would be unnecessary for the milk producer to buy milk from so many patrons. He could then turn to these institutions during the period of lowest production and secure milk for the period of low production. Moreover, he would not only be assured of an adequate quantity of milk for his customers but the farmer would be certain of being in a better position to take care of his own product, which we believe is the desirable thing for the producers.

The milk dealer, in many cases, has provided ways and means of manufacturing the surplus into the various dairy products. This is a wise course for him. Manufacturers of other commodities do not expect their customers to take care of their surplus; they take care of it themselves. In short, we believe the farmer should attempt to organize his business and place it upon the same basis as other enterprises are conducted.

It is perhaps well to consider how much the milk production varies from the same patrons. The Gridley Dairy Company of Milwaukee has 1,700 patrons. In 1919 its lowest milk receipts amounted to 2,200 cans on September 21st. Their highest receipts were 4,500 cans on June 2nd. In 1920 the lowest receipts were 3,100 cans on October 12th and their highest, 5,945 cans on June 7th. It would seem on casual reflection that the consumption of milk would not materially vary but on Christmas Day, 1920, the Gridley Dairy Company had a surplus of 1,000 cans of milk, while on Thanksgiving Day there was a larger demand for milk. There is a variation in the production of milk on the farms of producers during the year, depending upon the prices of milk, feed, and weather conditions. During the year 1920 there has been an increased production of nearly 15% among the Gridley Dairy Company patrons.

These facts present some of the problems which the milk dealers must contend with and explain why the surplus at times becomes troublesome.

LESSONS IN MARKETING

This subject of marketing farm products is claiming the attention of every thinking person interested in the welfare of agriculture. There are certain fundamentals which must be worked out and well established in the minds of the farmers and those in charge of the markets before we can expect to improve our present system.

Mr. E. L. Luther, superintendent of farmers' institutes in Wisconsin, enunciates a few of the essentials in marketing. He states: "A suitable product suitably put up. Farmers should present for sale only such a product as they would themselves buy and the product should be presented in an attractive form. Community production must also succeed individual farm production in establishing a quality product in quantity."

Mr. Luther could have well stated, too, that the farmers must take into consideration the demands, the idiosyncrasies, and the tastes of the consumers. Every good merchant studies what the consumer desires and then attempts to furnish him the product and in a package in keeping with that desire. In other words, the good merchant attempts to please. So must the farmer attempt to please the consumer in the marketing of his product.

Mr. Luther continues as follows: "A knowledge of the cost of the product. No other business in the world than farming could have survived the lack of cost accounting. Farmers should know something of what their products cost them. Farmers must begin to keep accounts."

This is highly essential and there would not be as large a production of certain products if the farmers knew what it cost to produce them. There are sections where milk production has increased as high as 30 per cent or more when the market was scarcely paying for the cost of production.

Again, Mr. Luther says: "Control of the product as far as possible towards the ultimate consumer. This can be brought about through co-operative marketing. Local warehouses co-operatively owned and terminal facilities in central markets must be co-operatively owned and operated."

This means that the farmer must place himself in position to market his products throughout the year and not in the month or two that follows his harvest. This will place him in position to take advantage of the market and he will be following the same practices of business men engaged in other enterprises. It is highly desirable that the farmers have these local co-operative institutions through which they can market their products in an orderly way.

The Federal Farm Loan System

I have read with interest the article on "The Dairy Farmer and the Farm Loan Act". I had a very limited captial when I started, but now have a third equity in my 200-acre farm. I was getting on splendidly until the slump came, but am now sewed up tight. I have no complaint against the local bankers, but the constant anxiety of meeting or renewing the short time loans hampers me. If I could secure $5,000 additional by giving a chattel on about $8,000 of personal property and my $10,000 equity in the farm, I could get along nicely.

Wisconsin. W. P. W.

Under the farm loan act loans are restricted to 50 per cent of the appraised value of the land plus 20 per cent of the insured permanent improvements. No loans are made on personal property.

It might be possible to secure a loan on the above basis as a first mortgage to run over a long period of relatively small payments, supplementing

this with loans secured on a second mortgage to cover the balance needed to properly finance the farm. Talk this matter over with the local banker or money lender, and if they will supply the additional amount take up the matter of a first mortgage loan either with the Bankers' Joint Land Bank, 68 Wisconsin St., Milwaukee, Wisconsin, or with the Federal Farm Loan Bureau, Washington, D. C.

Computing Monthly Wage

How many days constitute a working month on a farm? Would it be right to use thirty days as a base to figure out a rate per day when a hired man wants every other day off? Sundays are not regular working days only for necessary care of stock and therefore board on such a day would be about equal to the duties performed. Is there any law in regard to this?

Oakwood Wis. W. E. H.

Where wages are paid by the month, each day of the month is figured at the same rate, no matter whether it is a holiday or a workday. That is, for the thirty days in November a man would be entitled to one-thirtieth of the monthly wage for each day he is employed, while in December he would be entitled to one-thirty-first of the monthly wage for each day he is employed.

The reason for this is that when wages are set on a monthly basis, it is assumed that consideration is given to the employment or non-employment on Sundays or holidays within the month. We do not know that there is any statute covering this, but it is a matter which has frequently been decided by the courts according to the rule outlined above.

If one is interested in going somewhat further into the general rules applying to the employment of farm labor, we would suggest writing the Agricultural Experiment Station, Madison, Wisconsin, for a copy of their recent bulletin No. 316, entitled, "Farm Labor in Wisconsin".

Selling Cottage Cheese

Do you think it would be practical to make cottage cheese on the farm and sell direct at retail? What would an appropriate printed package cost? The dealers are paying about 10 cents per pound wholesale and selling for 15 cents. Would it pay to wrap the cheese and deliver it for the extra five cents?

Hartford, Wis. F. L.

It is quite practical to make cottage cheese on the farm and sell it direct to consumers. This means, however, that a special trade must be developed and the retailing of the product will represent a considerable expense unless one has some special means of distribution. We doubt very much whether one could afford to make a special delivery of cottage cheese only and do it for five cents a pound, this to include the extra cost of package.

The cups for handling cottage cheese are somewhat expensive and may cost you from two to three cents each. If desired to put the cheese up in prints, the necessary cartons and paraffined paper can be secured for about one cent a package.

We dislike very much to discourage such a project as proposed, but it is our candid opinion that unless a person can make some special arrangement for retail delivery he will find this much more expensive than anticipated. The cost of retail delivery is quite heavy and the only way to reduce it is to have a relatively large volume of business. It is for this reason that the retail dealer in milk can often do this work to advantage, because it represents very little additional delivery cost.

Feed Dry Cows and Heifers

I would like to ask you about the best way of feeding oil meal. Also please make a balanced ration of ground oats, barley, and corn and cob meal. How much bran should a mixture of this kind have? The cows have plenty of alfalfa hay and silage. How much of the ground feed should they have at one feeding? Is there anything gained in feeding ground feed to dry cows and heifers?

Wisconsin. C. D.

Oil meal is best supplied to cows in a grain mixture. Fed separately it may be wasted and the additional work of feeding it alone is not worth while. In feeding calves, oil meal should be mixed with other concentrates and fed dry, not being stirred into the milk as is the practice on some farms.

These cows should have as much alfalfa as they will eat and around thirty or thirty-five pounds of silage per day. Supplementing this with a concentrate mixture of 300 pounds of ground barley or corn and cob meal, 200 pounds of ground oats or bran, and 100 pounds of oil meal or cottonseed meal and feeding at the rate of one pound for each three and one-half or four pounds of milk produced, should give splendid returns. Choice between each pair of feeds listed together may be made on the basis of their market value. It may be that cottonseed meal will give somewhat better results than oil meal since there are two other rather laxative feeds in the ration—alfalfa and silage.

Dry cows should have enough grain in addition to roughage to keep them in good condition and prepare them for their milking period. Many good feeders hold that the grain given cows at this time gives even greater returns than that furnished it any other time in the year. It will pay to feed yearling heifers grain in their ration and keep them growing as rapidly as possible. It is not necessary that they be maintained in high flesh, but it is necessary to see that they make a vigorous growth.

Re-ringing Bull

How can I re-ring my bull, the web of his nose has worn through. It is very necessary that I have a ring in his nose as he is three years old and not safe without one.

Alpena, Mich. A. M. H.

Some time ago one of our subscribers sent us the following description of his method of ringing a bull where the old ring had torn out:

"I had a case of this kind with a large bull I was caring for a few years ago. I put the ring back the other way of the nose, going through nose and lip and coming out of the mouth. I used a large ring (3"x½"), thus reaching well above lip where flesh was thin.

"It was quite a difficult job to hold the animal while hole was cut through the nose. We used a staff to handle him same as before and with apparently equal results. The ring gradually works down in nose, but we could see no change in position in lip and do not think there would be a material change in a few years or any difficulty in handling bull with ring through lip alone should ring come entirely out of nose. I would not advise tying direct to ring. While this method would probably make grazing difficult, it did not bother bull to eat hay and grain."

We have known of other instances in which men have run two small rings on either side of the nose and through these fixed a third and larger ring by which the bull was actually led. There is, however, no wholly satisfactory method of re-ringing a bull, but in cases of this kind one must accept the best substitute available.

Have any of our readers had experience in successfully meeting this trouble?

Small Diameter Silo

Have any readers of Hoard's Dairyman had experience with silos as small as eight feet in diameter? My silo is too large for summer feeding and even a ten foot silo would be too large, I think, for a herd of eight cows. In winter when we feed all the young stock, and sheep, then our twelve-foot silo is the right size. In summer we only feed the cows giving milk and it is unsatisfactory to feed out of a twelve-foot silo. I would like to hear from some one who has had experience. Last summer when in Oregon I saw many small silos and they say they are satisfactory. They use silos as small as five feet in diameter. That was in Clackamas County where the winter is wet and I was wondering whether that wet weather helps to keep the ensilage.

Kalma, Iowa. D. B. S.

A silo of eight feet or less in diameter should properly keep silage. The experience in Oregon which is recited would hold quite as true in other states and we do not feel that the atmospheric moisture would have any effect upon the relative keeping quality of the silage. Indeed, in those sections, grasses or legumes are quite largely used for silage and we would expect corn silage cut at the right period to keep fully as well, if not better, in Iowa than the other type of silage will keep in Oregon.

What experience have the readers of Hoard's Dairyman had with small diameter silos?

Abundance of Feed

HOARD'S DAIRYMAN:—The ultimate source of the various constituents of the milk is the feed and if copious milk production is to be expected liberal feeding must be practiced. A good producing cow may give large yields of milk for a time when poorly fed but to do this she must draw on her own body for the nutrients necessary for the process. The stores of nutrients in the cow's body are not inexhaustible and when they reach a certain degree of depletion milk production must be decreased.

As an example of this take the case of a 1,250-pound cow producing 40 pounds of 3.0% milk daily. Her requirements for maintenance and production, according to the modified Wolff-Lehmann Standard, would be as follows:

	Digestible nutrients	
	Crude protein, lbs.	Carbohydrate equivalent, lbs.
Maintenance	.88	9.03
Production	2.08	9.36
Total	2.96	18.39

The required nutrients can be provided by a ration outlined as follows:

Feed	Amount	Digestible nutrients	
		Crude protein	Carbohydrate equivalent
	Lbs.	Lbs.	Lbs.
Corn silage	40	.44	6.64
Alfalfa hay	12	1.27	4.92
Cracked corn	4	.28	3.08
Ground oats	3	.28	1.82
Wheat bran	3	.38	1.45
Cottonseed meal	1	.37	.41
Total	73	3.02	18.32

Such a ration will maintain the animal and allow her to produce her 40 pounds of milk per day.

If the three pounds of wheat bran and one pound of cottonseed meal be taken from the ration the nutrients will be reduced to 2.27 pounds of digestible crude protein and 16.46 pounds of digestible carbohydrate equivalent. When the maintenance requirements are taken from this there are left for productive purposes only 1.39 pounds digestible crude protein and 7.43 pounds digestible carbohydrate equivalent.

This will be enough protein for the production of 27 pounds of milk and enough carbohydrate equivalent for the production of 30 pounds. The production of the cow would, therefore, be reduced to somewhere between 27 and 30 pounds of milk per day. The decrease to this point would not be sudden, as the cow generally would draw on her own body nutrients for a time. Ultimately, however, the reduced ration would result in decreased production.

The main point to consider, however, is economy of production and for this purpose the feeds used may be taken at the following prices:

Feed	Price per ton
Corn silage	$ 8.50
Alfalfa hay	25.00
Cracked corn	48.00
Ground oats	35.00
Wheat bran	48.00
Cottonseed meal	70.00

With the feeds at these prices the cost of the daily ration will be 42 cents when the cow is on full feed and 31 cents when she is not being fed to capacity. If a value of $3.00 per 100 pounds be put on the milk the daily returns will be $1.20 when the yield is at its best and only 81 cents when the cow has decreased in production owing to insufficient feed. In other words, when the cow is properly fed the returns over feed cost at the prices used will be 78 cents, whereas, only 50 cents will be left after paying for the feed when the ration is stinted. A clear gain of 28 cents per day is available through liberal feeding in this case.

The greater the amount of feed a cow uses for milk production the less will be the relative importance of her maintenance requirements when considered as a part of her whole ration. Consequently, the more feed over maintenance requirements that a cow can be induced to consume and convert into milk and butterfat, the greater and more economical will be her production. Liberal feeding, when wisely practiced, gives the most profitable returns. A. C. McCANDLISH.

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Coming Events

Jan. 24 to 29—Grain Show by the Wisconsin Agricultural Experiment Station, La Crosse. E. D. Holden, Ass't Secretary.

Jan. 27-28—Southern Wisconsin Cheesemakers' and Dairymen's Association. Secretary, Henry Elmer, Monroe.

Feb. 1-4—Manitoba Dairy Association will meet at Fort Garry Hotel, Winnipeg. Secretary, L. A. Gibson, Winnipeg.

Feb. 1-10—Mid-Winter Farmers' Course, Madison.

Feb. 1-10—Wisconsin Live Stock Breeders' Association, Madison. Geo. W. Davis, Secretary, Madison.

Feb. 4 & 5—State Live Stock Judging Tournament (roundup), Madison.

Feb. 7-12—Sixth National Tractor Show to be given in Columbus, Ohio.

Feb. 15-17. Michigan Allied Dairy Association, Grand Rapids. Secretary, H. D. Wendt, Lansing.

New Ayrshire Roll of Honor Champion

Soapstone Howie's Queen, an Ayrshire cow owned and developed by Delchester Farms, Pennsylvania, has completed a 300-day Roll of Honor record, 15,813 lbs. milk, 695.97 lbs. fat. This makes her champion Roll of Honor cow for 1920. She surpassed her former fat record of 620.72 lbs., which was the Roll of Honor fat record for 1919, this being her second consecutive 300-day Roll of Honor record. Her average for 2 years is 14,860 lbs. milk, 658.35 lbs. fat. She produced two living calves within the year. She has five A. R. records and has produced a living calf every year. She has been a very consistent milker and is again entered on the 300-day Roll of Honor test and is making 68 lbs. daily. She is without doubt one of the best cows of the breed in the country today.

Dairying Thirty Years Ago

Taken from the issue of Hoard's Dairyman of January 16, 1891

The motto of every progressive dairyman should be—Increase the profit by decreasing all needless expense. The price he is to get for his butter the farmer cannot control, but he can control to a great degree the cost of producing it.

⚜

The idea of sharp, practical dairying for profit, and doing it by the aid of the best study and knowledge obtainable is yet a "sealed book" to thousands of farmers who have been fooling with cows for years, and never supposed that it took brains to win in this business.

Make Profit by Making Expenses

A subscriber wants us to mention some of the items of "foolish expense" in dairying that the Dairyman has so often spoken of. Well, the first one is keeping a poor cow. It costs just as much to support the carcass of a cow that is running you in debt as it does one that is giving you fifty dollars a year profit. Not one farmer in a hundred ever tested his cows to know which are the ones that were beating him "out of house and home". How is he to act if he don't know, and how is he to know if he does not put forth intelligent effort to know. There is scarcely a dairyman in the land who is not keeping two cows to do the work of one. Ask any of the progressive dairymen you know and they will tell you that about their first step in cutting down useless expense was to get a better cow. Buy her, breed her, get her any way you choose, but be sure and get her.

2. Stop the expense of bad handling. You must handle a dairy cow not as if she were a steer, but as a bovine mother. You want to make money out of her motherhood; then handle her, shelter her, feed her, and treat her generally as a mother should be handled, sheltered, and treated. If you don't know how a mother should be treated, ask your wife or your mother.

3. Build a silo, so that your milk feed shall cost you less. Build it sufficiently large so you can have ensilage enough to feed in summer and fall when the pasturage dries up. That will keep your cows up to their best flow, so you can have milk to do business with in late fall and winter when prices of butter are higher. That's good economy.

4. Stop this expensive summer dairying—keeping cows on expensive pasture and getting nothing for the milk—just because there are thousands of other men just like you who had rather milk a cow in summer and make nothing, than to go into winter dairying and make a fair profit. Give up all these cranky old notions about dairying, and proceed to measure the business from the dollar standpoint, just as any other manufacturer does.

5. Study to increase the fertility and decrease the acreage of your farm. Make one acre furnish as much food for cows as two acres did formerly. Sell or give away the other acre and thus save the expense of farming it. Remember, everything costs.

6. You must have an albuminoid feed, such as bran, oats, linseed meal, cottonseed meal, etc. Study how to avoid buying this feed, and see if you cannot raise it in the shape of clover nicely cured, and particularly peas. No finer feed on earth for a butter cow than a certain portion of pea meal every day. Look into this pea culture and see if you cannot learn how to grow peas sucessfully. There are many other fine points that we have not time or space in which to enumerate.

In short, make fine, close study of your business and all its finer economies. Don't think it a cheap business, requiring but little brains or intelligence. You are dealing with the mysteries of animal life at every turn, and that is one of the biggest problems on earth.

Ohio Farmers to Meet

The ninth annual Farmers' Week of Ohio will be held at the Ohio State University at Columbus from January 31 to February 4. At that time nearly a score of the principal state agricultural organizations will hold their annual meetings and the latest information regarding farm and home problems will be offered by 150 farmers and college and experiment station workers.

Last year's record attendance of 6,000 farmers is expected to be exceeded.

In addition to the speaking program and the organization meetings, several shows will be held. One is the annual Ohio State Corn and Grain Show. Another will be a big display of different types of farm water supply and home lighting systems. These will be tested for efficiency much the same as the tractors have been during previous Farmers' Week programs. A cattle and horse show will be combined with judging demonstrations.

On the animal husbandry program, Monday will be dairy cattle day; Tuesday, sheep day; Wednesday, horse day; Thursday, swine day; and Friday, beef cattle day.

On the crops program, Monday will be given over to a discussion of sweet clover, Tuesday to soy beans, Wednesday to crop rotations and special forage crops, and Thursday, to better seeds.

Among prominent speakers from outside Ohio will be Signora Olivia Agresti of Rome; Daniel Dean, New York; John M. Evvard, Iowa State College; L. F. Graber and Emil Truog, University of Wisconsin; W. F. Handschin, University of Illinois; J. R. Howard, president, American Farm Bureau Federation; Frank I. Mann, Illinois; H. W. Riley, Cornell University; Mrs. Ruby Green Smith, Cornell University; E. B. White, Virginia; and W. D. Zinn, West Virginia.

New England Holstein Club Organized

January 6 Holstein breeders from the New England States met in Boston and completed the preliminary organization of the New England States Holstein-Friesain Association. A meeting will be called for the purpose of ratifying the constitution adopted. A directors' meeting was held January 14 at Springfield, Massachusetts, where plans were laid for carrying out the work of the new association.

At the January 6 meeting Professor W. M. Ryder, in charge of extension work for the National Holstein-Friesian Association, met with the breeders and submitted the constitution which was adopted. The meeting voted in favor of making $5 the minimum annual fee of the association, this fee to extend over a period of three years.

F. M. Peasely of Connecticut was chosen president; T. E. Elder of Massachusetts, secretary; and L. E. McIntyre of Maine, treasurer.

G. G. Summers, Senior dairy student in the University of Tennessee, is the winner of the $200 scholarship awarded to the most worthy student specializing in dairying in that institution. The scholarship is offered by the Security Mills & Feed Company of Tennessee.

ADDINGTON QUEEN 3D

Ayrshire cow owned by W. P. Schanck of New York. She has lately completed a record of 19,221 lbs. milk, 731.69 lbs. fat.

New York Holstein Association Holds Meeting

A YEAR ago the New York Holstein Breeders' Association did not exist. Today it is a going concern with approximately 1,200 members, and a live wire secretary, E. E. Zimmer. It was organized early in 1920 and to date the big work of its secretary and officers has been to get it in shape to really accomplish something. Plans have been laid which will put the Empire State in the position which she should have in the Holstein world.

The association's annual meeting at Rochester, January 11, was an eye-opener to anyone who thought that the breeders of the state were not interested in their association. Approximately 150 members, representing all sections of the state, were in attendance. They were there for business and, before the meeting adjourned, there were just enough fireworks to clear the air and give assurance that everyone present was interested in the future of the association.

President H. V. Noyes made a general report of the work that had been attempted during the past year. He said that if New York wished to take her position as one of the leading organized Holstein states, if she wishes to make her bid for Holstein business from other sections, she must first set her own house in order. With that end in view the efforts of the association officials have been beyond the work of getting the association in working order, to forward the accredited herd plan, and encourage breeding for type as well as production.

He described the work of getting together New York's National Sale consignment, one which proved a decided credit to the state and brought to the state association a very satisfactory financial return.

Secretary E. R. Zimmer reported the work of the secretary's office and made some excellent suggestions for future work. He favors strong co-operation of the state association with the county organizations. A speakers' bureau has been established to furnish speakers for local meetings. Mr. Zimmer suggested enlarging this to include at least one speaker from each county. One of the arguments advanced for the organization of the state association was that it could be of very considerable assistance in increasing private sales of cattle. Such work by a state organization must of course be limited but Secretary Zimmer pointed out that more could and should be done, largely by working through the local association.

To date the directors of the state association were elected without particular reference to their geographical location, but this year Mr. C. F. Bigler introduced a plan of dividing the state into 11 districts with a director from each. This brought out considerable opposition and the fireworks of the meeting but when the smoke cleared away the plan was adopted with the breeders from the various districts electing their own directors.

The 1921 directorate is composed of Harry Yates, R. E. Chapin, D. M. White, Paul Smith, C. F. Bigler, Geo. N. Smith, F. M. Jones, A. W. Brown, E. J. Chaffee, N. V. Lasher, and H. L. Stafford.

Another change was made in the membership fee. The change makes $5 the minimum fee with a charge of 50 cents per head for pure-bred females over a year old and 10 cents per head for grades owned by members. Furthermore, in those localities where there are local associations it is provided that if the local association has 100 per cent of its members state members, 25 per cent of the membership fee from each member is turned back to the local association, 50 per cent to 100 per cent nets the local association 10 per cent of the membership fee, and 25 per cent to 50 per cent, 5 per cent of the fee.

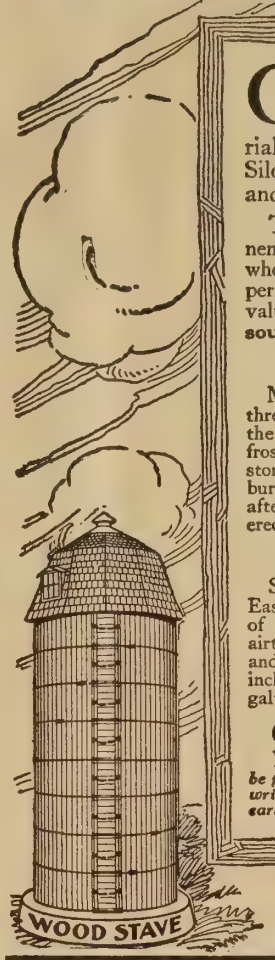
The banquet in the evening brought out approximately 250 members and their wives and carried with it one of the most interesting and entertaining programs we have ever listened to. W. F. Schilling of Minnesota and D. W. McLaury, head of the New York Bureau of Animal Industry, were the principal speakers with President H. V. Noyes as toastmaster.

Mr. Schilling spoke on "Co-operation for the Dairyman and Holstein Breeder", using as an illustration the work done by the Twin City Milk Producers' Association, of which he is president.

Dr. McLaury spoke of the work being done to fight tuberculosis among the dairy herds of the state. He asked for more co-operation from association members, telling them very plainly that such a course was a vital necessity if they wished New York to take her proper position among Holstein states.

59 Waukesha Holstein Bulls Average $179

Fifty-nine animals were sold in Waukesha County's second annual Holstein-Friesian bull sale, January 12. The average price was $179. Most of the consignments were in sale shape and of acceptable conformation. A few were faulty in type and brought low prices in consequence. A greater factor in keeping bids down was the lack of high records close up in the pedigrees, for the choice animals sold well.



From the beginning it was clear that the crowd was not bull hungry. Apparently all had lost their taste for herd sires, except as tempted by unusual breeding and individuality. A number of very good young bulls sold well below their worth. Not only was the demand poor but the readiness with which breeders had offered consignments for the sale indicated bulls have not been selling freely recently.

H. E. Dickenson topped the sale with Dicmere Korndyke Creation, a son of Creator, which brought $1,500. This six-month-old calf is out of Pabst White Clover 2d, a "19.15-lb. two-year-old" and a sister to the $30,000 heifer, Pabst Korndyke Cornflower. This was the only son of Creator which was offered. E. C. Rogers of Connecticut was the buyer.

The second highest bull was a yearling son of Sir Pietertje Ormsby Mercedes 43d, consigned by J. J. Reid & Son. He is out of Ashburn Hengerveld Dora, a "thirty-pound cow". He went to Geo. J. Schuster of Wisconsin for $1,250.

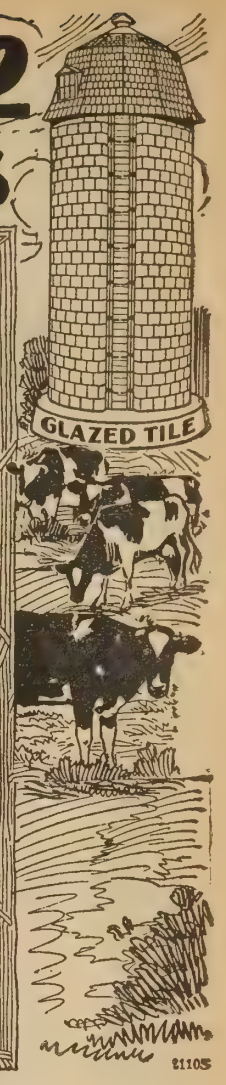
E. C. Rogers also took Summit Alma Mercedes, a "16.48-lb" son of Sir Pietertje Ormsby Mercedes 41st, consigned by Hollyhock Farms, paying $700. The only other bull to reach the $500 mark was an "18.16-lb." yearling consigned by Williams Bros. and taken by the Connecticut buyer.

Kalamazoo
"The Worlds Standard"
TILE AND WOOD SILOS

CONSIDER the name. It means America's standard—positively superior in material and construction. It means Silo satisfaction for your lifetime and generations to come.

The Kalamazoo Silo is a permanent, profitable investment, and whether you choose wood or the more permanent tile, you are sure of extra value for your money. **It is one sure source of farm profits in 1921.**

Glazed Tile Silos



Made of hollow tile blocks having three dead air spaces—as "permanent as the Pyramids." Substantial reinforcing, frost-proof, moisture-proof, acid-proof, storm-proof, vermin-proof, and will not burn. Continuous door-frame galvanized after assembling. Will not rust. Easy to erect and require no paint or repair expense.

Wood Stave Silos

Shipped complete ready to set up. Easy to erect—no nails or screws—choice of 4 well-seasoned time-defying woods—airtight joints deeply grooved, tongued and splined. Valuable exclusive features include continuous doors, steel door frame, galvanized after assembling.

Order Your Silo Now

Your Kalamazoo shipped now may be put up before the busy days. Don't wait—write today for our special proposition to early buyers. We will save you money.

DAIRY, HORSE AND HOG BARN EQUIPMENT

DREW Steel Equipped Barns

OUR 22 YEARS EXPERIENCE IS AT YOUR DISPOSAL

DREW—THE LINE OF EXCLUSIVE FEATURES

Better Barn—Better Cattle

Drew equipped barns are better barns. Drew fixtures decrease labor—increase profits. Drew—*the line of exclusive features*—cost no more than others. Twenty-two years' experience backs each of these exclusive features. Read them:

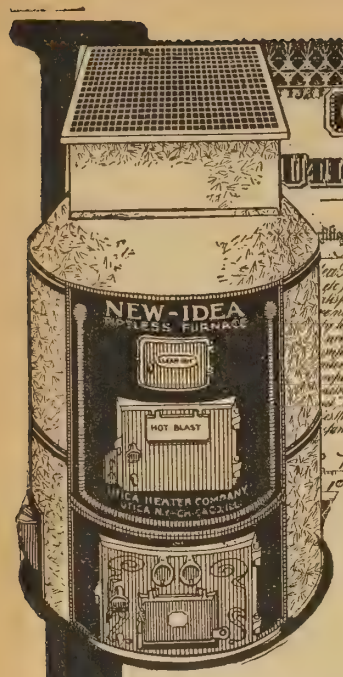
Drew Stalls and Stanchions 1. Double swinging sure stop. 2. Spring Cushion Bottom. 3. Indestructible stall-posts and partitions of rolled steel. 4. Double sure-lock stanchions. 5. Adjustment device for any neck size. 6. Simple alignment device.

Litter Carriers 1. Four lift chains. 2. Double rolling shaft lift. 3. 11" extra lift over any other. 4. Hollow tubular track, forming the only perfect track-cable connection. 5. Heaviest load easily lifted with one hand.

Water Bowls 1. Double Gravity Lock. 2. Reinforced castings. 3. Brass valve construction. 4. Smooth inside surface. 5. Double pipe strength at bowl. 6. Easily and quickly installed.

Pens Bull—Cow—Calf—Hog. All of best rolled steel. Strong—easy to clean. They keep your herd at top notch all the time. We also make Feed Carriers, Bull Staffs, Ventilators, Feed Trucks, Hay Tools, Door Hangers, etc., etc. Drew Fixtures last—they are practically indestructible.

Free Barn Floor Plans



We maintain a department of experts in planning, designing, remodeling, and building dairy and hog barns. Our 22 years of experience is at your disposal. Write and tell us how many head of live stock you handle—our advice, suggestions and barn floor plans free.

THE WONDERFUL NEW IDEA PIPELESS FURNACE
ORIGINATED AND MANUFACTURED BY
UTICA HEATER COMPANY
UTICA, NEW YORK
(INCORPORATED 1889 UNDER LAWS OF STATE OF NEW YORK.)

This certifies that Frank C. Edwards of Jamestown, N.Y. has purchased one Pipeless Furnace and when properly installed, under suitable conditions, as per the manufacturers' Utica Heater Company, Utica, N.Y. directions, will heat the following described dwelling, viz.: Factory working of said heater is not satisfactory for purposes agreed to below, it is to be repaired, installed or removed at the option of the purchaser, and when so ordered by the purchaser, the Utica Heater Company agrees to make such repairs and changes as may be necessary to make said heater satisfactory for purposes agreed to below, or remove the same at the option of the purchaser, and refund to the purchaser the amount paid for said heater and all expenses incurred by the purchaser in connection with the installation of said heater. To the Utica Heater Company agrees to make such repairs and changes as may be necessary to make said heater satisfactory for purposes agreed to below, or remove the same at the option of the purchaser, and refund to the purchaser the amount paid for said heater and all expenses incurred by the purchaser in connection with the installation of said heater. To

This Guarantee Protects You Absolutely

This money-back guarantee of satisfaction takes all the chance out of buying a New Idea Pipeless Furnace. If you are not satisfied that the New Idea does what we say it will, your money will be refunded promptly. It is so stated as plainly as we could write it right in the guarantee.

The New Idea dealer will show you this guarantee. Read it carefully before you order, but order now for lower prices again prevail. Have him explain also the

Many Advantages

of the New Idea which account for the low fuel consumption but high-heating quality of this furnace.

Ask him about the:—Hot-Blast Feed Door—Cup-joint Construction—Gas and Dust-tight Radiator—Exclusive Frameless Feed Door which prevents gas and dust and dirt, etc.

Write for catalog and name of nearest dealer if you don't know it. Expert heating advice, free.

Utica Heater Company

Box No. 25 **UTICA, N. Y.**

Farm Lighting

(Continued from page 9)

forced through a U tube and then out of a very small opening about the size of a small pin hole. The operation is substantially as follows: When the light is wanted a torch of some kind, generally asbestos soaked in alcohol, is lighted and held under the U tube for a few minutes. As soon as this tube becomes hot the gasoline valve is opened and the gasoline, now in the form of a gas due to the heat of the tube through which it has passed, is forced through the pinhole above mentioned. This gas is forced to pass through the air before it enters another tube leading to the mantle and in this way combines with air enough to allow it to burn. After the burner has been generated the heat of the flame keeps the vaporizing tube hot.

With a good grade of gasoline, that is, one that will vaporize easily and completely, very little trouble will be experienced with this kind of an outfit. The quality of gasoline is sometimes indicated by giving its specific gravity and again by speaking of it as having either a high or a low test, the high test being the better grade. The specific gravity of good gasoline should not vary much from .66.

During the last few years the demand for gasoline as a fuel for internal combustion engines has had a very important bearing on the quality of the product. It is not very long ago that the very best grades of gasoline could be had for six to eight cents a gallon. At that time kerosene was what the refiners wanted while gasoline was a by-product. With the gradual passing of the kerosene lamp, especially in the cities, the demand for kerosene has fallen off while the demand for gasoline has increased by leaps and bounds. The natural result is that many of the less volatile products of petroleum are now turned into gasoline with the result that gasoline is becoming poorer and poorer. The ordinary gasoline of today has a specific gravity of .75 or even more.

It might be well to state at this point that gasoline gas will not explode or burn unless it is mixed with air. The explosive and burning range of average gasoline vapor varies from 12 parts of gasoline mixed with 88 parts of air to 6 parts of gasoline mixed with 94 parts of air.

If the burner is properly constructed and in good working condition the volatilized gasoline mixed with air will burn with practically no smoke or odor and with very little light but with intense heat. The heat of this flame causes a mantle of some sort to become incandescent and this hot mantle gives a soft and quite powerful light.

As a general thing lighting plants of this sort are supplied with two pressure tanks which are arranged in such a way that one of the tanks may be filled while the plant is in operation. This is a decided advantage over the single tank type where the pressure must be allowed to go down and necessarily the lights to go out before the tank can be filled.

Hand lamps and lanterns using gasoline as fuel are used quite extensively. They give an excellent light and are probably no more dangerous than any other lamps that use a liquid fuel. It has been said that "the price of safety is everlasting caution" and the truth of this saying is nowhere better exemplified than in the handling of gasoline lighting outfits. When used and operated according to directions they are entirely safe but it is impossible to make them fool proof.

One of the annoying features of this kind of lamp is the regularity with which the pinhole, through

Wichita Dallas St. Paul Los Angeles Toledo Chicago

which the volatilized gasoline escapes, becomes clogged. This clogging is due to the accumulation of non-volatile particles which are present to some extent in all gasoline and to quite a large extent ir the poorer grades.

To obtain the best results with a gasoline light, the better grades of gasoline should be used and they should always be strained through chamois skin. Most of the lamps now on the market are equipped with some sort of a cleaning device which enables one to clean out the small orifice at will and generally while the light is burning. There has recently been offered for sale a gasoline lamp which lights with a match. This is a decided improvement over the older types.

One of the objections to lamps of this kind, that is, the forced feed type, is the noise. When the volatilized gasoline escapes from the pinhole it produces a more or less loud hissing noise which is very annoying to some people. This fault will in all probability be overcome in due time.

⚜

Blau-Gas

Blau-gas is a product which takes its name from the man who discovered a method of liquifying it. This gas is made from gas or petroleum oil which is crude petroleum with some of the more volatile constituents taken out. The oil is volatilized in clay retorts by means of heat. It is then freed from tar, ammonia, and other things which might be considered impurities.

As the gas goes into the gas holder at the works it is much too bulky to be shipped from place to place so it is liquified and placed in steel cylinders for convenience.

Gases of all kinds may be compressed but not all of them may be liquified. For instance, city gas, or, as it is more commonly known, coal gas, can be reduced to a liquid. Coal gas is made up very largely of carbon monoxide which is a gas that will not become a liquid under any known conditions. Thus when Blau-gas is liquified the carbon monoxide and other gases which will not liquify are literally squeezed out. In the process of liquifaction a pressure of about 1,600 lbs. to the square inch is used and the temperature is reduced to about 50 degrees below zero. The liquid gas is sold and shipped in strong steel cylinders holding about twenty or twenty-five pounds.

Blau-gas is very rich in heat units due to the fact that most of the poorer gases are eliminated during the process of liquifaction. One cubic foot of Blau-gas contains about 1,800 British thermal units as compared with 600 in a cubic foot of ordinary city gas. Another good feature about Blau-gas is that it is practically non-asphyxiating. The danger in city gas and in the gas escaping from coal stoves and furnaces lies in the high percentage of carbon monoxide which they contain. Blau-gas is explosive of course but its explosive range is much lower than most other gases.

Blau-gas outfits consist of a steel cabinet containing the devices for reducing the pressure and the necessary gauges, valves, etc., and a large steel tank which is the expansion tank. The full cylinders are attached to the proper connections and the bottle valve is opened so that the gas may enter the large expansion tank. The liquid gas returns instantly to its gaseous state when the pressure is reduced so that the expansion tank contains no liquid. The pressure is kept at about 40 or 50 pounds per square inch in the expansion tank and again reduced to about 6 ounces where it enters the house pipe.

Since neither heat nor cold has any effect on Blau-gas the tank and cabinet are always placed out of doors. Open flames of all kinds must be kept away from the plant. In ordinary use the plant will require about two minutes time each day to see that the pressure in the expansion tank is kept up to normal.

Blau-gas in common with other gases, is harmful to house plants, so it is important that the piping and valves be gas tight at all times. The ordinary gas plant uses two cylinders at a time, one being connected and the other being in reserve. The consumer pays the freight both ways on the gas receptacles.

WHAT
Do *you* put in *there?*

FEED, yes. But—WHAT KIND is it?

AT the fairs and dairy shows, many of the most successful dairymen tell us they get more dollars' worth of milk out of a dollar's worth of BUFFALO CORN GLUTEN FEED, fed mixed with wheat bran or millfeed, oats, etc., than any feed they know of.

They probably never had anybody offer a reason *why* BUFFALO CORN GLUTEN FEED makes milk the way it does. They did not care WHY so much, as long as they got the milk. But the *very high digestibility*, in large measure, *accounts for it.*

See that there is plenty of BUFFALO CORN GLUTEN FEED mixture in the feed trough in front of your cows—and you will understand *why* BUFFALO CORN GLUTEN FEED is so well thought of on thousands of real dairy farms.

When writing advertisers please mention Hoard's Dairyman.

Washington, D. C., Weekly News

[SPECIAL TO HOARD'S DAIRYMAN]

WASHINGTON, JAN. 12—In spite of the uncertainties as to whether or not the emergency tariff bill could possibly be enacted into law at this session of Congress, representatives of the dairy interests appeared here in force on Tuesday, January, 11, to present the emergency which the industry is facing to the Senate Finance Committee and to demand a fair tariff on butter, cheese, and other dairy products to prevent this emergency from going on to the point of ruin.

John Farrell of the Dairy Products Committee, Geo. L. McKay of the National Association of Creamery Butter Manufacturers, Howard Bronson of the New England Milk Producers' Association, W. F. Schilling of the Twin City Milk Producers' Association, O. M. Camburn of the Dairy Division of the Massachusetts State Department of Agriculture, Senator J. M. Hackney of Minnesota representing the Holstein-Friesian Association of America, President M. D. Munn of the National Dairy Council, A. M. Loomis, secretary of the National Dairy Union, and a number of others were before the committee. Resolutions and requests from Pacific coast dairymen and dairy interests in many other sections were presented.

Senator La Follette of Wisconsin, a member of the Finance Committee, assured the dairy representatives that he would use his utmost efforts to see that an amendment giving the dairy interests such protection as was possible at this time, is added to the bill. In the discussion, rates of from six to ten cents on butter were suggested, also from five to ten cents on cheese, and a four cents per gallon tax on whole milk. One suggestion which met considerable favor as an emergency tax was a fifteen per cent ad valorem tariff on all dairy products.

The committee was noticeably impressed with the statements made which showed the wholesale disturbance in the dairy industry due to the closing of the condenseries, and the falling prices of butter, and more particularly with the latest reports of the Bureau of Markets, showing big Danish shipments, and even shipments from Turkey in Europe coming to this country. Charts prepared by the Dairy Division of the Department of Agriculture showed the great falling off in European consumption of butter, and the decreased buying power of Germany and the United Kingdom as causing the big overproduction of the European countries, which, combined with the difference in exchange, made the American market so attractive as to cause the flow here in the past eleven months of over 33 million pounds of butter in addition to large shipments of other dairy products.

Several members of the committee were averse to considering any additions to the bill as it came from the House. Among these is Senator Smoot of Utah, who is interested primarily in a tariff on wool. Senator La Follette's view was expressed in this language: "I prefer to save the dairy industry from ruin while there is a chance, rather than to wait for the fate which has overtaken the cotton and wool industries before taking remedial measures."

Senator La Follette read into the record a telegram received from Hoard's Dairyman urging proper tariff protection.

The dairy leaders who were here for the hearing expressed the sentiment that even if the bill did not go through with the dairy amendment, a strong case had been made which would greatly aid in getting proper schedules included in the regular bill now being prepared by the House Ways and Means Committee. The dairy hearings before that committee will be on January 22 according to present arrangements.

⚜

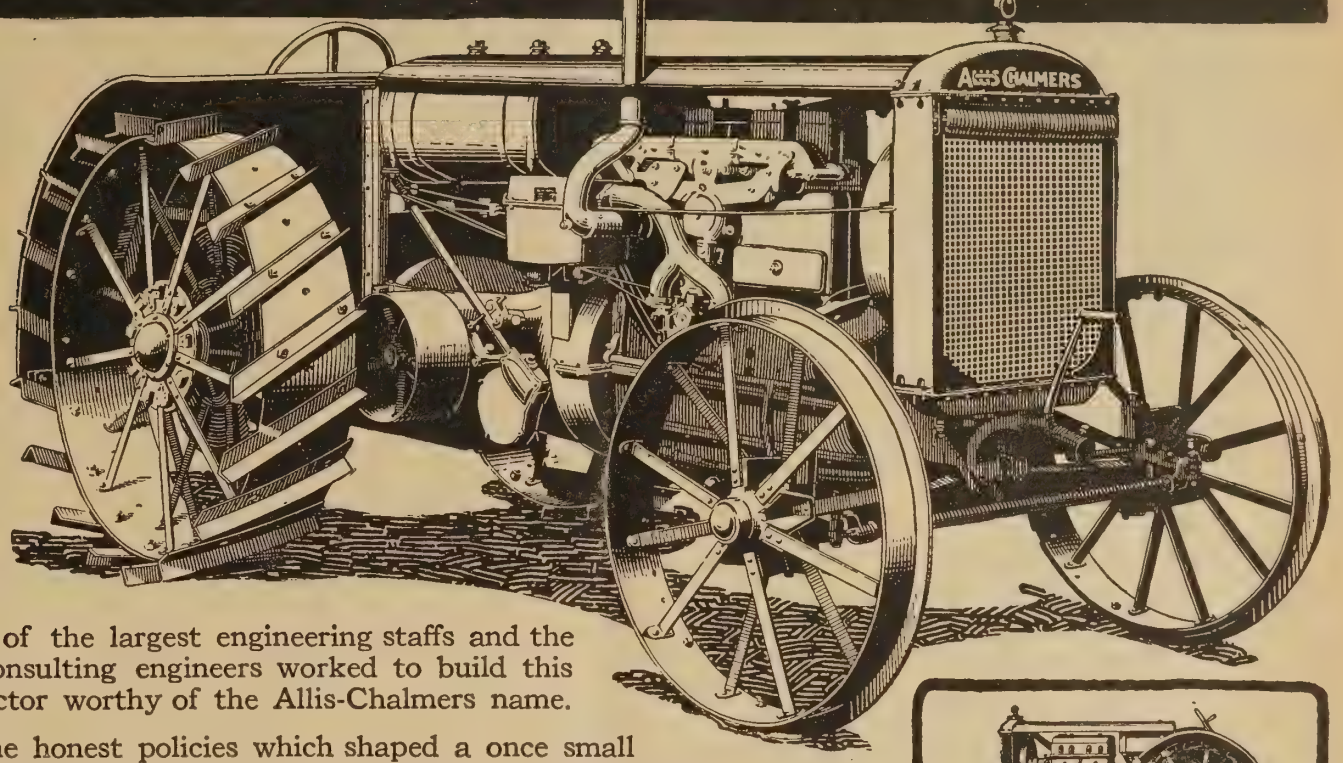
Most of the dairy representatives who were here on Monday were given the privilege of making statements to the House sub-committee on agricultural appropriations, of which Representative Sidney Anderson is chairman, in the interest of the various appropriations asked for by the department for the work of the Dairy Division. On Saturday a large delegation was here in the interest of the tuberculosis eradication appropriation.

⚜

An effort is being made this week to get a resolution reported from the House Committee on foreign relations, on the subject of inviting foreign governments to participate in a World Dairy Congress to be held here next year. The President's letter transmitting with his approval the action of the National Dairy Association and other organizations represented at the Dairy Show in Chicago, the endorsement of the secretary of agriculture, and the secretary of state, has gone to this committee for appropriate action. Representative Potter of Pennsylvania is chairman.

⚜

Milo D. Campbell, president of the National Federation of Milk Producers, is planning to spend some weeks in Washington in the interest of the Capper—Volstead bill and other legislation and government matters of interest to the milk industry. He will take part in the tariff legislation and revenue legislation and will be a welcome addition to the group of farmer organization representatives here.



⚜

The Muscle—Shoals bill is still under debate in the senate, and is strongly and bitterly opposed, Senator Lenroot of Wisconsin leading the fight. He charges that it is not a real fertilizer measure, but in the interest of war preparedness and to provide an outlet for military ambitions. A letter to members of the House, written by representatives of the American Farm Bureau Federation after the defeat of the bill in the House, led to writers being asked to explain before the Graham Committee on Monday last. Neither President Howard nor Grey Silver would modify the statements made, that the bill was defeated through pressure exerted by private interests opposed to the Muscle Shoals development, and a bitter cross examination followed, in which Mr. Silver refused to answer questions asked him. The matter is still unsettled and bids fair to develop into one of the bitterest contests before Congress in a long time.

Minnesota Creameries

Reports from 198 co-operative creameries in Minnesota show that they paid their patrons during the month of October from 50 cents to 73 cents a pound fat, or an average of 65.4 cents. New York butter quotations during the same period averaged 60.5 cents. These creameries received from 1,532 to 16,173 lbs. fat during the month, the average being 9,529 lbs. The net price received for butter ranged from 47 to 62 cents, all but 37 creameries receiving better than 55 cents net.

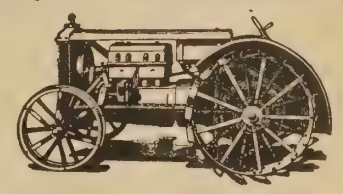
When a $42,500,000 Company Says "O.K."

Allis-Chalmers 18-30

3-4 Plow

3000 Lbs. Constant Drawbar Pull

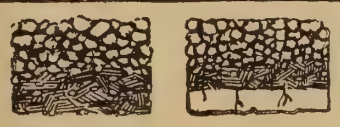
FOR seven years one of the largest engineering staffs and the country's foremost consulting engineers worked to build this brute of steel—a tractor worthy of the Allis-Chalmers name.



For seven years the same honest policies which shaped a once small manufacturing company into a $42,500,000 institution, have guided every step in Allis-Chalmers' solving of the farm power problem—policies which have been faithfully adhered to for 65 years.

For seven years the development of Allis-Chalmers tractors has been marked by a succession of tests—by trials of a score of models—and the expenditure of $3,000,000 that Allis-Chalmers tractors should prove capable of withstanding the punishments of service.

But that was not enough! It was the endorsement of the farmer that Allis-Chalmers wanted! That is why Allis-Chalmers first released only a limited number of 18-30's—why the judgment of owners was considered paramount—why the particular needs of every territory governed every unit of design.



Such is Allis-Chalmers thoroughness—an insistence that every product of the Allis-Chalmers plant serve its owners just a little more faithfully, economically and efficiently. So, today, the A-C 18-30 stands as the perfected tractor—serving in every section of the country, and against which not a single farmer has made complaint. And in support of this, we refer you to any A-C 18-30 owner for the facts about the service he is getting. So advanced is this tractor in design, so remarkable its field performance, that an A-C 12-20 is being built—*embodying the same time-tested features which have made the 18-30 famous.*

Now, climaxing seven years of tests and engineering effort, the $42,500,000 Allis-Chalmers Company says "O. K." Now Allis-Chalmers tractors are ready to set heretofore unattained standards in farm power efficiency—do the work tractors should do—but more economically, at less expense and for a longer time. And now Allis-Chalmers enters volume production with their 65-year reputation staked on this tractor.

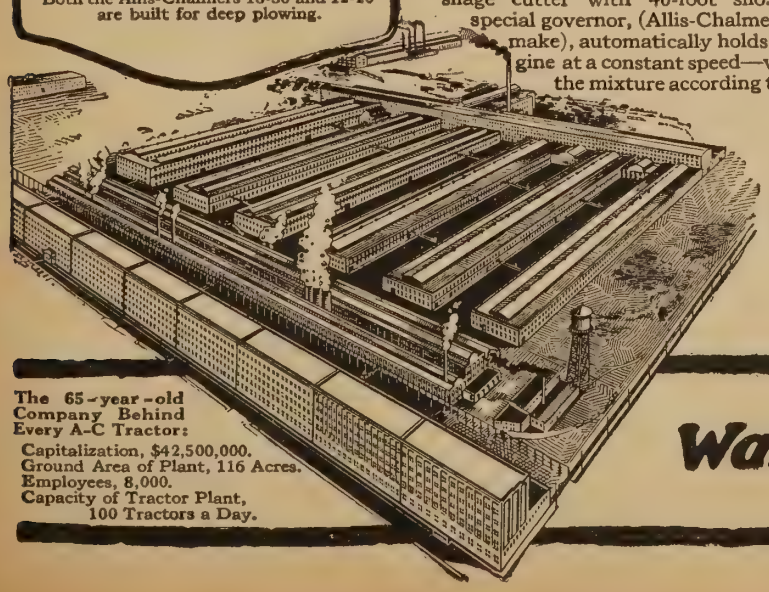
Watch for the A-C 12-20!

Here is the coming 12-20 tractor. There is no guesswork about what it will do in the field—the A-C 12-20 embodies the same construction features as the A-C 18-30. It is a 2-3 plow tractor with 2000 pounds constant drawbar pull—with a power reserve to overcome all emergencies. Its speed range is 2½ to 3¼ M. P. H. Factory and field tests are completed, and this new tractor is now being made ready for production. The same Allis-Chalmers engineers who have designed and built the manufacturing machinery for some of the largest factories in the world are entrusted with the making of the A-C 12-20. Large scale production, combined with Allis-Chalmers' enormous buying power, will make this 12-20 one of the greatest tractor values in the country. Go to your dealer today and ask to see the 18-30, after which the 12-20 was modeled. A demonstration will convince you that Allis-Chalmers is the make of tractor you want.

Plow Deep—Grow Larger Crops

The difference between a shallow and a deep furrow is the difference between a seed bed which rapidly loses moisture and one which tends to conserve it. Plow deep—into subsoil—and make every inch of rainfall deliver the maximum amount of moisture necessary for healthy plants and early harvests. By all means get a tractor that will plow *deep—without strain!* It will quickly earn its slight increase in cost through vastly increased crop yields. Both the Allis-Chalmers 18-30 and 12-20 are built for deep plowing.

Power for the Hardest Jobs



The 18-30 motor is conservatively rated, and possesses an abundant reserve. Under ordinary soil conditions it pulls four 14″ bottoms—*without strain.* It operates a 28″ separator, with all attachments, and handles the largest size ensilage cutter with 40-foot silo. The special governor, (Allis-Chalmers' own make), automatically holds the engine at a constant speed—varying the mixture according to load.

A Tractor with "Built-In" Long Life

Frameless construction and three-point suspension provide a flexibility that relieves all strains in roughest going, bearings are thoroughly lubricated by a pressure feed system perfected at a cost of $75,000; air entering the carburetor is first washed—freed of every particle of dirt and dust; an oversize fin-and-tube type radiator prevents overheating even in the warmest weather.

Quick Accessibility to Every Part

Every working part of the A-C 18-30 is open to almost immediate inspection. Clutch shoes can be taken out for re-lining in 15 minutes; cylinder heads are easily removable and expose all valves for grinding or cleaning of carbon; spokes on both guide and drive wheels are riveted both to the hub and rim, thus making it possible to replace individually any damaged spoke; crankcase interior can be reached through inspection plates.

The 65-year-old Company Behind Every A-C Tractor:

Capitalization, $42,500,000.
Ground Area of Plant, 116 Acres.
Employees, 8,000.
Capacity of Tractor Plant, 100 Tractors a Day.

WRITE FOR BOOKLET TODAY: Ask for 18-30 booklet giving exclusive features of Allis-Chalmers construction. Descriptive literature on the coming A-C 12-20—the smaller partner to the 18-30—will also tell you why your choice should be an Allis-Chalmers tractor.

DEALERS: The new addition to the Allis-Chalmers tractor plant provides a production capacity of 100 tractors a day. A mammoth sales co-operation program in keeping with this production is extended all A-C dealers. Write for details of attractive dealership and jobber proposition.

A Frank Answer to An Important Question

Because you have given us your confidence and patronage for so many years, we want to talk frankly with you about the price of farm implements.

The cost of manufacturing farm tools has not declined. While some raw materials have been reduced slightly in cost during the past 90 days, those we use are costing us more. We must purchase the materials we use months in advance and we are manufacturing today from materials that cost far more than those that went into 1920 implements. Yet the price has not been increased to take care of that advance—instead we are accepting this loss.

The price of E-B implements never advanced in proportion to manufacturing cost, because we purchased and installed the latest and best labor-saving machinery and gave you the benefit of the economies we effected.

Cut *your* cost of production. Make *your own* investment in labor-saving farm implements carefully. Be sure they will do the work required thoroughly. Find out how they save you time and labor. See to it that they are up-to-date, durable in construction and you will produce crops at a lower cost.

Buy implements of a reputable make—tools that bear a trade-mark known for reliability, then use your machines to their full capacity and take good care of them. Do this and you will see a profit on your investment for 1921.

Fundamentals of Tractor Engine Cooling

(Continued from page 7)

is less dense than cold water. The water which enters the top of the radiator is cooled and sinks to the bottom and returns to the engine.

Thus, it is obvious that this system should be kept filled to the top of the radiator in order to make a complete circuit of water through the entire system to prevent overheating. It is also important with this system to keep all water passages through the cooling system clean and free from any trash, rust, or other material which would hinder free circulation of the water, because there is no force behind the water except the force created between the difference in weight of cool and hot water. A method of cleaning the cooling system will be mentioned later.

CIRCULATING PUMP. The circulating pump cooling system gets its name from the fact that the cooling liquid in the system is circulated by a pump. The majority of tractor engines which use this system of cooling have the pump driven through the timing gears by the magneto shaft. In this system, therefore, it is highly important to drain the pump with the little petcock under it. If the pump is frozen and the engine is cranked by force, the timing gears are likely to be broken. This will throw the magneto out of time and cause an expensive repair job. Draining the water from the radiator does not mean that the pump is drained.

In the circulating pump cooling system, the connections between the engine and radiator and the water jacket itself are smaller than in the case of the thermosyphon cooling arrangement. Thus, if the circulating pump on the tractor motor is out of commission, one should not depend upon the thermosyphon principle for cooling because the water passages are not sufficiently large for correct flow of water without the force of the pump. Overheating is likely to occur, which will effect correct lubrication and the cylinder is likely to be scored which costs a big lot of money to repair or replace.

Packing the Pump

Very often the pump leaks where the shaft runs through it. There are two packing glands at each side of the water pump which may be drawn up from time to time to prevent leaking. If the glands need repacking to prevent leakage, unscrew the glands, remove the old packing, and replace with a new piece which has been "graphited". The packing should be wrapped around the shaft in the same direction which the nut is turned to tighten it.

It is allowable for the automobile engine pump to leak because this machine only works about 10 per cent of its time under full load and it is generally convenient to water. The tractor works about 95% of its time under full load and should be provided with a full supply of water at all times. The tractor engine cooling system should not be allowed to get low. The difference of 95% and 10% between the use of the tractor and automobile often costs the tractor operator a good deal. Too many farm tractors are put out of commission because of lack of knowledge, carelessness, and comparison of the job of tractor with that of the automobile. The farm tractor does not coast down many hills as the automobile does.

Cooling Liquids

Most tractor motors are cooled by water. In view of the fact that the tractor engine works under a heavy load the most of the time, there is likely to be some evaporation of the cooling water. If the water contains any salts, such as lime, there is likely to be a scale deposited in the water system which will prevent the free flow of water and a scale in the water jacket has a tendency to insulate the water from the metal; thus, the heat is not taken from the engine as it should be. Therefore, the use of rain

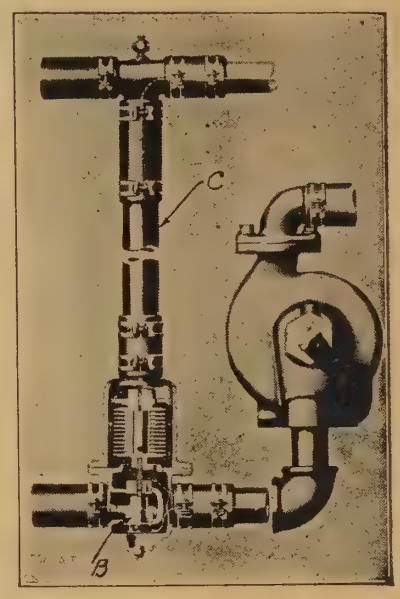

Fig. 2. Thermostat control on cooling system keeps the engine temperature correct.

water in the cooling system is ideal from the standpoint that it does not contain any lime or other salts in solution.

A few tractors use oil in the cooling systems. This is to prevent freezing and the trouble of draining and refilling the cooling system each time the tractor is to be used in cold weather. If the oil should foam, there is likely to be water in it. A small amount of water will evaporate in a short time and the foaming should stop. Foaming is sometimes mistaken for overheating. If the oil becomes thick in cold weather and moves slowly, the oil may be thinned by adding kerosene. When oil is used as a cooling liquid, the cooling system should be kept full. Oil will cause rubber connections to decay very rapidly.

Kerosene is being used to a great extent during winter for cooling tractor, truck, and automobile engines. It seems to give good satisfaction and is efficient.

Non-Freezing Mixtures

When water is used as a cooling liquid its freezing point may be lowered considerably by addition of various materials such as denatured alcohol, calcium chloride, glycerine, etc. When any of these or other compounds are mixed with water, there are certain requirements which should be fulfilled: (1) it should not damage the cooling system; (2) it should be cheap; (3) it should not vaporize or waste away easily.

Glycerine will attack rubber connections and it is rather expensive. Glycerine also may contain some free acids which will attack the various metal portions of the cooling system.

Calcium chloride, or common salt, has a tendency to cause metal parts to rust and will leave a crust in the cooling system if much of the water is evaporated. This crust will stop up the cooling system. Salt solution, however, makes a very good non-freezing solution.

A 50-50 mixture of alcohol and rain water makes a very good cooling mixture. The only difficulty lies in the fact that alcohol will vaporize easily and it is necessary to add alcohol now and then to keep the solution up to normal. Always use denatured be-

cause wood alcohol is likely to contain free acids which will attack metal.

Non-freezing mixture		Freezes at
Water 50%	Alcohol 50%	About 32 below 0
Water 75%	Salt 25%	About 18 below 0
Water 60%	Glycerine and alcohol 40%	About 25 below 0

Kerosene will not freeze.

Thermostat Control

If a cooling system on a tractor engine is designed for mid-summer temperatures that cooling system is likely to keep the engine too cool in zero weather. To obviate this difficulty and to have the engine heat up quickly after starting, a thermostat may be installed.

Figure 2 shows the details of a thermostat which is standard equipment on several of the well known tractors. The active part of the thermostat is fluted copper tube A. The tube contains a liquid which changes from a liquid to a gas when it is heated and thus expands. When the water in the cooling system cools to a certain degree the gas in the fluted copper tube turns to a liquid and the valve B closes. This restricts the flow of water between the radiator and pump or causes the water to flow through the water jacket and through the tube C. The cooling liquid rises in temperature very fast when the engine is operating and the liquid in the copper tube turns to a gas, expands, and opens the valve B and the water begins flowing through the radiator when the right temperature has been reached. This arrangement keeps the engine operating under correct temperature at any atmospheric temperature. Another advantage of the thermostat is that the engine heats up immediately after it is started. There is always a disadvantage where there is an advantage, and the only way to decide between the two evils is to choose the one which will give the biggest profit. The disadvantage is the addition of more parts to the machine, adding complications and reducing simplicity.

When the Tractor Overheats

Overheating of the tractor causes loss of power and is detrimental to the life of the machine. Some of the causes of overheating are: (1) lack of proper lubrication; (2) water pump not working properly; (3) fan belt slipping or broken; (4) radiator or other parts of the cooling system clogged up; (5) gas and air mixture too rich; (6) cooling liquid low; (7) spark retarded.

If the oil is low in the engine a new supply should be added. It sometimes happens that there is plenty of oil in the crank case, but the screen around the oil pump may be clogged. This often happens. If a thick grade of oil is used, it may freeze in cold weather in which case the pump will not supply it to the engine bearings.

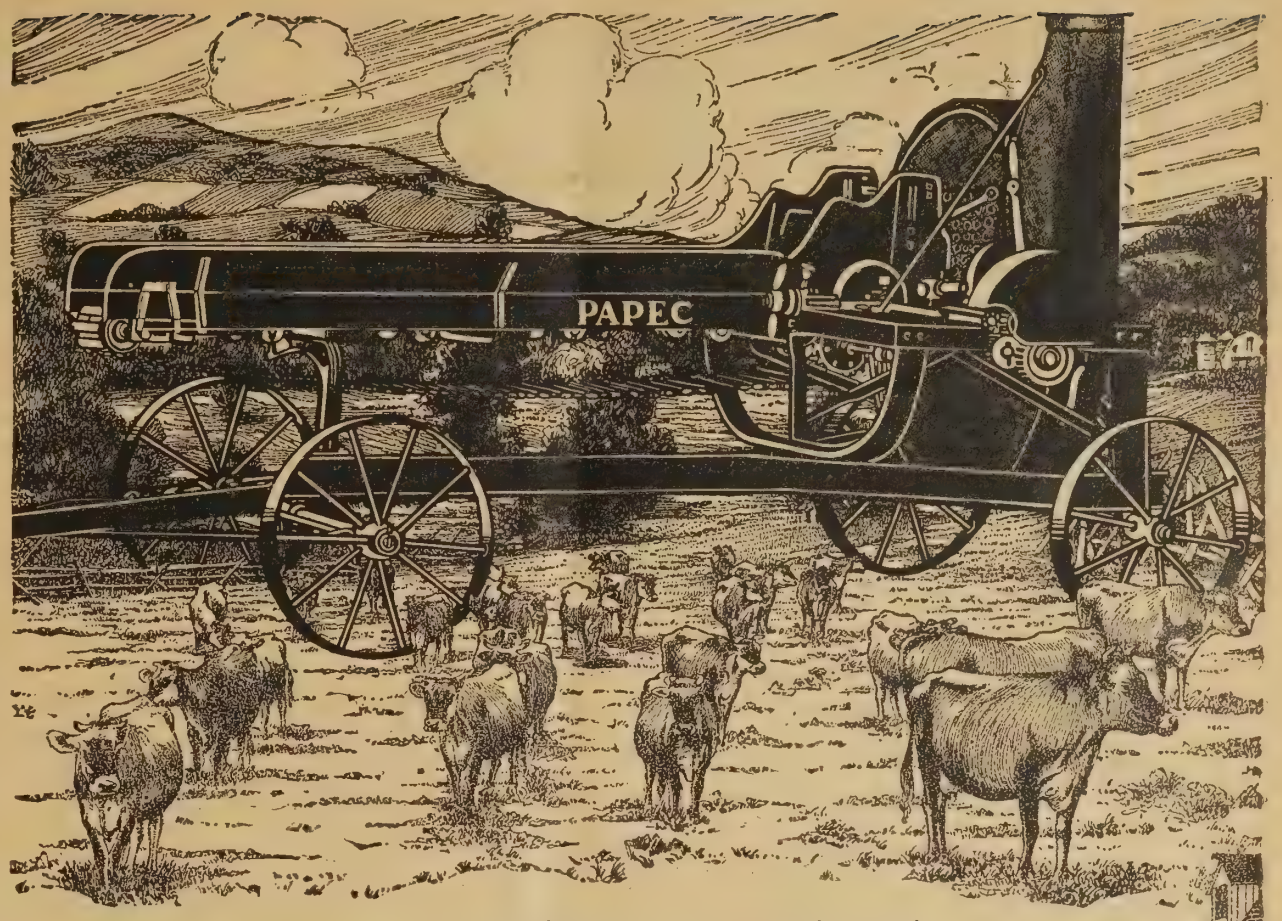
It sometimes happens that the impellers of the pump may be broken and fail to circulate the cooling liquid.

The fan belt may be slipping on account of being too loose or may be greasy. The grease may be washed off with gasoline.

If the radiator and other part of the cooling system is clogged up, it may be washed out with a hose placed in the radiator filling cap. If lime or other scale is deposited in the water system, it may be removed by dissolving all of the baking soda that will dissolve in enough warm water to fill the cooling system. Pour the solution in the cooling system and run the engine about an hour with the spark retarded to warm it up. Allow the solution to remain in the cooling system about three hours and drain out. Wash the system thoroughly with a hose.

If a black smoke comes from the exhaust the mixture is too rich. Cut down on the fuel at the carburetor.

If the engine knocks on hard pulls, clean out the carbon.



Always keep plenty of water or cooling liquid in the system.

Always run the engine with the spark properly advanced.

Very often cooling troubles arise from obstructions in the hose connections. The hose connections have a fabric in them. This fabric may get loose and hang down in the pipe and hinder proper circulation.

"supreme with men who know"

THE PAPEC Ensilage Cutter is the choice of men who know machinery. The mechanical principles on which the Papec is built have remained the same for 20 years—because these principles are *right*. The Papec has reduced the cost of silo filling for thousands of farmers, because its sturdy, durable construction has practically eliminated breakdowns and delays.

The fact that the Papec operates with *less* power proves its efficiency. Because of this efficiency, demand for Papec Ensilage Cutters has made the Papec plant the largest exclusive ensilage cutter factory in the world. Papec is *"supreme with men who know."*

With its six fans instead of four or fewer, the Papec throws as well as blows the silage in a steady stream to the height of any silo. It is made in four sizes—capacities from 3 to 30 tons per hour—a 3 horse-power gasoline engine operates the smallest size. Remember, it is guaranteed.

Own Your Own Papec—It Pays

Tell us what kind of power you have and the horse-power, and we will tell you the right size of Papec to buy. Write today for catalog and guarantee. Use the coupon.

PAPEC MACHINE COMPANY 116 Main Street SHORTSVILLE, NEW YORK

With our 36 distributing houses the Papec dealer can give you the same service as if the Papec were made in a nearby town

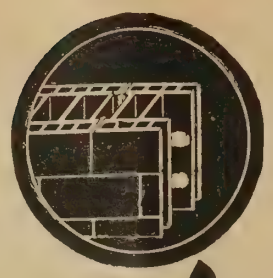
Natco Dairy Barns Are Warm in Winter

NATCO barns are warm in winter, yet cool in summer. They provide year-round comfort for your cows. More comfort in the stable means more milk in the pail—more money in the bank.

The hollow spaces in a glazed Natco Hollow Tile wall provide a blanket of still air through which heat, cold or dampness will not pass.



And the cost? Perhaps a little more at first, but *far less* in the end than for other construction. The saving in insurance and upkeep will repay the added investment within a few years. All further savings are clear profit.

Whatever you intend to build, our book, "Natco on the Farm," will offer helpful suggestions. Write for it today—*no charge.*

Ask your building supply dealer to quote you prices on Natco Hollow Tile.

Nebraska Dairymen in 36th Annual Convention

W. F. DOBBINS, NEBRASKA

A SPIRIT of optimism characterized the thirty-sixth annual convention of Nebraska dairymen. This was reflected in the address of welcome of Dean E. A. Burnett of the state agricultural college. Dean Burnett told the dairymen that it has been some time since the dairy industry has been so strongly in the limelight as it is at the present time. In times of great prosperity intensive industries suffer most because farmers receive high prices for their crops and farmers give much less attention to milking cows and to improving their herds. Recently the dairy industry has been making great strides in the number and the quality of the cows found on Nebraska farms.

Dean Burnett highly commended the Nebraska farm bureau and the county agents for good work. He said that through these activities the breeding of live stock has been substantially increased in many of the counties of the state. The necessity of weeding out the scrubs was emphasized. If Nebraska dairymen will work to improve their herds, the dean said, production would be doubled in from seven to ten years. He outlined the program of the state dairy department, its primary purpose being to educate young men and young women and then send them back to the farms to use the knowledge they have gained to develop the dairy industry.

J. H. Frandsen, head of the state dairy department, in an address on "The Future of Dairying", also brought words of cheer. "With the collapse of a satisfactory market for farm crops, the dairy cow is now of immense assistance in becoming the market and saving the day for many a farmer," he said. "She is one of the most useful factors, and perhaps the safest, in developing permanent prosperity for the great plains country, and will not only pay grocery bills and other urgent expenses of the farm, when the bottom drops out of the grain market, as at present, but will also lay the foundation of the future success for many farmers.

"Not only health but also economy is served by the increased use of milk," he said, "for at the present price of foods, milk is cheaper than most others. Drinking more milk means better children.

D. D. Aitken, president of the National Holstein-Friesian Association of America, and the "father" of the National Dairy Council, told the dairymen that he had the utmost contempt for the fellows who go over the country declaring that farmers are abused and that they need sympathy.

"Farmers are engaged in the biggest business on earth and they are capable of taking care of themselves," he said. "They are not abused nor are they looking for sympathy. He was opposed to class legislation of any kind. He did not favor special legislation for the farmers or any other body engaged in various industries. He wanted to see no class feeling or class consciousness.

Dairymen were informed how rapidly the demand for milk is growing, and he begged them not to be so much interested in making money that they would neglect the pureness of their product. Then they would be able to tell the mothers of Nebraska that the milk they furnished is fit for their children. "Dairymen can't expect to make a success of their business," he said, "unless they use the most efficient and economical machinery." He predicted that unless the production of milk is greatly increased that in future years the supply will not be sufficient to meet the demand. He urged that dairymen make efforts to constantly improve their herds.

"The Holstein-Friesian Association of America has a wholesome contempt for the trickster and the cow jockey," he said. He was cheered vigorously.

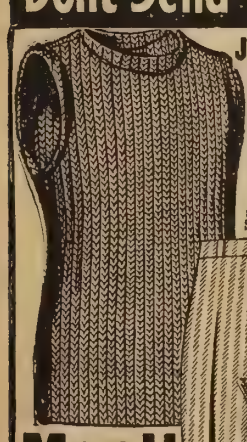
J. G. Winkjer, of the United States Dairy Division, told how to improve the dairy herd. He has charge of the organization of co-operative bull associations over the country. He said that there are now 124 such associations and that the movement is spreading rapidly. He explained that through co-operative bull associations the small dairyman is able to build up a profitable herd on the same financial footing with the large dairyman. Professor M. N. Lawritson, of the state dairy department, told what extension work is planned for 1921. Co-operative bull associations, girls' and boys' clubs, and co-operative cow testing are among the projects which will increasingly occupy the attention of the extension department. Professor J. W. Hendrickson, of the same department, presented an exhaustive paper on the "Feed Cost of Milk Production". The experiments covered a period of five years with the state farm herd. The result of the experiments proved of much value to the dairymen.

President Harvey H. Morrison of the state association told the dairymen that they should breed only the best strains of cows. He would have a community noted for the great excellence of one breed of dairy cows and thereby build up a much greater business for their product. John Frazeur, manager of a co-operative milk company of Omaha, a plant run by farmers, said that it had a prosperous season during the past twelve months.

The old officers of the association were re-elected. They are: president, Harvey H. Morrison; vice-president,

R. C. POLLOCK

Mr. Pollock has accepted an appointment with the American Farm Bureau Federation in the Department of Organization. He begins his work in Arizona, where he will be in charge of an intensive campaign for membership. Mr. Pollock comes to the Federation from the directorship of the extension department of the Holstein-Friesian Association of America. He has had conspicuous success as an organizer. He was born and reared in Southeastern Iowa and graduated from the Iowa State College in 1913. After graduation he was county agent in Dakota County, Minnesota. For six months he was Assistant County Agent Leader in South Dakota, and from there went to North Dakota to take up county agent leadership. In September, 1919, he became head of the organization work of the Holstein-Friesian Association of America. Since that time he has organized the breeders of black and whites in Ohio, Wisconsin, Michigan, New York, New Jersey, and New England. After his campaign in Arizona, Mr. Pollock will go into the great Northwest to carry the message of the American Farm Bureau Federation.



C. E. Morse; secretary-treasurer, J. E. Palm.

Resolutions were approved asking congress to place a tariff on butter and other dairy products, requesting the legislature for money to reimburse dairy farmers whose cattle react to tuberculin, asking for the repeal of an act taxing dairymen one dollar as a license fee, and expressing appreciation of the efficient services of Professor J. H. Frandsen, chief of the dairy department, who has resigned after ten years of efficient service to accept the position of dairy editor of one of the leading farm papers of Nebraska and Kansas. Nels Anderson was also remembered appreciatively for caring for the Nebraska champion dairy cow belonging to the state agricultural college.

The attendance at the state association was much larger than for several years, between 350 and 400 dairymen being present. Nebraska dairymen have heretofore come to the state meetings knowing that the industry had been crowded to the wall and had slumped because of the great prosperity of the country as reflected in the extremely high price of farm crops. The situation is reversed this year, and this was distinctly noticeable among the delegates of 1921.

Have you talked with your neighbors about subscribing for Hoard's Dairyman? Why not do it now? Make up as large a club of subscribers as you can and send them in.

Dont Send 1 Penny

Just send your name and address, size and color, and I will send this sweater and pair of trousers to you. You don't pay one penny until they are delivered at your door by the postman. Trousers alone are worth more than $2.98, so you are getting the sweater **absolutely FREE.** Send your order now.

Men!!
Pants and Sweater
Both $2.98 for 2==

The trousers are made of a very strong and durable gray striped worsted material. They have customary pockets and belt straps. All seams are double stitched and guaranteed not to rip. These trousers would ordinarily sell for more than $2.98. **Color: Oxford gray stripe only.** Sizes: 30 to 44 inches waist measure.

The sweater is made of heavy commercial yarn, woven in slip-over style, with round neck and sleeveless. Fits snugly to body. **Colors: Khaki or navy blue.** Sizes: 34 to 46 chest measure. Remember, one sweater and one pair of trousers for **$2.98.** They will not be sold separately.

Delivery Free Just send your name and address—no money. Be sure to give size and color. When the sweater and trousers are delivered at your door by the postman, pay him **$2.98** for them. We have paid the delivery charges. Wear both articles and if you don't find them all you expected, return them and we will cheerfully refund your money at once. Order by No. 42.

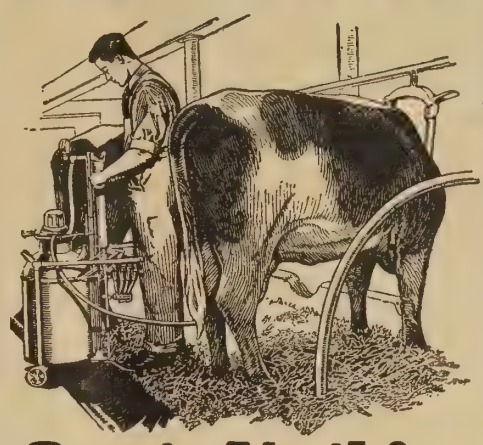
Well Over 30,000 Leaguers Agree to Pool

HOARD'S DAIRYMAN:—With the first of the year there are over thirty thousand pooling contracts signed in League territory and received at headquarters. There were the original four thousand when the present new drive was undertaken about October first. If, as we understand, there were on January first 35,000 of the 50,000 needed on hand, it is no wonder that League officials say with emphasis that the full number is sure to be secured and that the form of the contract is not going to be changed. This indeed was voted with a whoop at the Utica meeting in December. There were those there who thought the form should be changed and who expected to get a resolution passed there to effect a change. It soon appeared that any man who might dare to present any such resolution would be swept off his feet in a perfect Niagara of opposition and reproach and no one had the courage to make the attempt.



The question still bobs up locally all over the territory, "Can the pooling be made effective early enough to prevent any serious break in the League?" There are times and places that look dark. There is opposition and fear and even indifference, apparently. There is hesitation from some who look to others for advice and leadership. Most leadership is loyal, but occasionally it is not. Almost all farmers are honest in their positions. Some may be trying to approach the spectacular and are succeeding. These may yet find a hot spot. As the time goes on more dairymen are coming to see that the pooling contract is a better document than they at first thought. Then it is coming to be seen that only voluntary individual effort can bring early success and I am looking for this to be put into operation. I am now at a county meeting where the lead is the best, but where there are still four hundred unsigned members. Possibly this is the best county but here is work to be done, and it will be.

As a sample, let's look at the situation here. One town has had a market for its milk at full price for only about a month since October first, and this month there are 47 farmers there who cannot sell. They can get the condensers to take it and pay something but they prefer to stay by the League and hold their milk. Another local has a market with a condenser who is believed to be honestly offering to buy temporarily at less than League prices as he will lose too heavily without. The League cannot sell at a lower price than set in the agreement with the conference board, but if the local farmers think best to let the milk go temporarily at fifty cents or so under, it probably would not be looked upon as an act of disloyalty. In both of these places the farmers are anxious to support the League and pooling. One other is the case of dealer believed to be honest in his claim that he cannot take all the milk at full price. Here local farmers have come to an agreement as to the amount to be taken, a committee has been appointed, and this committee is to say how much milk each patron may deliver, the remainder to be held back and used on the farm.

These are incidents on one side, but there are others. One group of several hundred farmers lost their market early. Some of the local leaders, according to reports, commenced to blame the League directors and officers and to demand things of them that were impossible. It commences now to appear that the individual farmers are more loyal and in fact not ready to follow their local lead-

(Continued on page 31)

The Milking Machine for 1921!

Sensational Improvement!

Costs Half; Does Double Work

The *new* PAGE Milker—operated by hand—one man milks 2 cows at once. Little work—quickly done—easiest of all machines to handle—easiest by far, to clean; the most wonderful advance in milking machine manufacture.

Costs Nothing To Install—

Not a cent of installation expense—no engine, no motor, *nothing! Just* the machine for herds of 12 to 16 or 20 cows. For large herds get our electric or engine power outfits at $225 and up.

You milk right into your own ordinary milk can; no extra pails; no pipes; no pulsators; no tanks. Amazingly easy to clean.

Guaranteed to do the work.

Guaranteed to save time.

Guaranteed—the last word in sanitary milking (one creamery wrote us that the most sanitary milk came from farmers using the PAGE Milker).

And!—

Guaranteed:

Action alterable to suit every cow separately. Instantly adapted to any cow according to her disposition and how easily or how hard she milks.

PUBLIC AUCTION

A 600-ACRE IOWA FARM

At front door of Court House, in

Marshalltown, Iowa

Saturday, Feb'y 5, 1921

at 2 P. M.

This farm lies in a body, eight miles from Marshalltown, the County Seat, on a graveled road.
Adjoins the town of Albion, Marshall County, Iowa. Splendid community, fine school and churches.
Large farm house and good tenant house. Matured groves. Large basement barn with ample granary. Cattle shed 60x120, hog house, cribs, garage and icehouse.
Running water. Windmill and deep well with supply tank and water piped to buildings.
Excellent shipping facilities. M. & St. L. depot and stockyards at Albion adjoin the farm. C. & N. W. and C. G. W. at Marshalltown.
Good blue grass timber pasture and considerable native hard wood timber.
Has been used as a stock farm for more than thirty years and is in a high state of cultivation.
One of the best stock, or dairy, propositions in Central Iowa.
Possession March 1, 1921.
Sold under order of Court to settle estate.

Address:—G. A. Mote, Sole Referee, or F. L. Meeker, Attorney for estate, or E. N. Farber, Attorney, Marshalltown, Iowa

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Where Do You Stand?

During the past two months it has been the pleasure of the Junior Editor to write a personal letter to each of several hundred new members who have joined the Hoard's Dairyman Juniors Club. This, indeed, has been a pleasure for it has not only extended our acquaintanceship, but in addition we know that it is going to add to the pleasures and profits of these young people. And we already know this for most of these new members have had happiness brought into their lives by the possession of the Dairy Farm Boy's Creed which is given with every membership. They have said this and we dare say that many of our Juniors can quote this creed by heart. That is splendid and we wish that we could say every farm boy and girl knew this. We are certain it would bring an inspiration into the lives of all of them.

One fine thing about our club: its membership is not limited. With the hundreds we have enrolled there is still room for those who desire to come in. Sometimes the girls write to us, asking if they too can join. In all cases we have said, "Yes," and as a result our girl membership has rapidly increased. We welcome all alike; there are no distinctions made. But there is one limitation which I nearly overlooked and of course you will all see the reason for it. It is this. In order to join our club, some member of your family must be a subscriber of Hoard's Dairyman so that you will reap the full enjoyment of being one of our Juniors by having access to the Junior Department. In fact, this is about the only way in which you can keep in touch with the other Juniors and become acquainted with them and also us. And, in addition, we think that you will derive a great deal of pleasure from the stories which appear for the Juniors.

The new year has started; in fact, it is getting well under way. We are wondering where you stand to-day as a live young American! We trust that you have all made some very definite plan for the year which when carried out will make you feel as 1921 comes to a close that it has been a very profitable year for you.

Many of you will say, "What can I do?" The trouble is, boys and girls, there are so many things for us all to do that it is difficult for us to settle upon any one thing. Club members are always busy people, but every one cannot belong to a club for various reasons. Going to school is usually the chief business of the average boy and girl. Then if this is the chief thing in which you are engaged, why not make it of the most importance? Many of us can make this a banner school year if we so desire. That is something which we think is worth while and every Junior can engage himself in this business. We should all acquire a looking ahead spirit and then go after it.

But in addition to our school activities there are many other things which we all do to add to our pleasures. We find that thousands of boys and girls are finding a great deal of profit and pleasure in being a Hoard's Dairyman Junior. We are proud of our Junior organization. Don't you want to be one of us?

Junior Letters

In each issue of Hoard's Dairyman we aim to have some of our best Junior letters appear in the Junior Department. We know that some of you have been disappointed because you have not yet found any of your letters in print. But of course there is a reason for this. Did you ever stop to think that it would be impossible to print all of the letters that come to us? We are sure that you will agree with us that it is, so the thing which we try to do is to print only the best ones. But you say, "I have done my best and none of mine have ever appeared." But did you?

Of course you want to know some of the things which we consider in selecting the best ones; so we are going to tell you about them, and then the next time that you sit down to write us you may perhaps be able to do a better job if you think about what you are now reading.

First of all, we consider whether your letter deals with things of interest to other Juniors. This you will see is something of prime importance, because none of us likes to spend time in reading uninteresting things. Some of the things that make letters interesting are those that tell what you are doing and how you are doing it.

Another matter which we always take into consideration is how the letter is put together. By this we mean how it is written. And so we consider the writing, the punctuation, the spelling, and how you say what you want to tell. A letter may be ever so interesting but if it is difficult to read on account of poor spelling and writing, the interest is dead before it is half read. Of course we don't expect that the younger Juniors can do as well as the older ones, so your age is also considered.

And in addition to all of this there is one other thing that should not be overlooked in letter writing. Just the other day your Junior Editor had to lay aside a number of letters written by Juniors from those he was answering because the names and addresses of the writers were so poorly written that he could not cipher them out. So we caution you to always write your name and address so that they can be easily read. This is very important if you want to have your letter answered.

Now the next time that you undertake to write a letter try to make it so interesting and write it so well that you, too, will have your efforts rewarded by seeing it appear on the Junior page.

Watch Out for the Louse

It is during the winter season that calves and cattle become affected with lice more than any other time of the year. Usually calves and young cattle suffer the most from this parasite, although older cattle and especially those which are being poorly cared for are also frequently affected. It is not a difficult matter to discover the presence of lice upon an animal, for there are several indications which usually prove the case. Affected animals when turned into the yard generally start to rub their necks and shoulders against posts, fences, and trees. And, in very bad cases, the hair often begins to fall out and a close examination of these places on the neck and shoulders will reveal the trouble. It is cruelty to animals not to attempt to kill the lice when their presence is known. And don't forget that lousy cattle will not make the progress in their winter's growth that they should, no matter how good the care that is otherwise given them.

The remedy is simple and effective. Coal tar dips which are now found upon the market may be used very successfully for the purpose. Then there is the home-made kerosene emulsion which also gives excellent results. Any Junior can make this preparation without any difficulty if he follows these directions. Bring one gallon of soft water to boiling and then shave into it a half pound of hard soap, allowing it to thoroughly dissolve. Then add two gallons of kerosene and mix thoroughly until a thick, creamy emulsion is formed. The oil will not separate from this very easily. The next step is to add to this emulsion about 19 gallons of water and the preparation is then ready for use.

And it is just as easy to apply as it is to make. Here is one of the best ways. With the preparation just about lukewarm apply it with a brush, wetting all parts of the body thoroughly and especially the neck and shoulders. In order to guard against the animals taking cold, it will be a good practice to blanket them immediately following treatment and by all means do not turn them out in the cold. A second application should be made after about 10 days. In especially stubborn cases, it might be good to clip away the hair from the places most affected before applying the wash.

Of Interest to Junior Poultrymen

Armistice Queen is a proud hen, and well may she be for on November 11 she finished a year's record with 284 eggs chalked up to her credit. She is quite an ordinary looking single comb white Leghorn, bearing the number K227. She is the daughter of Lady Vanity, who had a record of 208 eggs. Armistice Queen began her record when but six months and twelve days old and she has certainly been on the job ever since. She is a small hen, weighing little over four pounds, but she is all hen, and the producing kind at that. She is exceedingly active from morning until night and is very friendly at all times.

This bird is not a matter of chance, but rather the result of careful breeding and selection. And she has made her record under ordinary conditions. She does not live in a heated coop, nor were electric lights used at night to keep her awake and active. Neither did she receive any stimulants to force her. She has had a good place to live in, no better than any farm flock should have if it is expected to do well. Her feed has been good and given in plenty and she has always been attended to regularly, so that it can be claimed that her record has been made under ordinary conditions of egg production. It pays to breed and select from the best producers. Armistice Queen has demonstrated this to the satisfaction of the Poultry Department of the Wisconsin College of Agriculture, the home of this record maker.

Trapping Hints

The country boy who does not trap is depriving himself of considerable easy money. There is a lot of fun in trapping and big money, too. Even the boy who goes to school can arrange to run a trap line. It is not necessary to go into the wilds of the far north to successfully trap fur-bearers. Almost every rural community has a certain amount of fur-bearing animals and may be good trapping ground.

The amateur must be willing to put forth his best efforts and get into the game in earnest. The boy who is careful and observant and who uses good judgment in making his sets will have a neat bank account when the season is over.

The first thing to do is to locate the trapping ground and this should be done early in the fall. Naturally, the nearer home it is, the better. Go over the ground carefully, several weeks before you are ready to trap, and look for dens and runways. Examine closely the ponds and stream banks, old trees, hollow logs, stumps, stone walls, old tumble-down fences, etc., and you will find many good places to set traps.

Do not start trapping too early as it does not pay. The furs are not prime and command comparatively low prices. Wait until the cold weather sets in and then you will be well paid for your efforts. Most states have laws regulating the trapping of fur-bearing animals. Obey the law. If you live in a state that has no trapping laws, use your own judgment regarding the time to start and quit. Always remember that one prime, good quality skin will command a higher price than several unprime skins. November 1st to 15th is early enough to start trapping.

As a rule, the country boy has only a limited time to devote to the trap line and the question of how many traps to set depends on how much time he can spend on his line. Don't try to set too many traps. It is better to set a few and look after them well. Of course, use as many traps as possible, but never set more traps than you can attend to properly.

Visit your traps often and try to follow the same path as much as possible. All animals are more or less suspicious of human scent. Always wear gloves when handling your traps, so that no human scent will remain on the traps. To remove the odor of new metal, boil the traps in water and wood ashes. Do not take a dog along when going over your trap line, as the game may scent the dog and be frightened away.

The amateur will, undoubtedly, secure better results by using baits and scents than trying to take the animals in blind sets. There are many trappers who do not use a bait or a scent, but until the amateur becomes thoroughly acquainted with the habits, haunts, and characteristics of the different fur-bearers, he will find the use of baits and scents advantageous. The bait is some article of food of which the animals are particularly fond. A scent is a strong-smelling substance which arouses the passions, incites curiosity, or suggests a particularly tasty morsel of food. Bait or scent should never be put on the pan of the trap, but placed on a stick, or

4,200 Eggs From 48 Hens

Simply write me and I will send you a big double size box of my famous **Buttermilk Compound Tablets** by return mail, postpaid. I want you to know that you can double and treble your poultry profits by doubling or trebling your egg yield—perhaps get five to seven times as many eggs as did many of my friends last winter by using these wonderful tablets. Fed in drinking water or feed. Because I want these tablets known in every township in America I say: Try them at my risk. If you like them, tell your friends. If not, you are not out a cent.

Over 10,000 People Wrote Me Last Year

Here are a few samples of the kind of letters I get from all parts of the United States.

4,200 Eggs.

I used two boxes of your tablets. Before using them got only 6 eggs a day. Within two weeks was getting 12 to 15 eggs a day. In seven months I got about 350 dozen (4,200) eggs from my 48 hens. I did not have any Roup. I give your tablets the praise.
MRS. ARTHUR TUCKER. Wilkinson, Ind.

75 Eggs Instead of None.

I found the tablets were fine to start hens to laying. Before using the tablets I wasn't getting any eggs. Within 10 days after using tablets increase started. I was finally getting 75 eggs a day and fed the tablets until spring.
MRS. R. H. TULTZ, Scranton, Kans.

Makes 'Em Lay in Coldest Weather.

Last winter I fed two boxes of your tablets mixed with feed. Before using tablets got only 12 eggs a day—afterward 30 to 36 eggs a day. This was within three weeks. After feeding the tablets six weeks got 50 and 60 eggs a day and in the coldest weather in winter.
MRS. ELMER HOTTMAN, Ridgeway, Wis.

Best Tablets Made.

The Buttermilk Compound Tablets I think are better than the common tablets. I got more eggs within two weeks after using them. I have some other tablets but the "Buttermilk" are the best. I fed three boxes last winter. My flock did not have the Roup. Will send for more tablets.
MRS. WALTER ELLIS, Gypsum, Kans.

30-DAY FREE TRIAL

Because I want one million new users of these wonderful tablets I am willing to send you a big double size box if you will just write me. Your name and address is all I need. Use a postal card if you wish—I'll send the tablets by return mail, post paid. You use the tablets 30 days then report results to me. If you are not satisfied in every way—if you are not more than pleased—the tablets are to cost you nothing. But if you do find that you get many, many more eggs—probably three to five and even seven times as many—and your flock is healthier than ever before—full of pep and strutting around with healthy red combs—the tablets cost you only $1.00. No matter what you have tried before, I want you to remember that my secret formula is absolutely different from anything else—that it has been known to succeed where others failed. Not only that—you must remember that I send you a big double size box—nearly three time as big as the ordinary box of tablets.

At any rate, the risk is all mine. You can't afford to pass up this Special Introductory offer a single minute—it may never be made again.

Send No Money — Just Write Me, That's All.

All I need is your name and address—just put it on a postal card or use the coupon below—I'll understand and send you the tablets post paid by return mail.

MILK PRODUCTS CO.,
R. C. Combs, General Manager,
668 Creamery Bldg., Kansas City, Mo.

As per your offer send me your big double size box of Combs' Buttermilk Compound Tablets. I understand I am to use these tablets in a thirty days' test at one dollar the trial package, and if not satisfied, they are to cost me nothing.

above or beyond the trap, and so arranged that the animal will have to step into the trap to reach the bait.

The muskrat is one fur-bearer that is familiar. A greater number of this little animal is taken during the fur season than any other kind of fur-bearer, and it is probably one of the easiest fur-bearing animals to trap. They live in marshy, sluggish places and along streams and ponds. One of the most common methods of trapping muskrats is to locate their slides on the banks and set traps under a couple of inches of water directly beneath the slides. The trap should be staked in deep water so that when the animal is caught it will drown. The sliding pole is a very good method of fastening the trap. Get a long sapling and trim it of its branches, except a few at the small end. Slip the ring of the trap chain on to the sapling, the small end of which should be slanted down into deep water and the other end securely fastened to a stake driven into the bank. The animal when caught will invariably dive into the water, the short trap chain will prevent him from rising to the surface and cause him to drown.

Another way is to get a log and cut shallow notches into it just wide enough to hold a trap. Set a trap in each notch and cover lightly with dead grass and leaves. A few small pieces of sweet apple, carrot, etc., may be scattered along the log as a bait. The log should be moored to the shore or anchored in the pond. The trap chains should be fastened to the log.

The skunk is another good fur-bearer for the amateur to practice on. They, too, are easily trapped, as they have no fear of man and are not at all suspicious. They make their homes in holes in the ground, hollow logs, under old outbuildings, hay mows, etc. The best way to trap a skunk is to set a trap in the entrance to its den. If you can find no den and there are skunk signs about, fasten a mouse or a piece of tainted meat to a tree or stake a foot from the ground and set a trap directly beneath. Skunk often travel along old fences, and this is a good place to set traps. Hang a piece of bait on to the fence and set a trap under the bait. Cover lightly.

Always leave the surroundings of your traps looking as natural as possible. The less visible signs you leave along your trap line, the better success you will have in catching the animals.

S. THOMAS.

Boys' Letters

Hoard's Dairyman Juniors:—I live on a farm of eighty acres. We have twenty-seven cattle and three horses. We have one pure-bred cow and bull, also one pure-bred heifer, and the rest are grade Holsteins. We are milking eleven cows at present.

We have some good ensilage this year.

I am twelve years old and in the eighth grade in school.

Last year I planted some field corn and some beets and lettuce.

Massachusetts. Henry J. Hartness.

Hoard's Dairyman Juniors:—I have been going to school so have not had time to write. I am in the 6th grade at school. I have $1.98 worth of tomatoes from my garden and have about two bushels of turnips and two of potatoes and one stack of beans. My mother bought a Guernsey cow and calf. The cow gives good cream. My brother milks the cow. I milk four and my father, five.

I will answer any letter from any of the juniors. My address is Reiter, Maine.

Horace Hopkins.

Hoard's Dairyman Juniors:—I live on a 50-acre farm. We have there milk cows. Two are Jerseys and one is a Holstein. I have one pure-bred heifer that is a Jersey. I have one filly which is two years old. We have four head of horses.

Missouri. Henry S. Howell.

Hoard's Dairyman Juniors:—I received the fob, creed, and button and was very much pleased with them. I have a pet pig. She is about five months old and I call her Wiggy.

I live on a 320-acre farm. Papa has about thirty head of cattle. We milk four. Papa has eleven head of horses and three sows with little pigs and some other hogs, too. I am thirteen years old and in the 7th grade.

Illinois. Tiny Hays.

Hoard's Dairyman Juniors:—My father has taken Hoard's Dairyman for many years and I like to read the junior letters. We live on a 160-acre farm and most of it is under cultivation. We have two silos and I think these are very good things to have.

I am thirteen years old and am in the eighth grade at school. We have a very good teacher. Her name is Miss Roeder. My brother and I have joined the calf club and we each have a registered calf and wish that we could win the prize. We are all through threshing and filling silos and have half of the one fed. We have fifteen cattle; nine of them are registered and the rest are grades. If any of the juniors want to write to me my address is R. F. D. 1, Rockyridge, O.

Hazel Biehler.

Hoard's Dairyman Juniors:—I am a junior, thirteen years old. This is my first letter to the juniors. I live on a farm of 100 acres. We have five horses. Their names are David, Grace, Bob, and Bill. We have two mules. Their names are Maude and Kate, and also two ponies. Their names are Dick and Mable and a burro whose name is Beauty. I own a heifer and a sow. We raise quite a lot of young pigs. We have two silos.

Pennsylvania. Walter T. Fogel.

Hoard's Dairyman Juniors:—I am thirteen years old. I walk about a mile to school every day.

We have fifteen cows; three of them are mine. I have fifty Brown Leghorn hens. I take all the care of them. I raised eighty chickens last summer. I kept the pullets and sold the roosters for $27 which I put in the bank. I also have two ducks my father bought for me this fall.

I enjoy reading juniors' letters and would like to have some of them write to me. My address is R. D. No. 1, Windham N. Y.

Claude De Vere Cooke.

Hoard's Dairyman Juniors:—I have a good heifer but she is out of a fine grade cow. Her sire is Sayda's Fairmont Jap. We think him as good an animal as Sybil's Gamboge. But I hope that I can get a registered female calf soon by Jap, out of one of our cows.

I have to get up about 4:30 in the morning and milk five cows.

This being my first letter and being bed time, I will have to close.

North Carolina. Eugene B. Worth.

Hoard's Dairyman Juniors:—I have been intending to write for a long time, but I have been very busy since school started.

I am 13 years old and live on a 170-acre farm. It is really a dairy farm, as we have about 50 head of Jerseys, but we also have some hay crops and corn. We have 9 pigs now, 6 farm horses, 2 colts, a pony, and a pair of half Hackney driving horses.

My mother and I have been keeping geese this year and will get about $80 for those we sent to market last fall, of which I will get half.

We also have 15 Shropshire sheep. I have one Dorset ewe and I am very anxious to get another registered one as I like that breed best.

My brother and I have a young goat which we got when 3 months old.

I wish some of the juniors would write to me and tell me of their geese or sheep, especially Dorsets, as I love them very much. I shall be very glad to write them and give them any information I can. My address is Box 3, Newtown Square, Penna.

Sidney Page Seeler.

Hoard's Dairyman Juniors:—I am 16 years old and am only about 6 ft. high. I have a registered Holstein heifer. She is nearly all white. We are planning on building a barn in the spring. We have not room for all of our cattle in our barn now. We are talking of selling our hogs tomorrow. We have Chester White hogs. I will be very glad to hear from any of you juniors if you want to write to me.

Wisconsin. John Hodgson.

Hoard's Dairyman Juniors:—I live on a farm of 160 acres. I have a cow, a Shetland pony, and a dozen and one-half young hens. My pony's name is Daisy. She raised a colt which I sold last year and invested the money in a Liberty bond. We had a dairy sale in October. We sold twenty-four Holstein cows and fourteen heifers.

I am ten years old and in the sixth grade. My sister is thirteen and goes to high school.

I hope some of the juniors will write to me. My address is R. D. No. 7, Lawrence, Kans.

Rush Herriott.

Hoard's Dairyman Juniors:—I live on a 200-acre farm. We have 20 grade Ayrshire cows. Our bull is a registered Ayrshire.

We have 5 horses and one colt. Their names are: Molly, Kit, Prince, Fred, Jerry, and Junior. Junior is the colt.

I have nine pullets, three old hens, and one rooster. They are all Rhode Island Reds.

If any of the juniors want to write to me my address is Clover Dale Farm, Saco, Me.

Irving Scamman.

Dairymen's League in New Offices

The new offices of the Dairymen's League at Utica, N. Y., will soon be ready, and in a few weeks the main organization will move its headquarters there from New York City. The new offices are being prepared for a large force of clerical help to handle the pooling of the proceeds of the members' milk, when enough co-operative contracts are signed to make pooling operative. The contracts are coming into the League office steadily and there were at the end of the year 30,208 properly signed and on file, besides several hundred that had been returned for correction and several thousand still in the hands of local officers. When 50,000 members have signed, the co-operative contract and pooling will become operative.—LEAGUE NEWS.

Farm Bureaus Predict Milk Price Drop

Further reduction in milk prices is forecast by the farm bureaus of New York and Pennsylvania. This expectation is also shared by local cheese manufacturers. It is not expected that the cut will be more than a few cents a hundred, insufficient to affect the retail price of milk which is likely to remain at its present figure through the winter.

All indications point to no steadying influence in milk conditions during the coming month. Cheese factories are running at a minimum, due to the uncertain conditions, especially regarding the foreign exports. Large amounts of cheese from both these states are sent to Europe under normal times.

Pennsylvania. E. M. L. BLANCHER.

Iowa Breeders Meet at Ames

During Farm and Home Week at Iowa State College January 3 to 8, the Iowa dairy cattle breeders held meetings and officers were elected by each association. The Jersey, Holstein, and Guernsey breeders were represented, and all three associations passed a resolution asking for rigid tubercular testing of all animals exhibited at state, interstate, and national dairy shows. The following officers were elected: Iowa Holstein Breeders' Association: president, Z. C. Thornburg; vice-president, M. L. Henderson; secretary-treasurer, C. F. Jeness. Iowa Guernsey Breeders' Association: president, C. Mountain; vice-president, J. Golinvaun; secretary-treasurer, Albert Hyzer.

The Jersey breeders' association met but did not elect officers.

Iowa. H. W. BALDWIN.

There is a MULE-HIDE Roofing for every preference

Test Its Toughness

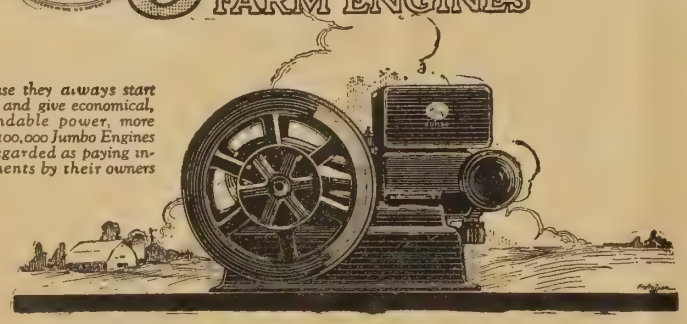
THERE'S A REASON, a big reason, for the permanency of MULE-HIDE roofs.

You will discover one of the reasons if you will take a sample in your hands and try to tear it—it resists your efforts. You must exert considerable force to make any impression on it.

Just so, it resists the force of the elements, and stands up year after year in a way that emphasizes its remarkable service record:

"Not a Kick in a Million Feet"

For dependability and permanency, select MULE-HIDE roof coverings. They are investments that pay big dividends.



If there is no MULE-HIDE dealer in your vicinity write to us direct, mentioning the name of your lumber dealer.

Farm Lighting

(Continued from page 17)

calcium carbide and water. Calcium carbide, or as it is more commonly called, carbide, is produced by burning together in an electric furnace a mixture of lime, (calcium) and coke (carbon). This product has a very great affinity for water and must be packed in an air tight container. It is nearly always obtainable in metal cans holding 100 lbs.

Acetylene

Acetylene generators are made in two distinctly different ways. In one type the water is fed to the carbide while in the other the carbide is fed to the water. Each type has its particular advantages over the other. There are probably more of the carbide to water plants in use than there are of the water to carbide. When water and carbide are brought together acetylene gas and a considerable amount of heat are generated. In the water to carbide type of generator this heat is localized to quite an extent so that certain parts of the machine may get pretty hot. In the carbide to water type exactly the same amount of heat is produced but it is absorbed by a large amount of water so that the temperature is not raised so much. On the other hand, the water to carbide type probably is a little more easily handled since a smaller amount of water is needed. Either kind of machine will give very satisfactory results if properly installed and handled.

Acetylene is made up of the two elements, carbon and hydrogen, in the proportions of 92.3 of the former and 7.7 of the latter. It is a gas which under certain conditions is powerfully explosive and burns with an exceedingly smoky flame. If proper precautions are taken in the installation and care of the machines they are absolutely safe. The board of fire underwriters has undertaken to say what these conditions and precautions shall be. Some of their recommendations are:

1. The generator shall preferably be located out of doors although basement locations are not prohibited.
2. They must be so located that they may be cared for without the use of artificial light.
3. They must be at least fifteen feet from a furnace or other flame if located indoors.
4. They must be so located that the water will not freeze.
5. They must be large enough so that charging at night will not be necessary and must have a capacity of at least one pound of carbide for each one-half foot burner.
6. The piping must be properly done and tested by competent persons.

One precaution which cannot be too often repeated is, never look for leaks in an acteylene system with a match or other open flame. The probabilities are that if you do so you will never know whether there was a leak or not. If these precautions are observed an acetylene lighting plant is as safe as any other system and the advantages over some are considerable.

Acteylene gas has a rather wide range of explosibility, that is, a mixture of acetylene and air anywhere between the proportions of 2 parts acetylene to 98 parts of air and 49 parts of acetylene to 51 parts of air will explode. To offset this danger, if it may be called such, it has been shown that in a room 10x12x8 feet with all the openings carefully closed a one-half foot acetylene burner would have to be left open for fifty-seven hours before the lower limit of explosibility could be reached. Again, due to its extremely unpleasant odor, it would be practically impossible to sleep in a room where acetylene gas was escaping. The quality of light produced by burning acetylene in a proper burner is probably the next best to sunlight. It is absolutely odorless and practically pure white. It consumes very little oxygen and does not require a globe or mantle.

Acetylene burners are entirely different from any other kind. They are made in the shape of a Y with small holes so placed that the two jets come together and make a flat flame. Burners are made in several sizes and known variously as one-fourth, one-half, three-fourths, or 1 foot burners accordingly as they use one-fourth, one-half, three-fourths, or 1 cubic foot of gas per hour. One pound of carbide will produce from four to six cubic feet of acetylene gas, averaging about five. Thus, one pound of carbide will keep a one-half foot burner going for ten hours. The different size burners produce about 12, 25, 37, and 50 candle power each respectively.

Acetylene burners may be lighted with a match but they are generally fitted with a small flint and steel or some sort of electrical device operated by dry cells, which will produce a spark that will ignite the gas.

Acetylene generators are made in small sizes and are frequently used as portable lamps. The quality of light and efficiency are about the same as in the larger stationary plant. The principle objection to these small outfits is the frequency with which they must be cared for and the unpleasant odor that is so noticeable when this care is given.

Acetylene is to all intents and purposes non-asphyxiating, at least there is no known case where death has been caused by inhaling it. This is probably due to the fact that the gas has such an extremely unpleasant odor that no one cares to stay around where it is unless it is confined.

An acetylene lighting outfit is as safe as any kind of lighting outfit when it is given careful attention by a person who understands its make-

up, but in incompetent or careless hands it is a dangerous proposition. Acetylene is used to a limited extent for cooking purposes. It gives an intensely hot flame but has to be burned in special stoves or at least in special burners. These stoves are fairly expensive and the gas is also quite expensive. The probabilities are that until further improvements are made the use of acetylene for cooking will not become very general.

[Editor's Note:—In a subsequent article Professor Tyler will discuss the use of electricity in farm lighting.]

Wintering the Brood Sow

(Continued from page 8)

place a part of the corn. Oats has a desirable quality of furnishing bulk to the ration so that this kind of grain is valuable for feeding brood sows. Sows fed oats generally eat less alfalfa or clover hay because of their bulky character.

The ration the brood sow should have is not always determined just by feeds on hand on the farm, nor the cheapness of the ration, for when healthy pigs are farrowed they can

A small A-house will provide a comfortable shelter for a few sows. During the farrowing season it can be used by one sow and litter.

be grown quickly into maturity, and the ration that makes this possible is profitable. Runty pigs of low vitality cannot be grown nor fattened easily.

The comfort of the brood sows should be looked after to some extent, but this will not require much time. A good way to control lice is to apply crude oil to the backs of brood sows, as the crude oil kills both lice and nits and destroys the eggs. Sleeping quarters should be cleaned frequently and filled with straw so that sows can rest easily. Ordinarily the sleeping quarters need not be exceptionally warm, but to offer protection from wind, rain, or snow.

Quakers Buy Cows to Provide Milk for Austrian Children

In order to relieve the shortage of cows in Austria and provide fresh milk for the small children of Vienna, many of whom have never tasted milk, the American Friends Service Committee of Philadelphia has purchased 450 cows from Switzerland and Holland and sent them to Vienna.

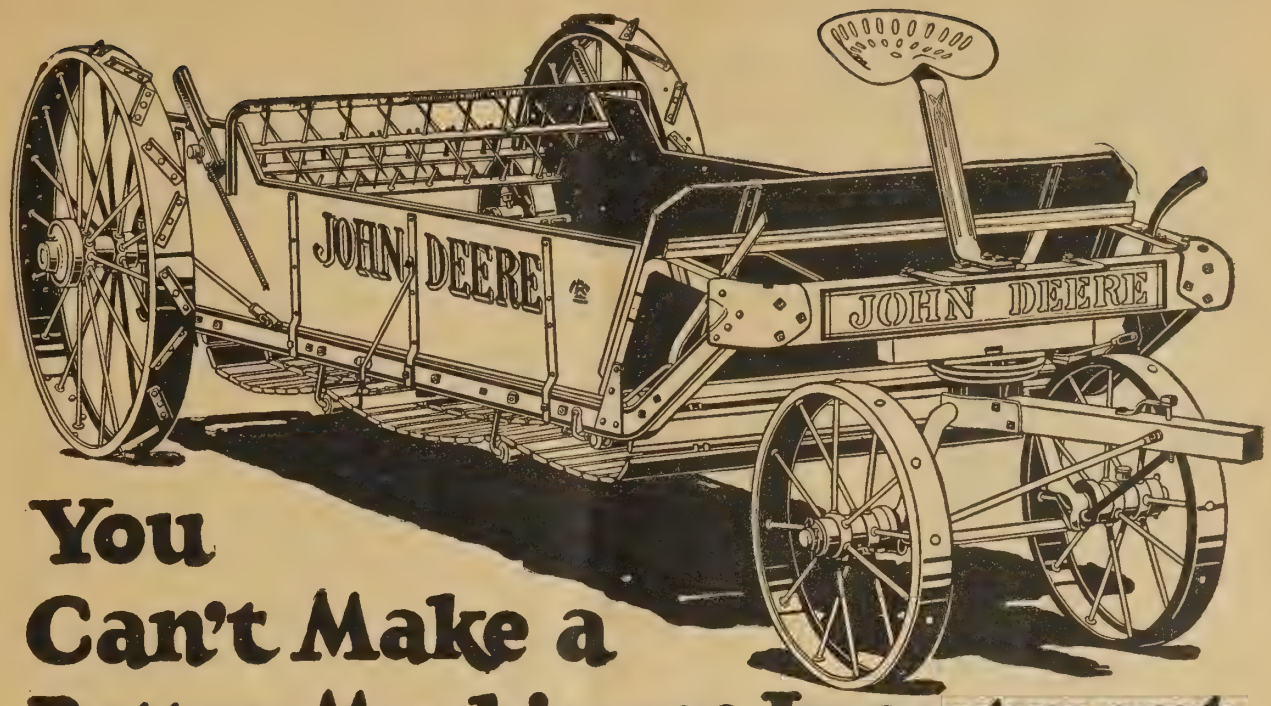
To insure the lowest prices and the healthiest stock the animals were bought directly from farmers. The services of Mr. Hartag, chief cattle expert of Holland, were loaned by the Herdbook Association and no commission was charged. Certified veterinary surgeons made the selection. The Dutch Government loaned motor cars to convey the cattle, and permitted both cattle and fodder to leave the country free of duty.

Many of the cows are pedigreed animals and all are in healthy condition. Four veterinary examinations took place before they reached Austria. When they arrived in Vienna the cows were placed in depleted dairies surrounding the city and arrangements were made for the dairymen to pay for the animals by delivering milk to the American Friends Service Committee for its child-feeding work. In 18 months the farmer will be able to pay for a cow with her own milk.

As there is not enough fodder in Austria to feed the cattle and make them milk-producing, it was necessary to procure fodder from England, America, Italy, and Czecho—Slovakia.

In order to give a greater incentive to milk-production American Friends Service Committee subsidizes the milk output to the extent of 1.70 kronen per litre (a trifle less than a quart), or about a cent a quart. This fixes the price of milk by the Friends in hospitals and for direct distribution to young children at about six cents a quart to the consumer. This is much less than the price of condensed and evaporated milk and the fresh milk is far more satisfactory to the children.

Dairymen will own the calves born during the time they have possession of the cows, but the cows will be the property of the American Friends Service Committee until they are fully paid for. They cannot be taken away, as the native ones have been taken, by the reparation clauses of the Peace Treaty.



Pennsylvania. F. W. NORCROSS.

Jersey Cattle Notes

For week ending Dec. 24:

Number of animals registered: Bulls, 181; cows, 504; total, 685. Number of transfers recorded: Bulls, 184; cows, 682; total, 866.

Thrift is the careful use of money and materials.

You Can't Make a Better Machinery Investment

This Big Book and Two Others —Free

"Better Farm Implements" contains 114 pages of valuable information on a full line of labor-saving farm implements. A book you will keep.

"Soil Fertilizers" tells all about barnyard manure, how to preserve it when and how to use it. Written by an agricultural authority.

John Deere Spreader booklet fully illustrates and describes the best implement investment you can make.

To get these books free, drop a line to John Deere, Moline, Ill., and ask for Package S-414.

IT'S the extra bushels you raise per acre that count most. That's where your big profits are. This economic law applies always whether the selling price of your products is relatively high or low.

To get the extra bushels per acre increased fertility of your soil is necessary above everything else. Here is where the John Deere Spreader fits in. It doubles the value of your most important fertilizer—barnyard manure.

JOHN DEERE SPREADER

The SPREADER with the BEATER on the Axle

The John Deere Spreader makes manure go twice as far. The same quantity fertilizes more acres more effectively because the manure is evenly distributed—that's the result you want.

With it you have instant control over the amount of manure you put on the land—you can spread heavy or light to meet the needs of the soil and the crop.

Only by using a good spreader can you successfully top-dress pasture lands, hay lands, corn, etc. Proper top-dressing has proved to be a mighty effective way to increase production.

A good spreader saves time—one man with a John Deere can load and spread as much as two men who spread with a fork. You will utilize every load of manure that is made if you use a spreader, because it takes only about one-half the time to load and spread manure.

There is no other machine that will pay for itself so quickly as a good spreader. It's a profitable investment at twice its cost.

Mechanically the John Deere is the better spreader. Go to your John Deere dealer and ask to see it. Notice its extreme simplicity—no clutches, no chains, no adjustments to make, only one large beater; a low-down easy-loading box combined with high drive wheels; the revolving rake that insures even distribution; the beater drive with gears enclosed in a dust-proof oil-tight case. The John Deere gives extra years of profitable service.

Standpat Methods Bound to Be Costly

HOARD'S DAIRYMAN:—In a few sections of our great country there are still a few farmers who keep one or more cows which they milk with one hand. In such cases the quart measure usually replaces the ordinary three-gallon covered milk pail used by the up-to-date dairyman. There are still a considerable number of farmers known as dairymen who persist in using a nondescript bull which is known down in the Piedmont country as the "Pennyroyal Scrub", probably because he can survive on the pennyroyal which grows on the mountain side, and doubtless also because he is royal to the extent of being worth about a penny. Then again in working among the dairymen one observes that many of them continue to employ the "scoop-shovel method" of feeding, and disregard to a great extent the feeding of grain in proportion to the milk yield. The good looking "Bossy" often gets the most feed when the little sway-backed "Spot" is much better bred, and only needs a fair chance to demonstrate her producing ability. Another practice that can rarely be justified is the "hand-to-mouth" way of buying feeds. The writer knows scores of dairymen, keeping ten or more cows, who buy a hundred pounds of feed at a time when they could save from $6.00 to $12.00 per ton by joining with their neighbors in the purchase of carload lots of feed.

A man may be ever so painstaking and conscientious about a certain dairy practice, but unless he takes the necessary precautions all along the line, and stops the big leaks, he will be "saving at the spigot and losing at the bunghole". It is said of Andrew Carnegie that he once offered to give $1,000,000 to the person who would devise a method whereby a ton of steel could be produced 10 cents cheaper than he was at that time producing it. More dairymen might well be actuated by that same principle which prompted the great steel king to put such a high premium on efficiency in every department of his vast enterprise.

In the past hundred years great progress has been made in the invention of new kinds of farm machinery, and in the methods of producing and handling crops, yet today there are tens of thousands who use the mower, binder, and manure spreader, but who fail to realize that by feeding high priced hay, silage, and grain to a 5,000-pound cow, they are going back fifty years to the scythe and cradle method of making milk.

The United States Department of Agriculture has just undertaken a novel piece of work. Pictures of cows of the 26th century B. C. found on Egyptian monuments have been made into stereopticon views and placed along side of pictures of scrub cows of today. They illustrate the fact: "Once a scrub, always a scrub." We are told that the wild cow of prehistoric times was a coarse, nondescript creature, possessing heavy shoulders and head and horns fitted for protection against wild animals; that this cow gave only enough milk to suckle her calf for a few weeks. Through the process of evolution, by the means of careful selection, breeding, and feeding, there have been developed a Tilly Alcartra with her yearly milk record of 33,424 pounds and hundreds of other cows that have produced over 20,000 pounds of milk and 1,000 pounds of butter in a year. Professors Larson and Putney in their book, "Dairy Cattle Feeding and Management", write as follows: "Dairy cattle breeding is both a science and an art. Until comparatively recent years it was merely an art. Recent fundamental studies in the principles of heredity have increased the proportion of science, and undoubtedly the future breeder will use more scientific principles."

Surely one can easily become enthusiastic over the great possibilities that are held forth by the dairy business. Of course it does not constitute a royal road to riches, but as reliable surveys have recently shown us, it promises a steady and fair income where brains are coupled with plenty of muscular energy.

The public has a right to expect that we are going to produce our product in a reasonable, orderly, and efficient manner, and we must have pride enough to do it.

West Virginia. E. J. PERRY.

VIOLET IV OF CORBINEZ
OWNED BY WADDINGTON FARM, WEST VIRGINIA

These West Virginia cows, one a Guernsey and the other a Jersey, are not like their long ago ancestors whose outlines appear on the Egyptian monuments erected 4,500 years ago.

New Field Agent for Oregon Dairymen's League

HOARD'S DAIRYMAN:—The Oregon Dairymen's League has secured Richard G. Scott as field agent. Mr. Scott has been agricultural agent of Clackamas County for the past two years and during that time he has done much to encourage the use of better dairy stock throughout the county.

His work was endorsed at the annual taxpayers' budget meeting by his being re-elected as county agent. By Mr. Scott's resigning that position the Oregon Dairymen's League gains a hard worker and a man very much alive to the dairymen's interests.

Oregon. CLEON J. EMERY.

A Unique Announcement

It has remained for L. F. Graber, Secretary of the Wisconsin Alfalfa Order, to originate a new method of announcing the meeting of an organization. It comes as a holiday postcard with a spray of alfalfa laid across the card, with the statement that the Wisconsin growth of alfalfa was increased from 38,000 acres in 1918 to 62,000 in 1919 and to 97,000 in 1920. "This inspiring record," says the announcement, "prompts us to send you the season's greetings and to invite you to attend the annual meeting of the Wisconsin Alfalfa Order at La Crosse on January 28th and 29th."

Well over 30,000 Leaguers Agree to Pool

(Continued from page 23)

ers in complaints and in delivering milk to the dealers who refuse to buy of the League. Here clearly is a case for our county leadership to take a hand in righting matters. It appears today that the whole county membership is likely to take an interest in this one group. The farmers will have the right plan explained to them and most likely the local leaders where they are found wanting will be asked to reform or resign. This is not unlike conditions in other counties. It shows that there is still much to do, but also that it is likely to be done.

After getting right out in touch with the real facts one readily comes to the conclusion that pooling is a coming fact. At home one gets to hearing the opposition say so much that he doesn't realize how strong the real sentiment is in favor of the League's proposal. This is because the proposition comes from the farmers' own organization. The counter propositions to "scrap" the contract are understood to come from those who are unfriendly to farmers' organization and therefore they tend rather to accelerate than retard the signing. At the same time it is coming to be realized that more real personal work must be done. In almost all localities there are men who are really alive to the seriousness of the situation, and who are willing to put in a good bit of sacrificing work.

New York. H. H. LYON.

New York Butter Market

NEW YORK CITY, JANUARY 11:—There is considerable agitation in the market at the present time over the effort on the part of several national dairy organizations to secure an advance in the tariff rate on dairy products. The New York Mercantile Exchange is today represented in Washington by a committee which will advocate an advance of 3½c per pound in the tariff on butter shipped into this country from outside sources. Opinions, however, seem to vary as to the advisability of a tariff increase. Receivers remember the instability of the butter market during the spring months of the year 1914 when the revised tariff on butter became operative. The revision was from 6c down to 2½c. Immediately after the new tariff law became effective, there was an influx of butter into this country from Siberia, Finland, Denmark, New Zealand, etc., with the result that the market became badly demoralized and prices fell to very low levels. While the butter that has been imported during the past few months has caused no great inconvenience, although some speculators have been caused to lose money because the trend of prices have not been upward of late, it is feared by many receivers that the conditions of 1914 may be repeated unless the tariff rate is changed. There are few, however, who feel that the emergency tariff bill now before Congress will ever become a law.

In spite of the fact that butter in excess of 30 million pounds has been imported during the past year, its effect has not been seriously felt. It is very doubtful that it has had much effect on butter values. It is true that there have been temporary breaks in values immediately following the arrival of particularly large shipments of Danish butter, but it is very probable that the price trend in general would have been downward to some extent regardless of butter importations. As a whole, consumers are curtailing their purchases to a marked degree. There might have been a tendency for higher prices in case no butter had been imported, but the probability is that any marked advance in price would have been neutralized by a cessation of buying on part of the consumer. Money is not so plentiful as in the years just passed and the consumer is much more conservative in buying. The importation of Danish butter, while working some hardship on the producer of butter of inferior quality and the speculator, has undoubtedly made it possible for people in moderate circumstances to purchase butter for table use.

During the closing weeks of the old year, the butter market gradually gained in strength and there was a conservative advance in values. Immediately following the holidays, although there was no logical reason for it, there was a sharp change in sentiment, buying practically ceased for several days and there was a sudden price decline of 3½c, that decline materializing on Saturday of last week. The decline was undoubtedly largely due to psychological causes. Daily receipts of domestic butter have been moderate and very little foreign butter has been received. However, there is a feeling that there must be a January price slump and buyers hesitate to purchase their full quota of goods because of that. At the outset of this week, buyers realized that their fears were unfounded and began to make conservative purchases with the result that the market has strengthened and prices advanced ½c today. It is very probable that the market will continue to gather strength during the next few days and that we will see other price advances. Established quotations are: Extras (92 score), 53½@54c; higher scoring than extras (93 score or higher), 54½@55c; firsts (90—91 score), 48@52c; firsts (88—89 score), 44@47c, and seconds (83—87 score), 36@42c.

A somewhat nervous feeling has developed in the market during the last few days because of a report that a steamer bearing approximately two million pounds of Danish butter has left Copenhagen with this country as destination. As that butter will not become available for fully two weeks, its probable effect will not be a certainty for at least that length of time.

W. B. LIVERANCE.

League Acquires Country Plants and a Distributing Station

The Dairymen's League Co-operative Association completed a deal, effective January first, acquiring the large creamery plant at Mansfield, Pennsylvania, the Seeley Creek, New York, condensery, and the Essex distributing plant for distributing fluid milk at Essex, New Jersey. The total purchase price was $467,000.

This property is now under the ownership and supervision of the Dairymen's League. Its acquisition is directly in line with the plans of the association to slowly acquire efficient country milk stations, manufacturing, and distributing plants so that the farmers will not be left without a market for their product when dealers refuse to buy.—LEAGUE NEWS.

New York Holsteins Average $296

An average of $296 was attained at the three-day consignment sale of Holstein-Friesian cattle which was held in the Liverpool pavilion at Liverpool, N. Y., last week. Two hundred and thirty-three pure-bred Holsteins were sold for $69,050. The highest price, $2,400, was brought by O. K. L. Bessy, daughter of Ormsby Korndyke Lad. The sale was directed by H. A. Moyer. Mr. Moyer sold 37 head for a total of $24,985, an average of $675.

Buyers attended the sale from as far west as Wisconsin and Michigan. A majority of the heaviest purchasers came from outside the state. A. G. Dysher of Pennsylvania led the bidding each day. He paid $9,000 for 14 animals. Mr. Dysher was the purchaser of the top cow, a sister of O. K. L. Pearl Tula and O. K. L. Audice Posch, butter and milk champion of New York.

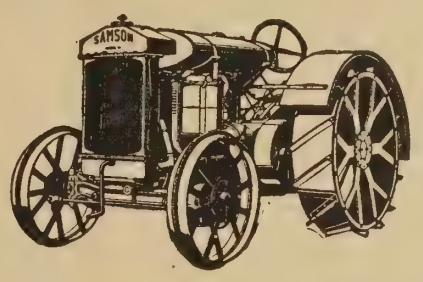
It was the opinion of breeders present that good prices were secured. It was also felt that stock was not suffering appreciably from price deflation. Bob Haeger said he had been selling steadily since September 1 and had seen few indications of any great depression in the pure-bred Holstein business.

Pennsylvania. E. M. L. BLANCHER.

Michigan is the first state to offer a reward for planting nut trees beside highways. In Europe the profit from roadside nut trees assists in maintaining roads. Roadside nut trees abroad are protected from vandalism by public sentiment, and this is true of the nut orchards in the principal centers of production in this country.

Your Profits Depend on Your Farming Methods

A comparison of horse and tractor operating costs presents many startling facts for the progressive business farmer of today. If you are a horse farmer it is difficult for you to fully appreciate the value of power farming for the simple reason that it is hard to visualize the added advantages to be derived from new methods.



It is hard for you to figure cost of operation. It is hard for you to see and reduce the advantages of deep, quick plowing, of rapid discing and planting and fast harvesting into dollars.

It is easy to overlook inefficient and costly horse methods and at the same time to discount the tractor's many advantages. But this year the problem confronting you calls for a careful investigation of crop production costs.

You can no longer dodge the issue. It is either low cost efficient power farming or high cost slow horse methods.

The Samson Model "M" tractor has lowered operating costs on thousands of farms during the last year. Samson farmers made a profit this last year even though market conditions are low at the present time. If they had operated their farms as in previous years with costly animal power they would have been more than discouraged.

It is up to you this minute to decide whether you are going to fortify yourself for the coming season, so that your labors will show a profit. Let us show you how you can do this with the Samson Model "M" tractor—low cost power for your field work—your belt work—wherever you need power on your farm.

Write Us—Let Us Go Into This Question With You

We have much more information on this subject of lowering farm operating costs. It's yours for the asking without cost or obligation. Drop us a postal card today.

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Some Causes of Sterility

When a heifer fails to come in heat from birth examination by an expert may show that she is hermaphroditic, or in other words possessed of imperfect generative organs of each sex. Of this character usually is a female twinned with a bull, and commonly called a "free martin" heifer. The bull of such twins is fertile and so are twin heifers and twin bulls. It is possible, too, for a calf to be born barren although not a hermaphrodite, but such cases are rare.

When a heifer comes in heat regularly at normal intervals of 21 days yet fails to conceive when bred to a bull that is known to be a sure calf-getter, her vagina, womb, and ovaries should at once be examined by a qualified veterinarian capable of determining abnormal or diseased conditions and applying appropriate treatment for their removal.

One of the causes of barrenness found present on such an examination is the presence of a web or fold of fleshy membrane stretched across the vaginal passage. This is termed a "persistent hymen" and must be opened up by the veterinarian before conception can take place. One method of operating is to cut off a fold of the membrane with an ecraseur such as is used for castration. One of the most experienced veterinarians of England (Thompson) states that cases of persistent hymen are most common in white heifers, notably of the Shorthorn breed. With us the condition seems to be comparatively rare.

Other mechanical obstacles to conception are growths (polypi) of the vaginal wall and adhesions of the os (mouth) and cervix (neck) of the womb requiring an operation as does twisting (torsion) of the cervix, a condition most often discovered when a cow is unable to calve. A diseased condition of the vagina (infectious granular vaginitis) is another possible cause of barrenness.

If service be long postponed after a heifer repeatedly has come in heat generous feeding may cause her to fatten and become barren from fatty degeneration of the breeding organs. This condition may also result from overfeeding and prolonged over-fat condition of show cows. In such animals, too, it is possible that acidity of the secretions of the womb and vagina may prevent conception by destroying or weakening the vitality of the egg (ovum) of the female or sperm cells (spermatozoa) of the male.

Temporary barrenness in some instances occurs as a result of a severe attack of any serious disease or even the effects of a long railway journey, or marked change of locality, attitude, feed, and water. Semi-starvation by retarding normal development of the generative organs and causing low vitality may also prevent coming in heat at the time when puberty should occur, or later, should the animal long remain weak, thin in flesh, and impoverished in blood. Such conditions also commonly prevent conception, although the heifer or cow may come in heat at normal intervals, or make her what breeders term a "shy breeder".

Sores

I have a cow that is affected with small sores on her front legs and sides. This cow is a Jersey, four years old. Have been feeding her ground corn with cob, and cottonseed meal and for rough feed shredded corn.

McMinnville, Tenn. R. G.

You should have described the sores, but we suspect they are ringworm spots commonly called "barn itch". If so, scrub the spots free of crusts or scabs, if necessary first saturating them daily with sweet oil. When clean, wet them once a week with a solution of 4 ounces of sulphate of copper (bluestone) in 1 pint of hot water. Write again if we have not rightly understood the nature of the condition present.

Warts

I have a valuable horse that has a large wart on his upper lip and one on his lower lip; have been there for some time. Please tell me how to remove them.

Lewisburg, W. Va. J. J. E.

It would be best to have the warts dissected out by a surgeon. If you cannot have that done and the warts have narrow necks, tie a fine cord very tightly around the base of each growth and then saturate them daily with strong vinegar or a saturated solution of bicarbonate of soda. If the bases are not narrow, apply lard or vaseline freely to the sound skin and then lightly rub the warts with a lunar caustic pencil at intervals of 3 or 4 days.

Vomiting

We have a five-year-old Holsten cow that sometimes vomits. Will you please tell me what we can do to make her stop vomiting?

Manitowoc, Wis. F. D.

Vomiting always indicates derangement of the digestive organs when not due to some foreign body lodged in the tongue, throat, or wall of the stomach. It may also be due to an internal growth (tumor) or to an ulcerated condition of the lining membrane of the stomach. It would therefore be impossible for us to assign the exact cause and for that reason you should have a veterinarian make the necessary examination. Meanwhile we should suggest giving a change of feed, omitting silage and mixing a dram of subnitrate of bismuth and a heaping tablespoonful of powdered wood charcoal in the feed twice daily at first and three times daily if found necessary.

Tuberculosis

Kindly tell me if one can tell when butchering a pig if it has tuberculosis? Have heard that there will be lumps along the neck or flanks if it has. Is that true in all stages of the disease; or don't the lumps appear at once? Are these lumps solid or do they contain some fluid substance?

Kenyon, Minn. C. H.

The lymphatic glands are affected in tuberculosis and these are found below the tongue, between the lower jaw bones, about the throat, along the course of the windpipe, between the lungs and above the small intestines, on the web of tissue suspending these organs. Besides that, tubercular nodes are found upon the lining membrane of the chest and abdominal cavities and upon lungs and other internal organs. The nodes are filled with gritty, cheesey, yellowish substance. Pus sometimes is present in cavities in the lungs or liver. Not all of these lesions are present at one time, but one or the other of them or several of them are found in the affected animal.

Extra Teat

I have a pure-bred Holstein heifer calf two days old that has three well developed teats on one side. Should the center teat be removed?

Oneida, Ill. Z. S. C.

The extra teat should be amputated, and the sooner it is done the better. If a well marked duct connecting with a milk secreting gland tissue is found present, it should be destroyed by cauterization. If possible, have a trained surgeon do the work.

HOW YOU CAN BREED BETTER LIVE STOCK

Why lose money each year through abortion—through high-priced animals failing to breed—through animals dying at birth—through diseases and countless other causes when a little special knowledge of animal raising would stop all this, and put your live stock on a big-paying basis. The National School of Animal Breeding, through its famous home-study course, has taught hundreds how to breed more and better live stock, and how to increase their profits. Stop the leaks in *your* profits! A few minutes reading of this course each day in your own home is all that is required. Course is the result of long years of experience. Brings the school to the breeder. Written by experts. Our free book tells all about it. Send for it today.

Send Coupon for FREE BOOK

Economy in Production ← GUERNSEYS → Quality of Products

More than 10,000 official records of production have been completed by Guernsey cows. According to these records an average mature Guernsey will produce in one year 10,304 lbs. of milk and 512 lbs. of butterfat when given good feed and care. Guernseys combine heavy production with good size and ruggedness. Send for our free literature.

THE AMERICAN GUERNSEY CATTLE CLUB, Box H21, Peterboro, N. H.

"Get" of Pencoyd's Secret Marose

This bull won first prize, senior and grand championships at the New England Fair, Connecticut and New York State Fairs. His "get" (4-mo.-old calves) was first at The Eastern States Exposition and fourth at the National Dairy Show with thirteen "gets" shown. His heifer calf, Appletree Point's Dolly Dimple, was Junior Champion at New England Fair, first prize at Eastern States Exposition, and was Junior and Grand Champion female at Connecticut State Fair. His bull calf was unbeaten in all eastern shows and won at Waterloo and National Dairy Show. Write for prices on May Rose calves that combine type and production.

JERSEYS

Bull Clubs

We are in excellent shape to furnish several very high class Jersey bulls ready for service.
These bulls are out of Register of Merit dams with excellent records, sired by bulls backed with the largest production of the breed.
The World's Champion producing blood in these bulls insures their siring large cows of correct type and big profitable producers.
If you are in need of one bull or several bulls, we would appreciate your writing us about the quality and priced animal you need, and this will save time, money and correspondence.

AYREDALE STOCK FARM
F. W. Ayer, Prop., Bangor, Maine

Efficiency Jersey Bull

I am offering for sale a Roycroft Jersey bull dropped June 2, 1919, out of a Register of Merit cow with a record of 430 lbs., 10 oz. of butter as a three-year-old and sired by the King of Cloverland whose dam made a world's record with 1,132 lbs., 12 oz. of butter in one year. The King of Cloverland died of an accident recently and there are no more efficiency bulls of his blood lines for sale. This bull is an excellent individual in every way and will be sold under proper health certificate. The first check for $250.00 gets him delivered to any point east of the Mississippi River.

Bull For Sale—Born January 2, 1920

Dam:—A 22.62-lb. granddaughter of Johanna McKinley Segis. She has several good daughters in the herd with records up to 33.48 lbs. butter in 7 days and 112 lbs. milk in one day.
Sire:—A son of Molly Johanna Korndyke, former world's record 2-year-old with 30.62 lbs. butter in 7 days. Write for pedigree and price.

W. J. McROBERT, Waupun, Wis.

A Son of S. P. O. M. 36

for sale. He is 2 years old, a good individual and right in every way.
His dam is a 20-lb. daughter of a 20-lb. cow.
This is an opportunity to buy an excellent grandson of Sir Pietertje Ormsby Mercedes at a price that is right.
Write us at once.

Brown Bros., Waverly, S. D.

Here's Your Opportunity to Buy

A YEARLY RECORD BULL

Our 85 Yearly Record Cows and Heifers Average 753.49 Lbs. Butter and 17,525 Lbs. Milk

We can quote you on young bulls out of cows with good seven-day records and with semi-official records of from 600 to 1,000 lbs. Our prices range from $400 to $3,500.

These Calves are Sired By—

—King of the Ormsbys His dam, his dam's dam, and his full sister all have semi-official records above 1,000 lbs. His own dam has four records above 30 lbs. in 7 days and three above 1,000 lbs. in 365 days.

—King of the Sadie Vales His dam is a 38-lb. cow and both of his granddams are 41-lb. cows. His three, four, six, nine, and twelve nearest dams average over 31 lbs. in 7 days.

—Johanna King Segis His sire is a yearly record son of King Segis, and his dam is a 40-lb. cow—the first cow to produce over 500 lbs. butter in 120 days.

—Sir Inka Prilly Segis He is a 30-lb. son of King Segis. He has 20 daughters with semi-official records, and 15 are now on test.

If a saving of from $100 to $500 on a bull means anything to you, then write for our new price list which shows pedigrees of the bulls we have for sale.

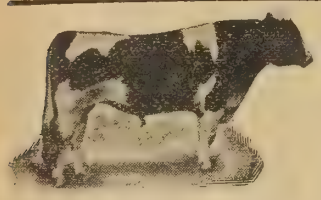
BUY DIRECT
Reasons for Buying Holstein Cattle in Waukesha County:



1. You can buy direct from the breeder through the breeders' association, organized by the breeders to promote the breeding of more and better Holstein cattle and to assist in a fair marketing of the same.
2. There are over 50 pure-bred Holstein sires in service in Waukesha County whose dams have records of over 30 lbs. butter in 7 days or 1,000 lbs. butter in a year.
3. There were 1,307 long-distance tests made on Holsteins in Waukesha County during the past year, which is more than the total in the next four leading counties in the state.
4. There are more tuberculin tested cattle in Waukesha than in any other county in the world.
5. The breeders' organization is in a position to put you in touch with "bred-for-production-stock" at reasonable prices.
6. When buying through the Association, you obtain the services of men who devote their entire time to the Holstein industry. It saves you time. You get more for your money.

It will pay you to look into our high class listings.

LENAWEE CO. HOLSTEIN BREEDERS' ASS'N, ADRIAN, MICH.
L. W. Harwood, Sales Mgr. R. C. Curtis, Sec.

$225 Buys a Registered Holstein Bull — 14 Months Old

A good individual, large sized, perfect top line and about ⅞ white. His dam is one of my largest and best cows, with a large square udder and exceptionally straight top line. She has just completed a 7-day Official test, making 24.2 lbs. butter and 505.3 lbs. milk. His sire is a 29-lb. bull of good breeding and individuality.

A Bargain for Someone

I have also some very choice bull calves of excellent breeding from dams with A. R. O. records of 20, 23, 24 and 26 lbs. of butter in 7 days.

I. M. SHORMAN, Route 4, Fowlerville, Michigan

ZEHRINGHURST HOLSTEIN FRIESIANS

A Few Splendid Young Bulls

for sale that have show ring type, that are backed by 7-day and yearly records and by the best productive breeding in Ohio. They are from an accredited herd, are guaranteed right and are priced to sell.

Zehringhurst Farm, Germantown, O. Oscar O. Zehring, Prop.

Northern Illinois Live Stock Breeders' Ass'n will hold its

Annual Sale
of Pure-bred Holstein Cattle

at the Emerson-Brantingham Carriage Works, So. Main St.

Rockford, Ill., Sat., Jan. 29th

Sale Commences At Noon

50 Head of Hand-Picked Holsteins — 40 Females, 10 Males

MEADOWSTREAM FARM consigns 6 cows, fresh or heavy springers, in calf to Carnation McKinley Segis Fayne who is a brother to the world's champion junior 2-year-old heifer. Also 6 heifers, daughters of this 33¼-lb. bull.

PINEHURST FARMS consign several cows, milking or heavy springers, in calf to a 29-lb. son of King Pieter. Also several daughters of this bull.

Many others of equal merit consigned by other Illinois breeders. An opportunity to buy exceptional foundation animals at your own price. Now is the time to start in the pure-bred Holstein business while the price is low. The pure-bred is better than the grade.

S. T. Wood, Sale Director. Col. J. E. Mack, Auctioneer.

DISPERSION SALE
Woodlawn Home Farm Herd of Holsteins

Woodlawn Home Farm Is Sold. Every Holstein In This Herd Is Included In Sale.

Tuesday, February 15, Sterling, Ill.

To Be Held At The Heated Pavilion Of The Northern Illinois Breeders' Sale Co.

85 Females — 15 Bulls
BREEDERS' SALE

Every animal In This Sale Bred And Born On The Farm. This also applies to the dams and grandams of most of them. They will be sold in their everyday working clothes.

TUBERCULIN TESTED. 60-DAY RETEST

Our last annual test on this farm was 100 per cent clean. We hope the next test which will be held just prior to this sale will be equally as good.

INDIVIDUALITY

Strong, large, rugged cows of most splendid dairy type and conformation. Good judges have pronounced the daughters of Prince Hengerveld Segis in this sale as the greatest lot of large handsome dairy cows by one sire in America. No sale of equal size ever contained more animals of outstanding individuality than will be sold in this sale.

BLOOD LINES

The herd is strong in the blood of King Segis, Pontiac Korndyke, King of the Pontiacs, Aaggie Cornucopia Johanna Lad, Paul Beets and Pietertje Hengerveld Count De Kol through some of their best sons and daughters.

RECORDS

Have been made under ordinary herd conditions and include a large number up to 22 lbs. of two-year-olds and 30 lbs. at full age. Made under these conditions these records are no real indication of what these cows and heifers could do if properly fitted. It is not too much to say that as many great record prospects never before were sold in one sale by one farm in this country. This is a real opportunity to buy real prospects on which to make great records and the very best of foundation stock.

This Ad Will Appear But Once. Send For Catalog. It Tells The Whole Story.

Sale Begins 9:30 A. M.

Col. Perry, Col. Haeger, Auctioneers. S. T. Wood in the Box

Woodlawn Farm Co., Sterling, Ill.

HOLSTEIN CATTLE

C. H. Davies, Prop., Springvale Farm, Shipman, Illinois, writes:

"Nine years ago I purchased a two-year-old heifer and a five-year-old cow. Now I have a herd of 50 head, conservatively valued at $25,000. Where is there a business good enough to net a man $25,000 plus a good living for himself and family in nine years?"

Galvanized Wire

Smooth galvanized wire, handy and necessary about the farm. Suitable for fences, stay wires, grape vines and all purposes where enduring wire is needed. Put up in rolls of irregular lengths of from 50 to 250 ft. 9 gauge per 100 lbs., **$4.25**, 10 gauge, **$4.35**, 12 gauge, **$4.45**, 13 gauge, **$4.60.**

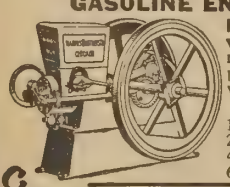
Barbed Bottom Hog Fence

26 in. High Per Rod 32c

No. LS8—Special barbed bottom galvanized hog fencing made of No. 11 top wire and No. 14 intermediate line and stay wires. Stays spaced 6 in. apart. Space between line wires from bottom upwards are: 3, 3, 4, 4½, 5½ and 6 in. 100 rods weigh 425 lbs. 26 in. high, rod, **32c.** 32 in. high, rod, **39c.**

By using two strands of barbed wire above this fence you can make a general purpose farm fence at very low cost.

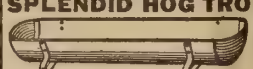
Porcelain Top Cabinet



Typical of thousands of other bargains in our complete catalogue of furniture, rugs and home furnishings. This is a splendid cabinet built throughout of figured light oak, nicely finished. White enameled canopy interior and white porcelain enamel metal sliding work top. Handy drawers, roomy cupboard—all latest time and step saving conveniences.

$29.95

No. LS25. Price **$29.95**

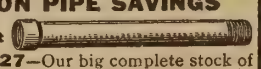


GASOLINE ENGINE BARGAIN

No. LS26—A splendid engine with Webster oscillating magneto. Develops full rated horse power. A sure starter and steady worker under all conditions.

Gasoline		Kerosene	
1¾	H. P. $49.50	3	H. P. $96.00
2½	H. P. 83.00	5	H. P. 126.00
4½	H. P. 110.00	7	H. P. 190.00
6	H. P. 170.00	10	H. P. 320.00

SPLENDID HOG TROUGHS

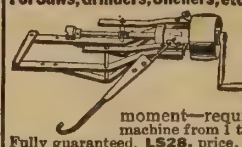


$1.00

No. LS27—The trough you have hoped and waited for. Can't tip—flared legs. Ideal individual trough for hogs and sheep. Capacity 3 gal. Size 30 in. long and 7 in. wide. Built of heavy indestructible steel. Won't rust or cave in. Painted black. Lots of 12, each **90c.** Lots of 6, each **95c.** Sale price each **$1.** Ask for prices on large sizes.

IRON PIPE SAVINGS

8c per foot



No. LS27—Our big complete stock of pipe offers wonderful values. Pipe in random lengths complete with couplings; all sizes now offered at unusual money savings. Suitable for the conveyance of water and all liquids. Order now. 1 in. pipe, per foot..... **8c**

Pipe in all other sizes, valves and fittings of every kind—world's largest stock at lowest prices.

POWER ATTACHMENT FOR FORD CARS

For Saws, Grinders, Shellers, etc.

$15.75

Use Ford Power for all your farm work. Most simple attachment designed for Ford machines. Slips into place —put on or taken off in a moment—requires no tools. Operates any machine from 1 to 15 H. P. All steel. Fully guaranteed. **LS28**, price..... **$15.75**

Big Capacity Concrete Mixer

$68.00 Special! We will furnish this concrete mixer and the 1¾ H. P. gasoline engine above for..... **$115.00**

Mixes a batch every minute. Capacity 3½ cubic feet. A fast, efficient, concrete mixer furnished for hand or engine power. Specially designed for farm work. **No. LS31**, each... **$68.00**

70 Egg Incubator, $5.45

Round like a nest—no cold corners or stagnant air pockets. Practically all metal construction. Complete glass damper. Uniform heat distribution. Water thermostat, simple regulator. Automatic ventilation. Everyone gets big results.

No. LS32
$5.45

Saving Labor

West Bend BARN EQUIPMENT

One Pull of the Lever Locks In 2 to 50 Cows

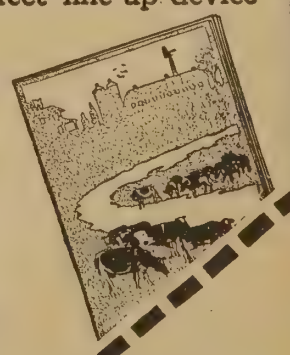
THINK of it! One move does the work of FIFTY. Instead of going from cow to cow and locking or releasing each one separately, you stand at the head of the line and throw the lever ONCE—operating all the stanchions and cow-stops simultaneously.

Our Special Patent

No other kind of barn equipment except the West Bend has this improved locking device. With ordinary equipment it is necessary to lock up and release each cow individually. With the West Bend Automatic Swinging Stanchions and one-lever control, two to fifty cows can be locked in place as easily as one. One throw of the lever operates the entire row of stanchions, no matter whether it is two, ten, twenty or fifty.

West Bend Equipment Your Best Investment

The West Bend way saves time, saves labor, avoids risks. You can release all the cows at once, then stand at the end of the line to see that they leave in a quiet, orderly way. Think how much easier, quicker, more convenient the West Bend way is. Yet, if necessary, West Bend Stanchions CAN BE OPERATED INDIVIDUALLY and, if desirable, one or more cows can be kept in the stable when the others are released. AUTOMATIC COW STOPS prevent the animal from putting its head in the wrong place. In addition, West Bend Stanchions have a perfect line-up device and many other valuable points.



West Bend BARN EQUIPMENT

The Line Includes

Automatic Swinging Stanchions
Individually Operated Stanchions
Cow, Calf and Bull Pens
Barn Supporting Posts
Manger Divisions and Complete Mangers
Litter and Feed Carriers
Litter Carrier Track Systems
Swinging Booms or Cranes
Automatic Water Bowls
Gravity Water Systems
Feed Trucks, Milk Stools
Farm Concrete Mixers
Etc. Etc.

West Bend Has Greater Features and Costs No More

West Bend Barn Equipment costs no more than "the other kind," but there is no comparison in convenience and labor saving features. Every article is made of the best material an with the best workmanship.

FREE Send Coupon TODAY FREE

Barn Plan Service

Send in the coupon properly filled out and we will mail you our handsome book on Barn Equipment showing the entire West Bend line. HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Volume LXI — FORT ATKINSON, WIS., JANUARY 28, 1921 — Number 2

The Denmark of Today

E. T. LEAVITT, IOWA

Co-operative creamery near Aarhus

"THE amount of butter which we will export to the United States in the future depends upon the price which your country is willing to pay and upon the rate of exchange," said Madsen Mygdal, Minister of Agriculture of Denmark, in answer to my question late last summer as to the prospect of increasing butter export. "We believe that England will always be our best market and when the government restrictions there are removed the demand will be sufficiently great to take all that we can produce. It is generally thought that the American dairy farmer can supply his own market cheaper than we can, although we have a commission over there investigating at the present time."

This same kind of an answer was given me by Professor B. Boggild of the Royal Agricultural College in Copenhagen. "It is the present rate of exchange which allows us to compete with your farmers on the New York market. With the kronen worth only half of what it was on the basis of the dollar, American buyers can afford to pay us the same price that the English government butter control allows. When the restrictions are removed in England I believe there will be no advantage in shipping butter across the Atlantic."

Butter for Coal

Denmark is buying coal from this country rather than from England. Fuel is very scarce at the present time and a large amount of peat is being burned not only as household fuel but in the boilers of the creameries and bacon factories and on the slower locomotives on the railroads. Normally large quantities of corn and oil cake are secured on our market and it is to their advantage to be able to pay for these products in American dollars secured from their butter. Unable to secure grain during the latter part of the war and unable to pay for it immediately after the war, the number of pigs in the country was about one-sixth that of the number in 1914. Denmark was forced to import bacon from this country instead of being herself an exporter as she had been previously. I was told, while in Denmark, that one large American packing firm which had imported $4,500,000 worth of pork during the past two years and, unable to bring the currency out of the country, had brought it back to this country in butter.

Nearly 14 million pounds of butter have come from Denmark in the last eight months. In the last forty years the annual total export of butter has arisen from 10,000 tons to 100,000 tons and yet this country does not have more than one-fourth the arable area of Iowa, neither does it have the black pay dirt of the corn belt. Agricultural Denmark has organized, specialized, and standardized.

POWER FOR THE VILLAGE WATER SUPPLY
Much power for grinding grain is furnished by windmills similar to this.

The First Co-operatives

In 1875, seven farmers started in Funen the first co-operative creamery. There were no others until 1882 when the Hjedding Co-operative Dairy was established from which the real movement started. "Now," says Professor Boggild, "only a very few of the 183,000 milk producers make butter themselves, nearly all of it being made in the 1,500 creameries, about 1,200 of which are co-operative. Nine hundred of these are equipped to make cheese.

"These co-operative dairies get their milk on an average from about 150 farmers receiving their milk from 800 cows. Many of the larger dairies which now have from 200 to 300 farmers and 1,200 to 1,500 cows were originally started by 50 farmers with from 200 to 300 cows. In nearly all of the dairies, the number of cows was increasing until the outbreak of the war in 1914. The principal rules upon which our organizations were based are: first, that each farmer bound himself to deliver to the dairy for a certain number of years, generally 10 or 15, all of the milk which he did not use himself; second, that the society provide for the transportation of the milk; and, third, that each member has only one vote regardless of the number of cows which he has.

"Every morning the carts, hired for that purpose, go about to collect the milk which is weighed and examined and put to cream separating immediately after its arrival at the creamery. A large part of the skimmilk is pasteurized directly after the cream has been separated and along with the buttermilk is returned to the farmers who in this way, in a few hours, are able to get this by-product from their own milk to feed their pigs, calves, colts, and chickens."

Dairy barn on large estate

Near Aarhus I looked in at a typical appearing creamery. It was equipped with a large separator, flash pasteurizer, and a churn similar in appearance to those in this country. The manager told me that this association had 150 members with 1,200 cows and the longest distance that milk had to be hauled was less than two miles. They were making nearly four and one-half million pounds of butter annually.

A Market Milk Plant

An interesting visit was made to the Trifolium Estates Dairy in Copenhagen which supplies over half the market milk of that city. Milk is sent here only from estates on the island upon which the city is located as it is shipped in twice every day. This co-operative organization is made up of owners of the larger estates all over Denmark. They milk 200 or more cows each and operate the largest creamery in the country and secure milk from 10,000 cows. While it is required that all cream must be pasteurized which is to be made into butter for the export and even the skimmilk which is fed to pigs must be made safe against the possible spread of tuberculosis, only 3,000 of the 70,000 pounds daily output of milk is pasteurized. The herds, however, are inspected twice each month by a veterinarian and the milk is tested daily by the methylene blue test. Ordinary milk was selling at eight cents per quart and their best grade of pasteurized retailed at about twelve cents. The estate owners were re-

TYPICAL FARM HIGHWAY IN JUTLAND

JUTLAND CATTLE BY THE SEA

TYPICAL COUNTRYSIDE IN JUTLAND

Wisconsin Dairymen's Association

THE 49th annual convention of the Wisconsin Dairymen's Association was not largely attended, but it was well attended. The spirit of the meeting was one of service, a service not of words but of deeds and real accomplishment. It was largely the expression of that group of young men who serve as cow testers and who gathered at the convention in goodly numbers. These men brought out the real, every-day problems of dairy farming, and by interchange of ideas will be able to go home and better serve the thirty or more dairy farmers they each call upon each month.

The program was packed with good things from the opening address of welcome by K. L. Hatch to the closing remarks by one of Wisconsin's good cow testers. Professor Hatch discussed the somewhat demoralized condition of the dairy industry and the dangers now confronting us from imitation dairy products. He counseled the maintenance of a normal production of dairy products, improvement in their quality, and better marketing methods.

President Peterson was of the opinion that while the dairymen of the United States could not well be criticised for the advance they had made in breeding and feeding, they were indicted today for incompetence in marketing and in the quality of their product. The farmer of today is particularly concerned with marketing problems and he is investigating these with the hope of arriving at a solution that will in some manner benefit both producer and consumer. The dairymen of Wisconsin are in a particularly strategic position in this respect because they produce one-tenth of the milk made in the United States, and in particular manufacture 70 per cent of the nation's cheese. The problem of better cheese handling is now being worked out and it appears that all that is necessary is to get the story to the farmers of the state and convince them of its workability. Mr. Peterson made a plea for a more universal adoption of the cow testing association, suggesting the economic advantage of an association for every town and the employment of testers who would combine instruction with a measure of authority for the enforcement of sanitary regulation.

Drs. Healey and Eliason discussed the tuberculosis situation, telling of the advancement made in accredited herds and in area clean-up as well as the necessity of adequate appropriations to continue the work. The tuberculosis post mortem demonstration was well attended and the lessons learned will be carried to many sections of the state.

Miss Hoover, of the United States Dairy Division, told a most interesting story of the milk campaigns that have been staged in many cities, how consumers were interested, and how milk consumption was increased. We hope to reproduce the major portion of this address in an early issue, for the subject appealed strongly to those present as one solution of our present problem, the underconsumption of dairy products.

In speaking for the proposed cheese producers' federation, Mr. B. F. Sheridan stated it was founded on the rock of the production of a high quality product and its proper marketing. He is convinced that as the quality of the product is insured, consumption will largely increase. To secure this the producer must benefit. Agencies are now at work for the accomplishment of this ideal and we hope to give larger publicity to this subject.

The economy of proper feeding was emphasized by Professor Humphrey and, like all talks on feeding, the subject aroused considerable discussion. It pays to buy feed for cows that will respond and pay a profit; the others are as a mill stone around the dairymen's neck. Each cow is a problem in herself, and to secure the largest profit cows must be fed as individuals and not just as a herd. Professor Eckles reiterated this same story in his address which we are to publish in a few weeks. He stated that in handling cows the first consideration was to feed and care for them well in order to demonstrate their right to retention in the herd. If the heifer failed to make good the first year, it had been proved that in the majority of cases she would never become an asset to her owner. One-third of the heifers raised on the farm fail to make good and should be discarded.

Wisconsin farmers, perhaps, fail to appreciate that the investigators at their experiment station hold first place in all the constructive nutritional investigation that has been done during the past twenty years. Several men should be given due credit, but it is without invidious comparison that we are able to say that Professor E. B. Hart, as head of the department, stands out as the chief. He has not only made important discoveries himself, but he has given encouragement and help to his assistants that they might achieve. Those attending the convention were given the opportunity of seeing experimental work in part completed as well as new lines of investigation being started that truth and knowledge might be gained. Restricted rations were first explained, and the results noted. They have found how to cause cows to abort or give birth to weaklings, and, contra wise, they have been able to show how this can be avoided. A pig was shown that was well grown, but whose legs doubled under him because his ration lacked the element found in skimmilk and legume hay. A chicken was shown that could not stand, while its mate was vigorous. The only difference in handling the two was that the vigorous one received indigestible material (in this case paper) while the other only had ground meal. This demonstration tour was well worth a trip to Madison, for it brings out the possibility of things to come.

The last day of the convention was primarily a testers' conference and for information and value was not excelled by any meeting it has been our privilege to attend. To attempt to reproduce in print the information and inspiration of this session would fill Hoard's Dairyman from cover to cover, and then fail to give all. Individual stories were told of how, through feeding better rations, the feed cost has been cut and profits increased materially. These young men are missionaries that are getting farmers to think, and they do not now answer, as did one man, "If I want more milk I get me more cows".

The city of Watertown invited the association "to come back home" for its 50th anniversary meeting next year and the invitation was accepted. It was in that city that on February 15, 1872, seven men met and formod the organization that has had so large and vital part in the advancement of the dairy industry.

The officers elected for the ensuing year are: Chas. A. Peterson, president; Professor Geo. C. Humphrey, vice-president; Paul C. Burchard, secretary; and Geo. McKerrow, C. L. Hill, J. Q. Emery and C. H. Everett, directors.

The following resolutions were adopted:

The Wisconsin Dairymen's Association in convention assembled at Madison, January 11—15, 1921, go on record as endorsing the work of the Wisconsin Dairy Council and urge dairy farmers, creameries, and cheese factories to support its work both financially and in every other way.

2. We believe that the manufacture in Wisconsin of filled milk should be prohibited and we urge the present session of the Wisconsin legislature to enact legislation to bring this about.

3. We view with alarm the invasion of our markets by dairy products from Denmark, Argentina, New Zealand, Australia, and other countries and believe that such a tariff should be placed on imports of dairy products as will assure that American dairymen would at least be placed on an equal footing with foreign producers in our own markets.

4. We urge the appointment of Hon. J. Q. Emery as Dairy and Food Commissioner. His long years of vigorous, faithful, and efficient service assure us that with his appointment the duties of this office will be administered with fairness and justice to all the people of our Commonwealth.

5. We believe that legislation should be enacted making it a misdemeanor to use in the advertising and branding of dairy substitutes descriptive terms or illustrations tending to mislead the public into thinking the substitutes are an actual dairy product; also, that corporations or firms who manufacture or deal in dairy products shall be prohibited from selling substitute dairy products such as oleomargarine, thereby taking from such substitutes the dairy atmosphere they unjustly enjoy.

6. We believe it to be the urgent duty of every Wisconsin dairyman to do his utmost to promote the organization of the Wisconsin Cheese Producers' Federation as we are convinced that this is the greatest movement ever advanced to promote the manufacture of quality cheese as well as to provide a more equitable arrangement for marketing.

7. We heartily endorse the tuberculosis control work carried on jointly by the Bureau of Animal Industry and Wisconsin Live Stock Sanitary Board, and we urge the legislature to make liberal appropriation for this work.

8. We heartily endorse the co-operative work done by our milk producers around Milwaukee and in our eastern and southern counties, and we take this occasion to call to the attention of the dairymen in other sections of the state that the practice of shipping milk to those large city districts at times that controversy exists has a very damaging effect without compensating rewards.

9. We desire to extend our thanks and appreciation to the State College of Agriculture for its hospitality in entertaining this convention and to the speakers who have given of their time that we might benefit.

CHAS. L. HILL
B. F. SHERIDAN
NANDER M. NELSON
Committee.

Washington, D. C., Weekly News

[SPECIAL TO HOARD'S DAIRYMAN]

WASHINGTON, D. C., JANUARY 18—Representatives of several branches of the dairy business of the United States had a session with the Senate Finance Committee on Tuesday last which resulted in dairy products being added to the Emergency Tariff Bill. Whether this bill becomes law or not is problematical, but this experience in presenting the case for the industry served at least as a dress rehearsal to the presentation which must be made later on to the Ways & Means Committee of the House when the regular tariff measure is being framed and considered.

Present at this hearing were representatives of various dairy industries, ranging from the milk producers interested primarily in the market for fluid milk, which is based very largely on butter prices and closely affected by fluctuations in butter and cheese demand, to representatives of the New York Mercantile Board of Trade, interested in butter and cheese as commodities to be dealt in, and used as the basis for commissions and brokerage. The cheese interests were least in evidence, only one section being represented; the producers of northern New York represented by Congressman B. H. Snell of Potsdam.

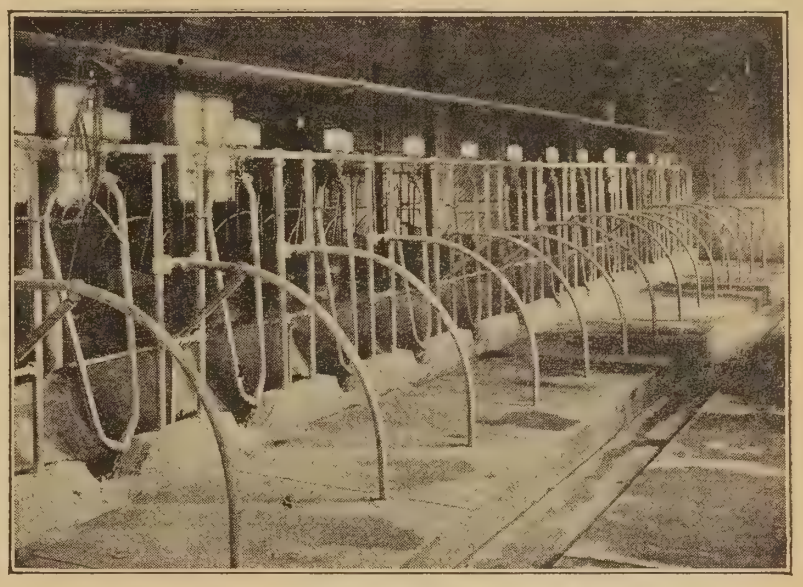
Before going before the Senate Finance Committee a session was held in the office of the Dairy Products Committee, of which John J. Farrell is secretary and Washington representative. The producing interests were invited to attend this conference where the situation was gone over somewhat in detail. The Mercantile Exchange representatives, and the American Creamery Butter Manufacturers, represented by Professor George L. McKay, stated that they had each agreed on six cents as the proper butter tariff to ask for. New England Milk Producers, represented by Mr. Bronson of Boston, stated that they were being seriously disturbed by Canadian imports of milk, cream, and butter, and showed figures making it plain that it required an eleven cent tariff to equalize cost of production of butter, and about five cents per gallon on whole milk.

At the hearing Senator Penrose did not appear, but Senator McCumber of North Dakota presided, and gave evidences of his sympathy and approval of the requests being presented. Opposition was manifest at all times by Senator Simmons of North Carolina, who is looked on as the leader of the opposition to this bill, or any other high tariff measure which is likely to come before the Senate.

Senator La Follette of Wisconsin indicated approval of the idea of a tariff, and asked many questions designed to bring out the volume of imports now coming in, differences in costs and conditions of production in foreign countries, and other evidence upon which a real reason for a tariff could be predicted.

He showed that the six-cent tariff asked for by mercantile interests was based largely on the difference in asking price in the New York market between Danish and domestic butter, and not on differences on cost of production. The only cost of production figures based on recent investigations were presented by Mr. Bronson, showing Canadian costs as compared with Vermont, New Hampshire, and Massachusetts. Professor McKay described pre-war conditions, and gave some reasons for the fixing of the six-cent tariff in the Payne—Aldrich law, and said that his organization which manufactures about one-third of all the creamery butter made in the United States, had adopted this figure as their basis for tariff request largely because it was the Payne—Aldrich figure, and they thought that European conditions were likely to soon return to pre-war levels of costs. Other speakers were E. B. Lewis of the Horton Ice Cream Co., Chairman of the National Dairy Products Committee; Albert T. Johnson of the Borden Co., who asked for a tariff of two cents a pound on condensed milk and five cents on powdered milk; J. D. Nichols of the Ohio Dairy Products Association; C. F. Gearon and Walter S. Fitch of the New York Mercantile Exchange; O. M. Camburn of the Massachusetts State Department of Agriculture; W. H. Bronson of the N. E. M. P. A.; M. D. Munn of the National Dairy

(Continued on page 56)



SHORT CUTS TO CLEAN MILK

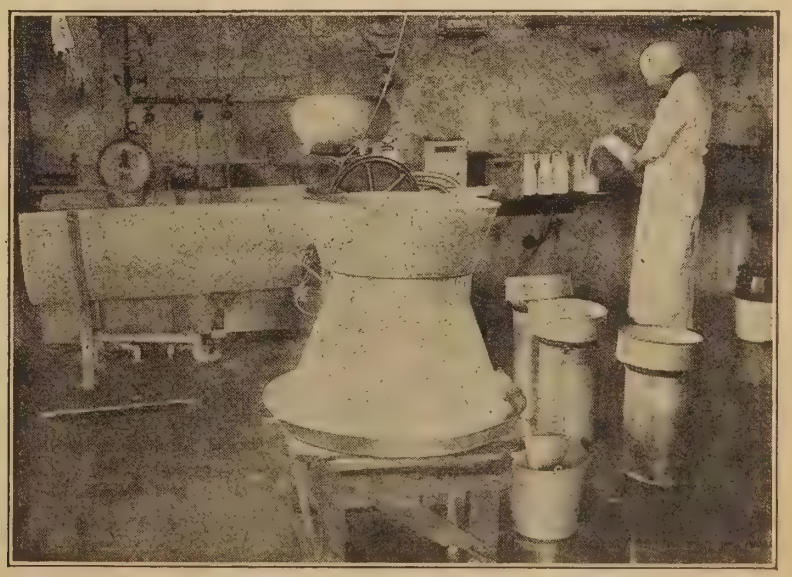
Illustrations of Simple Methods Used at the Kentucky Experiment Station in the Production of Milk Averaging a Bacterial Content of 1,323, as Reported by Professors J. J. Hooper and J. W. Nutter in Circular 24 of that Station

BARN AND YARD

The pasture extends almost up to the door of the barn. A gentle slope away from the barn insures good drainage and a relatively clean barn lot. The space around the barn is paved with crushed stone. The cows thus pass into the barn in a fairly clean condition. Numerous windows are provided.

INTERIOR OF BARN, SHOWING SANITARY STEEL STALLS AND CONCRETE FLOOR, AND THE ABUNDANCE OF LIGHT

There is a minimum of dust and dirt here. The cows are turned out in the daytime, even in winter, in order that the barn may be washed and cleaned.



Cleaning Cow:—After the cows have been put in stalls they are curried and brushed, particular attention being given to the hind legs and the parts near the udder. Long, coarse hair is kept clipped off the udder.

Milking:—The first few streams of milk from each cow are discarded as the first milk drawn contains many bacteria. Then the milk is drawn into a small-topped pail. No difference in bacterial count was noted between milk drawn by hand and that by machine.

Cleaning Cow:—The udder is washed and then dried to prevent chapping. Before milking, the udder is again wiped with a damp cloth, which prevents loose dandruff or hair from dropping from the udder into the bucket.

The Milk Room:—Note numerous steam connections and the large wash vat. The milk is quickly poured over the cone-shaped milk cooler, which is filled with crushed ice and water. It is then bottled. The concrete walls and floor are washed frequently and the room kept scrupulously clean.

From $22 Scrubs to the Ladder's Top

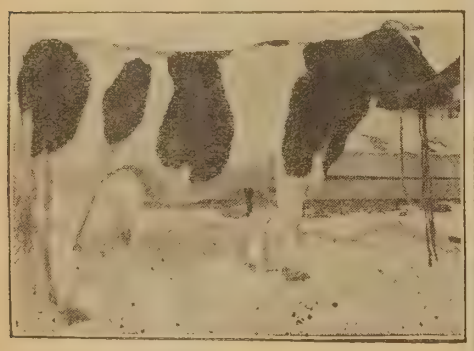
JOHN ERICKSON

THERE are a lot of self-made men on dairy farms, but not all have cause for pride in their handiwork. A few furnish stimulating example to all who now struggle for success with cows. They stand for something. Their experiences are insipiring and their attainments are "knock-outs" for "it can't be done" ideas. One of these is John Erickson of Wisconsin, who has come up from $22 scrubs to the top of the ladder among Holstein breeders.

John Erickson started at the bottom—away down where each step upward takes hard, grinding work. He began on a quarter section, now famous the country over as "Lone Pine Farm", when it was "so thin it wouldn't grow beans". Its unproductiveness had forced its two previous owners to give it up. He fills his own definition of a good farmer—"One who takes a farm and makes it gain." He built the first silo in the county. He has so improved his soil that last year the farm cut 125 loads of hay and supplied the "makin's" for two 14 by 40 ft. silos, besides other feeds. It easily produces enough roughage and grain for a herd of 40 dairy animals.

A number of scrub cows came with this farm. Erickson valued them at $22 a head and soon decided they were money losers and that grade Holsteins even at the double value of $50 were cheaper. Grades did not long satisfy, for pedigreed animals were bringing their owners an extra return through the sale of offspring that even the best of care and feeding could not secure from cows not registered. In 1893 he laid the foundation for his present herd by purchasing pure-breds. He borrowed $500 to make payment on 13 head which cost $90 each. From that beginning he built his herd, supplying a market which took 200 lbs. of milk daily when he began and 900 lbs. at the end of two years.

"I got my first real start in the Wisconsin Cow Competition in 1909—1911," says Mr. Erickson. "I found out what I had and, what was equally important, other folks found out, too." For this former owner of $22 scrubs won the $500 prize in a Wisconsin-wide competition for the 10 highest producing cows in the state. The average credited these ten was 678.6 lbs. of fat in 16,044.41 lbs. milk. The average feed cost for the ten was $101.33 and the average net return over cost of feed, $89.45. One was the fifth cow in the contest and two won the monthly Hoard's Dairyman prize for heaviest production for a month, Wisconsin Lass 2nd making 90.478 lbs. fat and Wisconsin Lass Johanna, a two-year-old, making 40.649 lbs. 250 days after calving. Perhaps the "real start" was made before this contest gave publicity to the herd, for all of the ten were bred on Lone Pine Farm and eight were sired by the great bull, Sir Piebe Aaggie Hengerveld. The yearly testing begun in 1909 has been continued and Mr. Erickson holds rank as a pioneer long-time test man. With the tests now under way, more than sixty semi-official 365-day records are credited to the farm.



Mr. Erickson made his biggest strike financially in 1915 when he bought the bull which has put money into the herd—Sir Pietertje Ormsby Mercedes 37th, whose dam and sire are now as widely known as any two animals of the breed. He paid $5,000 for "37th" when the dam—the now famous Spring Brook Bess Burke 2d—had only a moderate 7-day junior three-year-old record. He bought him because he believed in the dam—in her size, her conformation, and her breeding. That was before the blood of the sire, Sir Pietertje Ormsby Mercedes, had attained its present popularity. Erickson spent his $5,000, a big price in 1915, because he believed in the power of a sire from a good dam.

This bull, bred on the heavy-producing, big framed cows, developed in twenty years through the use of good sires and very liberal feeding, has given great uniformity of type and marked productiveness in the herd. Four state records have been made by these daughters. They have drawn admiring visitors from every section of the country—men who have given the owner of Lone Pine the severest test a breeder ever faces by offering tremendous prices for his best animals. His refusal of tempting bids and his decision to continue his breeding plans is a benefit to the future of the breed. It takes him out of the ranks of the unnumbered "cow dealers" and places him with that small group of men who have made worth while contributions to live stock breeding in America.

Forty daughters of "37th" have been dropped in the Erickson herd. Three of these are out of one of the greatest cows ever developed. With her produce she offers such an example of prepotency in type and production as is found in few herds. With the animals in her pedigree which have been bred on the farm, she gives Erickson undisputed title as a real constructive breeder of Holsteins. This cow is Wisconsin Fobes, a granddaughter and a great granddaughter of Sir Piebe Aaggie Hengerveld, the bull whose get brought home the $500 prize in the "cow competition". Her dam and sire and her two grandams were bred on the farm, she was bred there, as were her five daughters and two sons, her granddaughters, and great granddaughters. This group is the consumation of a quarter of a century of far sighted management; it represents a life work. If Lone Pine Farm had produced no other animals than those in the six generations of the Wisconsin Fobes family, its contribution to the breed would yet rank it among the greatest breeding institutions so far developed in this country. This great cow has five A. R. O. daughters, as illustrated on this page; three of them are by "37th", as are her two sons, one now at Lone Pine and one, Sir Bess Ormsby Fobes, which was sold last summer for six times as much as his sire's cost five years before.

When John Erickson refused the prices offered by rich men for the get of "37th", he accepted the responsibility of further improvement of the herd. He took upon himself the task of so mating the animals that they may continue to give a good account of themselves through their offspring. The purchase of a sire was the first task of immediate importance. This selection was the more difficult because of the high quality of the females. Mr. Erickson selected what he considered to be the best bred bull available for the next cross—Marathon Bess Burke. The blood of "37th" is 50 per cent of that of Sir Pietertje Ormsby Mercedes and 25 per cent of Spring Brook Bess Burke. The bull selected to continue the breeding has 43.75 per cent of the blood of Sir Pietertje Ormsby Mercedes and 31.25 per cent of that of Spring Brook Bess Burke. The latter is the grandam of both bulls and is also the great-great grandam of "Marathon". Sir Pietertje Ormsby Mercedes is the sire of "37th" and appears three times in the pedigree of "Marathon", as grandsire, great grandsire, and as great-great grandsire. Mr. Erickson says of his decision to follow this line breeding, "If this cross goes wrong, you can't depend on breeding by pedigree."

When you have seen the quality and capacity of the herd and know the dairy wisdom the owner of Lone Pine has acquired in his successful climb from the bottom to the top rank as a breeder, you have confidence in the herd's future—that it won't "go wrong".

WISCONSIN FOBES AND HER FIVE A. R. O. DAUGHTERS, THE REMARKABLE FAMILY REPRESENTING A CONSUMMATION IN THE LIFE TIME EFFORTS OF JOHN ERICKSON

This famous dam is the central figure in the picture. She has produced 24,535.5 lbs. milk, 922.44 lbs. fat, in a year. To the left is Wisconsin Fobes 2d whose 7-day two-year-old record is 402.6 lbs. milk, 16 lbs. fat. Below, from left to right, are Wisconsin Fobes 3rd, 469.7 lbs. milk, 16 lbs. fat; Wisconsin Fobes 4th, 478.6 lbs. milk, 18.64 lbs. fat, as a two-year-old; and Wisconsin Fobes 5th, 518 lbs. milk, 23.74 lbs. fat, a state record for a two-year-old with first calf. To the right, above, is Wisconsin Fobes 6th, 392 lbs. milk, 13.48 lbs. fat, as a two-year-old.

THE HUMAN SIDE OF COW TESTING

Horace Evans, Tester for the Plainfield Association, Tells His Former College Roommate How a Good Member Was Built on Biscuits

July 10.

DEAR Mike:—I am already beginning to feel sorry for you. Though I have been at Plainfield less than two weeks and have not yet gotten acquainted with all the members of the association, I think any dairy student about to graduate without having had some experience as a cow tester needs sympathy. He simply hasn't gotten an important part of his education, that's all; and, if Prexy sees fit to hand you your diploma next June, I hope you will play fair with him and the University by getting a job with a cow testing association as soon as you can. Probably my place will be vacant in about a year, as I expect to go back for my sheepskin, and I'll recommend my job to you as postgraduate work. Meanwhile I am going to write to you from time to time about some of the members of our association, just as my contribution toward your education for a life on the milking stool.

I shall begin my letters where I began my testing operations, with Anson Wilbur. This is not because I wish to discuss the members of the Plainfield Cow Testing Association in a one, two, three order, but to give you a hint of some of the things that you will be up against if you take my place up here. The job of the cow tester, you will find, consists of much more than whirling 17.5 cubic centimeters of milk with an equal quantity of sulphuric acid. That, anyway, was the lesson which Anson gave me to carry around the rest of my cow testing days.

I thought I detected an unusually merry twinkle in William Kent's eye when he told me my duties would commence at the Wilbur farm. Now I know that he was enjoying what he considered a good private joke. Kent is president of the association, and in this capacity officially welcomed me to Plainfield, meeting me at the station and keeping me at his home the first night. Incidentally, he is a splendid dairyman, and probably I shall have more to tell you about him later.

"We have decided to let you start your route with Anson Wilbur," Kent said with that sly twinkle the day after I arrived. "Then you will finish up at my place. You see, the secretary lives near me and we thought that this plan would give us a good chance to talk over each month's work with you and take care of any business that is necessary. Besides, if there is ever a day or two of the month left after you have finished at all the members, I should like to have you stay with me until time to start out again."

I told Mr. Kent that I considered this a fine plan, thanked him for his hospitality, and thought no more about the matter that day. In the afternoon he took me for a drive about the Plainfield community, the plan being to reach Wilbur's in time for me to get ready for the evening milking. When at about the farthest point of the trip from our destination we were overtaken by a sudden storm, which soon developed into a downpour of uncertain ending. By means of mud chains and careful driving we finally reached the Wilbur farm, not long before the supper hour.

The proprietor did not seem greatly interested in seeing me. As I went up to the house from the roadside gate, where Mr. Kent had left me, I met Wilbur. His greeting was not calculated to brighten the gloom of the day one whit. He scarcely paused to make the hurried explanation that he was just setting out to bring the cows from the woodlot a half-mile away, and that it might be some time before his return, as he rather expected that he would also have to bring a new calf to the barn. "I guess you will have to make yourself at home the best you can," he said, leaving me. "I'll talk with you when I come back."

Though my welcome did not impress me as being particularly cordial, I resolved to give Wilbur the benefit of the doubt. Mr. Kent had carefully refrained from saying anything about Wilbur, so I proceeded as if everything was rosy. My first move was to go to the barn, where I selected a convenient place for my sample bottles and put the necessary utensils in readiness for milking time. As the cattle were in the pasture there was little to interest me in the barn, so I went to the house with the double purpose in mind of getting out of the rain and into togs more appropriate for the cow barn. My repeated knocks at the back door, however, brought no response. Then, glancing through the kitchen window, I saw unmistakable signs of bachelor housekeeping.

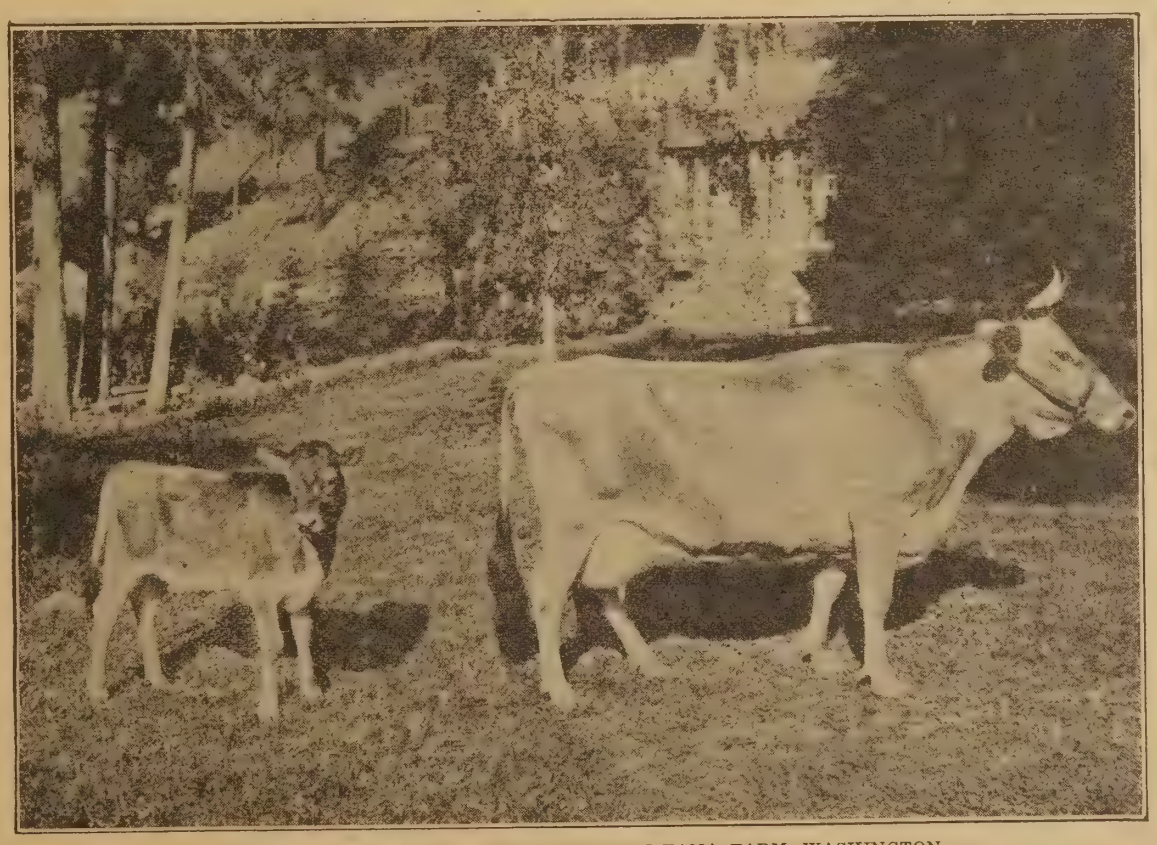
While the interior of the kitchen was uninviting, to say the least, it was dryer than outdoors so, contenting myself with my new host's injunction to make myself at home, I entered and sat down to await his return. I had just begun to reproach myself for not offering to help Wilbur bring up the cows when a feeling of hunger reminded me that it was past supper time. Then it occurred to me that if I couldn't make myself useful at the barn, I could at least help a little by getting supper. Of course, I know such an idea never would have occurred to you but, in the absence of sisters, mother provided for such contingencies by making the rudiments of cookery a part of my early training. So, like a hungry mouse, I began to rummage about the kitchen and pantry for edible materials, and though I met dirty dishes and all the other signs of bachelor life at every turn I soon had a meal well started.

A half-hour later Anson Wilbur, soaked to the skin and carrying the new calf on his shoulders, drove a motley mixture of red, white, and black cows into the barnyard, being closely followed by one anxious member of the herd. Perhaps he was the most surprised man I ever saw when, the animals stanchioned and the fresh cow safely stabled with her treasure, I calmly announced that supper was ready. It was clear that he had been taken off his guard, though this he tried to hide by saying in a matter of fact manner: "That's good. I expect this is a good time to eat, too," going to the house at once.

Smile all you wish, that supper nevertheless was a success. Of course I baked the potatoes, that way being the easiest. In the course of my explorations about the pantry I found some ham. This I sliced rather thick, frying it and then making a thick gravy. The bread supply seemed to consist only of a few hard crusts, so I kept up the search until I found all the necessary ingredients for biscuits. From the looks of the coffee pot I decided that whoever had been doing the cooking had not bothered to make a fresh brew for at least a week. Therefore I promptly cleaned it, ground some fresh coffee, and shortly an aroma of the drink was filling the kitchen that would tempt any man. As the finishing touch to my culinary labors I found a comb of honey that Anson evidently had taken from the beehive in the front yard.

Wilbur had little to say during the first part of the meal. For this I did not blame him. He was cold and wet, the chores were late, and in addition to all this I had come to bother him some more. He was eating supper with very evident relish, however, and after about the third cup of coffee had vanished down his throat he became somewhat more amiable. The biscuits, I noticed, had been disappearing with especial frequency, so rapidly in fact that I made potatoes serve as part of my share of the hot bread.

"You can cook, can't you? Where did you learn so much about cooking, anyway?" he asked, covering a half-biscuit with a piece of honey nearly as large, to which I explained that on occasions I had served as both daughter and son at home.



"Well, you certainly make some biscuits," he continued, as he reached for the last remaining one. "Why, I haven't had such biscuits since—well, humph, never mind..... I expect those cows are wondering whether they are going to be milked tonight." A moment later supper was over and, milk pail in hand, Wilbur was on his way to the barn, accompanied by his cow-tester cook.

He said almost nothing during the milking and, while permitting me to take the weights and samples, showed not the slightest interest in the work. Bedtime closely followed the belated chores, and I tumbled in that night frankly wondering whether I wanted to be a cow tester or not. In the morning Wilbur seemed slightly more agreeable, though still manifesting no concern in what I was doing. After the morning milking, however, he rather surprised me by his increased affability. "Say, kid," he asked as it came time for breakfast, "do you happen to know how to make pancakes? I have a feeling they would taste mighty good this morning."

"Sure," I replied hastily, as I was eager to do anything to break his apparently constant gloom. "They're easy."

Though I did not make an actual count, I believe that I made

(Continued on page 66)

GOLDEN LOUISE'S LOIS, OWNED BY GLEN TANA FARM, WASHINGTON

Golden Louise's Lois 331407, a descendant of those famous Jerseys, Ida Marigold and Stoke Pogis, completed a Register of Merit record of 14,936.7 pounds of milk and 841.39 pounds of fat, at five years and eleven months of age at start of test. At 4 years and 8 months she has an AA Register of Merit record of 10,848.7 lbs. milk containing 581.39 lbs. fat. She carried a calf 210 days of her last test, making her record all the more creditable, and qualifying her for the American Jersey Cattle Club Gold Medal.

The sire of Lois is Gertie's Stoke Pogis 29th, that has four Register of Merit daughters. The dam of Lois is Golden Louise 189225. She was bred by H. G. Woodward, Washington, and is owned by T. S. Griffith, Glen Tana Farm, Washington.

Lois was again placed on Register of Merit test June 1, 1920, and she has averaged over two pounds of fat per day in the first three months of her new test. Together with Lois is the heifer calf which she dropped May 20, 1920, two months after the completion of her last record.—AMERICAN JERSEY CATTLE CLUB.

Cow barn at State Industrial School, Waukesha, Wis.

"The once and for all" roofing—Asbestos

Stone from eaves to ridge-pole— Asbestos Shingled

HOW often do you expect to renew the foundation of your barn?

Never.

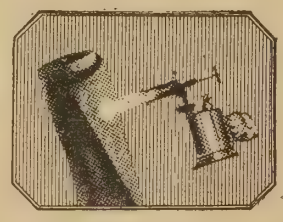
Well, you will not have to renew an Asbestos Shingled Roof any oftener. Both are of stone, and so they are both equally resistant to rot and disintegration. Johns-Manville Asbestos Shingles are made from asbestos rock and Portland cement, under tremendous hydraulic pressure. Strange to say they make a stouter and tougher roofing the older they grow because they take on a harder set with age.

Can a farmer afford them?

The best proof that he can is that farmers are applying them — all over the country. Remember, too, that if these shingles were not more economical than other forms of roofing, business concerns who view expenditure coldly, and the government which buys merit without partiality, would not specify them. If other business men can save money by buying this lasting roof—why shouldn't you? Johns-Manville Asbestos Shingles are not high in first cost, and need no special roof structure. In fact they can be laid right over the old wood shingles.

You may prefer some other form of Asbestos Roofing

You will find similar qualities in Johns-Manville roll roofing, as are found in the shingles. Atmospheric action, hot sun, winter cold, wet spells affect it no more than they would the stones in the field, nor do Johns-Manville Asbestos Shingles need the protection of painting or coating any more than these stones. And as to fire-safety—it is a commonly known truth that Asbestos is fire-resistant. Even the ancient Greeks realized this when they called the new found substance "Asbestos", which means "imperishable". Johns-Manville Asbestos Roofings are given the highest classifications by the Underwriters' Laboratories, Inc.



Your dealer will help you select Johns-Manville Asbestos Roofing

Your dealer will be glad to show you samples of the several forms of Johns-Manville Asbestos Roofing. He will advise you as to which kind is most suitable for your purposes. See him about it.

Segis Pietertje Prospect

ON the cover page of this issue appears the photograph of Segis Pietertje Prospect, the world's champion milk cow, with her feeder and caretaker, Carl Gockerell. A story of this Holstein cow's wonderful production was published in the Christmas issue of Hoard's Dairyman, her last few days' milk flow being estimated. The exact production with which she is credited in her 365 days of work is 37,381.4 lbs. milk, containing 1,158.95 lbs. fat. The following concise statements by Superintendent Malcolm H. Gardner in announcing the completion of this phenomenal record very well summarize the facts of interest to all owners of dairy cows:

"Segis Pietertje Prospect freshened at the age of 6 years, 8 months, 5 days. Her sire is King Segis 10th; her dam is Beauty Pietertje Clothilde. She was bred by G. V. Leighton, Idaho, and is owned by Carnation Stock Farms, Washington. Her best seven days' official production, made during the lactation period, is 686.4 lbs. milk containing 26.586 lbs. fat, this test being begun 6 days from freshening. Beginning 90 days from freshening she is credited with 858.9 lbs. milk containing 24.739 lbs. fat; at 122 days, 808.6 lbs. milk containing 26.544 lbs. fat; at 177 days, 745.4 lbs. milk containing 24.815 lbs. fat; and at 353 days, 572 lbs. milk containing 18.51 lbs. fat. In a 30-day test begun 337 days from freshening, she is credited with 2,529.3 lbs. milk containing 79.03 lbs. fat. She was under strictly official test for about one-fourth of the year. The enormous milk production is 3.956 lbs. milk greater than that ever before produced by any cow. With the fat production above mentioned she becomes the thirty-fourth cow to obtain place in the list of Holstein-Friesian cows producing above 1,000 lbs. fat in one year. Computed on the 80 per cent basis, the equivalent butter for Segis Pietertje Prospect amounts to 1,448.68 lbs."

$15,974.92 Saved by Co-operating

Polk County, Wisconsin, Creameries Make Good Profit by Marketing Their Product Together

IN five months in 1920 co-operation saved the creameries of Polk County, Wisconsin, $15,974.92. Just a simple plan of marketing together which cost nothing netted this tidy sum. Now these creameries plan further co-operative efforts by which they expect to net an annual saving of $60,000 to $70,000.

The chance boast of a commission firm's buyer gave these creameries their idea—in fact, stimulated nineteen of them into organizing the Wisconsin Creamery Association. This buyer said of the product of Polk County creameries, which was handled by his company for the government during the war, "We will make a nice piece of change on the butter from this county, on top of our commissions, by just using business methods in marketing the 3,000,000 pounds we will handle." Polk County's agricultural agent, John S. Klinka, heard the statement and immediately set out to discover just what the "business methods" were. If their use made "a nice piece of change" for a New York commission firm, he reasoned they might not be bad for creamery patrons.

Mr. Klinka soon found that it pays shippers to study freight rates. He learned the advantage of choosing certain routes to New York City and of shipping in carload lots only. So great is the possible saving that the commission firm was employing a man to give his full time to adjusting claims and gaining special rates on railroads. When Mr. Klinka had calculated the profit his county might make by the adoption of these "methods" in shipping its annual production of three and a third million pounds of butter, he called a meeting of representatives of the county's nineteen creameries.

On June 30, last year, representatives of seventeen creameries came together and agreed to carry on their business co-operatively. Accordingly the Wisconsin Creamery Association was organized for that purpose. The secretary-treasurer, Mrs. Lulu Matt-son, gives the association the following ambitious program:

"The association was formed by the co-operative creameries of Polk County to encourage better and more economical methods of production, distribution, storing, and warehousing of all creamery, dairy, and farm products; to secure better results in packing, advertising, grading, and marketing of the same; to buy, sell, deal, and traffic in dairy products on the co-operative plan; to buy supplies in a co-operative way; to cultivate a co-operative spirit in the community and between the different co-operative creameries; and perform any other work which would tend to the betterment of all members and the communities in which they exist."

The first work of the association was to begin to ship butter co-operatively. The local freight rate on 100 lbs. of butter from any point in the county to New York City is $2.155; on carload lots, it is $1.675. Instead of its members paying the higher rate on less than carload lots, the association assembled the output of enough creameries to fill a car and thus saved $.395 on each 100 lbs. after paying war tax, icing, etc. This small "piece of change" on a hundredweight gave a total for five months estimated at $15,974.92.

A minimum carload of butter is 20,000 lbs. A car is started at one creamery taking its consignment of butter. It is billed out with a stop-over privilege at another station central to other creameries. When the car is filled, the secretary of the association bills the car to a commission firm. This firm takes out the butter consigned to it, turns over the rest to the other firms to which different ones of the creameries may have consigned, and pro-rates the expense. This plan gives each creamery the opportunity to ship to its choice of firms, without affecting their shipping co-operatively. Each creamery gets paid for its own butter and pays its proportionate part of the expense.

The Wisconsin Co-operative Creamery Association has a capital stock of $10,000, the different creameries hold-

ing the $10 shares. An annual fee of $5 is charged each creamery whose sales total less than $100,000, and $10 is charged when the output is greater.

The next co-operative project to be undertaken is a standardization of product so that the county's butter can be sold under a special brand and at a special price. A field man will be employed to assist in improving quality. It is felt that the association can sell to better advantage than can single creameries and will be assured of better treatment than an individual receives. The association has been offered one-half cent per pound extra for its total output if all its product is pasteurized. On the 1920 production, this would amount to $16,988.57. It is expected that co-operative buying of supplies will make a good saving. If the plans now under way had been in operation in 1920 they would have made a saving which is estimated at $60,000 to $70,000—a "nice piece of change".

The Farmer's Voice

Will be heard on every aspect of agricultural thought and practice, at the Get-Together Conference, February 1—10, Madison, Wisconsin.

Current and impending farm problems will be boiled down to a program for 1921.

Fresh, vital, authoritative matter bearing directly on the problems that confronts the Wisconsin farmer will be heard. Let's go!

A. W. HOPKINS.

1921 Outlook in Central New York

HOARD'S DAIRYMAN:—The average Central New York farmer made more profit during the last three years than in the ten years that preceded them. Because of this prosperity, many western farmers have come to this section and purchased farms at prices that are locally considered to be far above the actual value of the property. Since many other farmers are considering moving to this section, a few observations of the 1921 outlook may not come amiss.

To begin with, the main income of the farmers in this section is derived from their dairy products. Milk is at present lower than usual, that is, it has declined more than the retail value of the prepared feeds, and must reduce the profit from milk, unless more efficient production methods can be utilized. The man coming from a distance is then dependent for much of his income on the dairy equipment of the farm he buys, and in justice to himself it is a good policy to secure actual facts and figures regarding past production and profits from this source.

The land here is not all the same, as it varies according to the treatment it has received. Why not make a personal examination? If you invest much money, this added investigation will repay you many times, for land suited to your purposes will naturally give far better results. This winter has been a very mild one, and it seems reasonable to expect that there will be very little winter-killing of new seeding.

There are some very good buys among Central New York farms, but, for your general satisfaction, make a thorough investigation. This is not propaganda for or against the real estate agencies through which most of the sales here are made, but is suggested as a practical aid by one who has lived here all his life. With prices going back to normal, it is easy to pay more than a farm is worth, especially if you buy without any investigation as to what it is considered worth locally.

If a man from your section has started in the farming business in this section, get his opinion if you can. Farming is a business anywhere, and it is doubly true in Central New York, and the successful farmers of the future here will be those who operate on business principles. One of the basic principles of successful business is to have a thorough knowledge of what you are buying. It is worth trying.

New York. S. C. MCGREGOR.

When you consider the unusual volume of rubber in Caterpillar tires and their patented side-vent construction, it is easy to see why they are so resilient.

And when you compare the cost of repairs and the length of life of a Caterpillar-equipped truck with that of a truck running on ordinary solid tires, it is easy to see the value of this resilience.

In dozens of big truck fleets where this comparison has been made, invariably the trucks that rolled on Caterpillars showed a decided saving in repair bills and a much longer life.

That is one reason why these fleets are being equipped with Caterpillars just as fast as the old tires wear out.

Indiana Calf Club Buys High Class Bull

The Argos Guernsey Calf Club of Argos, Indiana, has led the way among calf clubs of the state in the purchase of a high class Guernsey bull for the use of its members. King Masher 22nd was purchased from Harbor Hill Farms, New York. He is a son of King Masher whose twelve A. R. daughters have made wonderful records of production, one of them, Masher's Elsie, having made 855 pounds of butterfat and five others over 600 pounds of fat. His twelve daughters have eighteen records that average 597 pounds of fat.

The dam of the calf is Chelly Modenese II, now on test and producing at the rate of 345 pounds of butterfat in 197 days. She is a daughter of Imp. Masher's Galore and out of an A. R. cow, Chelly Modenese.

The securing of such a bull places this calf club in an enviable position among Guernsey calf clubs of Indiana and other states and enables the club members to go ahead with their club work in a fine way and with the assurance that they can breed better Guernseys than the calves with which they started.

Indiana. C. R. GEORGE.

Making bricks without straw wasn't any harder task for the children of Israel than it is for cows to make good milk without plenty of pure drinking water.

Talking about efficiency, a New Jersey authority says that whereas a century ago it was taking 75 per cent of our population to grow our food, today 25 per cent is doing it.

The LAUSON

Right near you is some good farmer who has owned a Lauson Junior engine for ten years or longer. Ask him how it compares with cheap farm engines.

Perhaps he first used it to run the feed grinder—and then the cream separator and churn—and later the washing machine or milker. In any case you will find it has carried the load year after year with unfailing satisfaction.

Literally thousands of Lauson owners would not have any other make. And their judgment is based on their own experience. Twenty-five years' time should be sufficient to satisfy anyone that the *best* farm engine is after all the *cheapest.*

May we send you a Lauson Farm Engine catalog? It tells the story in pictures.

The Lauson "Full Jewell" Tractor has won prizes for the best performance all the way from Walla Walla, Washington to Lincoln, England. It is just another evidence of quality construction.

Association Notes

Orleans Co-operative, Indiana:—Three pure-bred Jersey sires were purchased during December. Cottonseed meal, 43 per cent protein, has been offered to the association in carload lots at $38 per ton. Four per cent market milk sold for $4 per cwt.

Wood County No. 2, Wisconsin:—The average production of the cows in this association for November was 415 lbs. milk containing 16.44 lbs. fat, the average test being 3.96%. Freshening cows and increased grain rations are steadily building up the production of most herds. This is not proving as profitable as it might, due to low-priced milk. Two meetings of the association were held during December.

Knox County, Illinois:—One farmer has purchased a milking machine, seven others are successfully using mechanical milkers, and many others are planning on the installation of milkers soon. Six unprofitable cows were shipped to Chicago during December. Two pure-breds and some exceptionally good grades have been purchased by members of the association. The average cow for December produced 682 lbs. of milk containing 28.1 lbs. fat. Market milk testing 3.5% sold for $4 per cwt. and 5c per point above. The creamery paid 40c per pound for fat. Milk retails for 15c per quart, butter for 65c per pound. Feeds are priced as follows: corn and cob meal, $1 per cwt.; ground oats, $1.50; wheat bran, $2.25; cottonseed meal, $3; oil meal, $3.25; Cow Chow, $2.50; molasses, $2; clover hay, $20 per ton; alfalfa hay, $30; corn silage, $8.

Jo Daviess County No. 2, Illinois:—Members are becoming more interested in better rations. During December $3.50 was paid for 3.6 per cent market milk and 3c per point above this test. Local feed prices are: corn, 60c per bushel; oats, 48c; bran, $2 per cwt.; oil meal, $3.25; mixed hay, $1.25; molasses feed, $1.70; Cow Chow, $1.75.

First Kane County, Illinois:—During December eight new members have been added to the association and their herds tested. Eleven unprofitable cows have been disposed of. The seven herds in the association now given balanced rations show an increase of 13% over last month in fat production. December market milk testing 3.5% sold for $2.60 per cwt. and 4c per point above.

Kane County No. 2, Illinois:—Eight unprofitable cows and a grade bull were sold in December. Four pure-bred bull calves and a 15-month bull were bought from an association in Wisconsin. Four pure-bred Holstein cows and two heifers were bought at a local sale. Bran was ordered by marketing association in car lots. "Blue", the grade Holstein that leads the association this month, has made 6,700 lbs. milk containing 290 lbs. fat in three months. Mr. H. W. Lees, who has the high herd for December, says that he owes everything to cow testing. Four years ago, when he took up cow testing work, his herd averaged 5,000 to 6,000 lbs. milk. Through his care to get better cows and through better feeding, care, and handling, his herd of about 35 cows is now on the 10,000-lb. list. The C. E. Warford herd averaged 1,095 lbs. milk, 42.71 lbs. fat and the high cow made 92.8 lbs. fat this month. Milk testing 3.5% sold for $2.60 per cwt. and 4c per lb. above. Milk retails for 12c per qt., butter for 57c per lb., and cheese for 40c per lb. Feed prices are: alfalfa, $30—$34 per ton; mixed hay, $28; clover, $24—$28; corn, 60c per bushel; oats, 45c per bushel; barley 66—70c; bran, $32 per ton, (to marketing association, $29 per ton); cottonseed meal, $45—$47; oil meal, $65—$67.

Macoupin County, Illinois:—During November 25 herds were tested, five of which are "one hundred per cent" pure-bred. Twenty-four unprofitable cows were sold and several pure-breds purchased. The November price for 3.5% milk was $3.10 per cwt. and 5c per point above.

Effingham County, Illinois:—Three unprofitable cows were disposed of. Four pure-bred cows were purchased.

The St. Anthony Hospital herd increased its average fat production by 7 lbs. because a balanced ration was fed instead of a poor grain mixture. Two members held sales to disperse parts of their herds. One sold 17 purebred cows which averaged $325, while the other sold 16 grades which averaged $60. Does it pay to raise purebreds? Dairymen received $2.45 per cwt. for 3.5% milk in December, plus 4c per point above this test. The creamery paid 45c per lb. for fat. Local feed prices are: corn, 60c per bushel; oats, 55c; bran, $2 per cwt.; cottonseed meal, $2.25; oil meal, $3.50; Purina Cow Chow, $3.28; alfalfa, $30 per ton; clover, $25; silage, $6.

Du Page County, Illinois:—The high herd, Mr. Geo. B. Walker's purebred and grade Holsteins, averaged 1,287.8 lbs. milk containing 44.4 lbs. fat. These cows were milked three times a day. Three members did seven-day work during December, with very creditable results. The second six months of the association starts in January and all members are continuing the work. The price paid for 3.5% milk during December was $2.60 per cwt. and 4c per point above this test. Milk retails for 14c per quart and butter for 60c per pound. Feed prices are: Alfalfa, $30 per ton; stover, $5; bundle corn, $10; silage, $7; barley, $40; oats, $32; bran, $35; oil meal, $68; gluten, $58; corn, $30; cottonseed meal, $51.

Amherst—Nelsonville, Wisconsin:—Three cows were sold for beef and ten young registered Guernsey bulls were sold during December. Good results are being secured by feeding balanced rations. The creamery paid 69c per pound for fat, and the following prices were charged for feeds: Bran, $38 per ton; Unicorn, $62; oil meal, $62; hay, $25; corn, $32.

Ft. Atkinson, Wisconsin:—Improvement in the quality of silage and better care of cattle is gradually bringing the association upward in production. More and more cream is being received by the creameries. In December condensery milk sold for $2.388, plus 4c for each point above the required 3.5%. The creameries paid 62—66c per pound for fat. The following are local feed prices: Alfalfa, $28 per ton; clover, $24; timothy, $22; marsh hay, $20; silage, 6; corn, $28; barley, $36; oil meal, $50—$56; bran, $30—$36; oats, 60c per bushel.

Wilton, Wisconsin:—A Guernsey cooperative bull association has been organized. The basket ball team of this association, called the "Pure-breds", will have a game January 8th, playing a Wilton city team. The creamery paid 72c per pound for fat and feeds were charged as follows: Oats, 45c per bushel; barley, 80c per bushel; pure wheat bran, $32 per ton; oil meal, $50—$54; Schumacher Feed, $42.

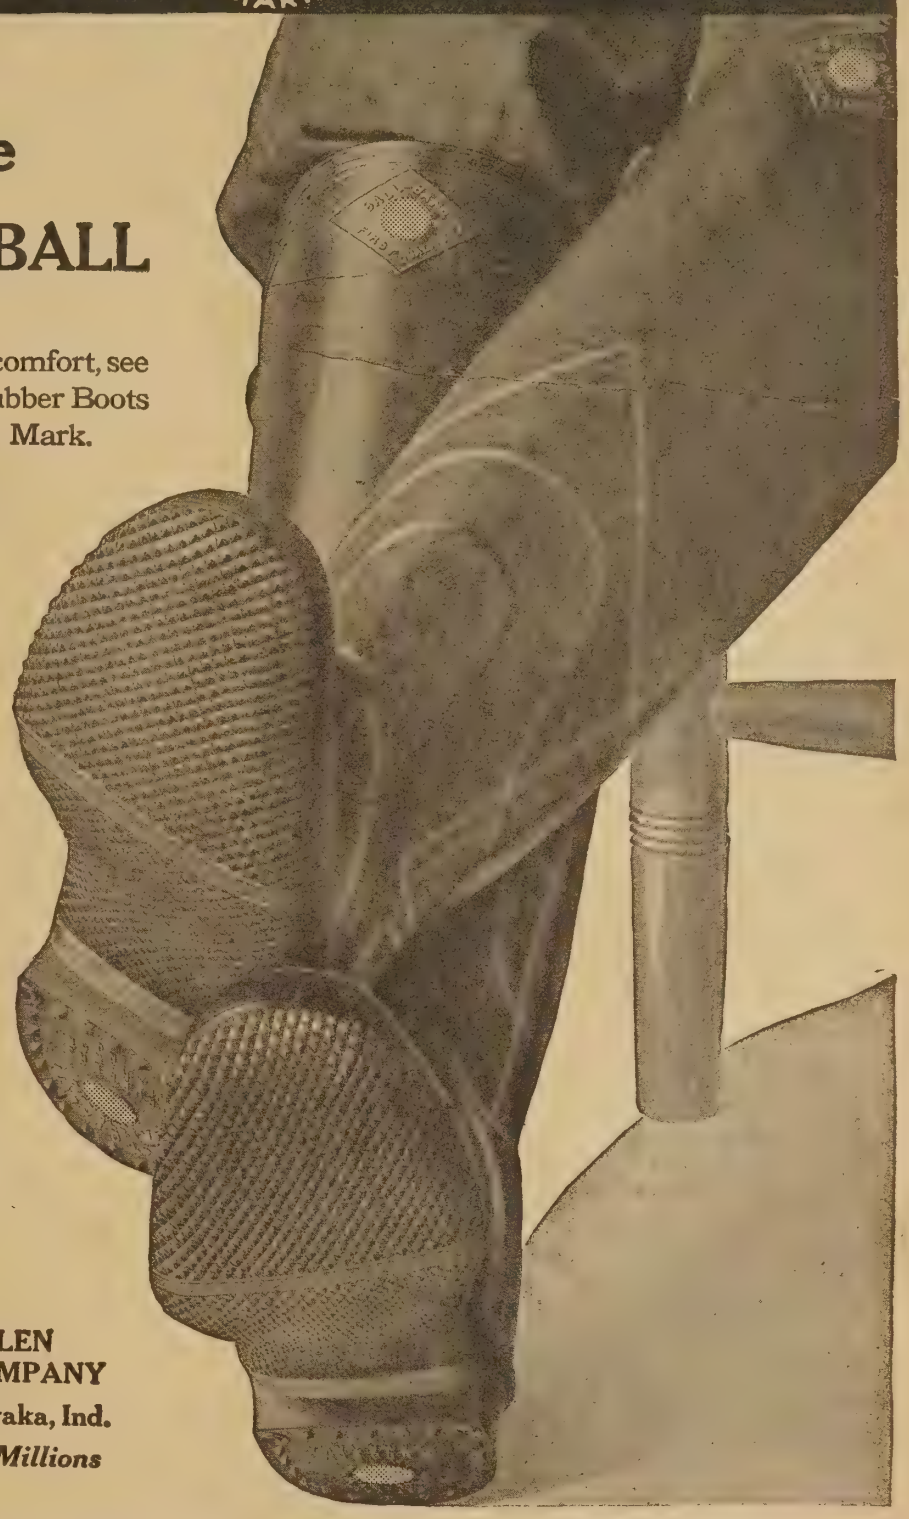
Rock Prairie, Wisconsin:—Two cows were sold to the butcher in December. One car of bran was purchased. December market milk sold for $2.60 per cwt. and 4c per point above 3.5%. Milk retails for 14c per quart; butter for 62c per pound; and cheese for 35c per pound. Feed prices are: Barley, $1.50 per cwt.; corn, $18 per ton; bran, $35; oil meal, $60.

Racine and Kenosha, Wisconsin:—One milking machine was installed during the month of December. Five unprofitable cows were sold to the butcher. Two members ran cows on seven-day test. Milk testing 3.5% sold for $3.25 per cwt. Bran sold for $34 per ton; ground oats, $37; corn, $36; ground barley, $39; oil meal, $60; cottonseed meal, $58; gluten feed, $50; clover hay, $25; alfalfa, $28; corn stover, $13; silage, $7.

Ellington, Wisconsin:—The condensery paid $2.40 per 100 lbs. of 4% milk. The creamery paid 56—61c per pound for fat and the cheese factory 60c per pound in December. Feed prices are: Clover hay, $18 per ton; alfalfa hay, $28; silage, $6; bran, $36; middlings, $36; oil meal, $60; gluten, $55; oats, 46c per bushel; corn, 70—80c per bushel; barley, 85c per bushel.

Whitewater, Wisconsin:—All members are now feeding balanced rations made up largely of home grown grains, buying only high protein feeds. December market milk testing 3.5% sold for $2.60 per cwt. The condensery paid 65c per pound for fat and the creamery paid the same price. Milk retails for 13c per quart and butter for 60c per pound. Feed prices are: Bran, $35 per ton; ground oats, $34; corn, $22; oil meal, $58; cottonseed meal, $49; alfalfa hay, $28.

West Bend, Wisconsin:—Two cows were sold to the butcher during December. Feed prices are: Barley, 90c per bushel; oats, 50c; corn, 80c; oil meal, $62 per ton; middlings, $35; bran, $35; wheat feed, $40; Pillsbury Dairy Ration, $45; silage, $7; hay, $25 to $30.



Canaan, Connecticut:—Five boarder cows were disposed of during December. Three per cent market milk sold for $3.34 per cwt. and 4c per point above this test. Feed prices are: Silage, $8 per ton; hay, $30; bran, $44; gluten, $61; cottonseed meal, $45; oil meal, $61.

Porter County, Indiana:—Milk production in December was well up to normal but the profit per herd was not so large, due to the drop in milk prices. At the present prices of feeds, however, the dairyman still finds that the most profitable market for roughages and feeds raised on the farm is through the dairy cow. Four grade cows and one pure-bred were bought, and twelve grades and one pure-bred were sold. Twelve boarder cows were disposed of. Price received for milk was $2.60 per cwt. Feed prices are: ground corn, $22 per ton; bran, $35; corn and cob meal, $18; ground oats, $25; cottonseed meal, $45; oil meal, $50; alfalfa hay, $25; clover hay, $20; corn silage, $5; gluten, $45.

Weiser—Payette Co-operative, Idaho:—All bulls in this association are pure-bred. The Glendale Herd sold well at Payette, December 8th, and most of the animals remained in Pay-

"BALL BAND" TRADE Red Ball MARK

Look for the RED BALL

If you want real foot comfort, see that your next pair of Rubber Boots has the Red Ball Trade Mark.

This round red ball is on the knee and heel of every "Ball-Band" Boot, on the sole or arch of every Arctic and Light-Weight Rubber. It stands for satisfying fit, highest quality, longest wear.

Ten million people look for the Red Ball when they buy. Sixty thousand dealers sell "Ball-Band."

Ask your dealer for free illustrated booklet, "More Days Wear." It will show you many of our different styles of Rubber and Woolen Footwear.

MISHAWAKA WOOLEN MANUFACTURING COMPANY
313 Water Street, Mishawaka, Ind.
"The House That Pays Millions for Quality"

GOOD SEEDS

Grown From Select Stock—None Better—50 years selling seeds. Prices below all others. Buy and test. If not O. K. return and I will refund. Extra packets sent free in all orders I fill. Send address for Big Catalogue illustrated with over 700 pictures of vegetables and flowers of every variety

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Coming Events

Feb. 1-4—Manitoba Dairy Association will meet at Fort Garry Hotel, Winnipeg. Secretary, L. A. Gibson, Winnipeg.

Feb. 1-10—Mid-Winter Farmers' Course, Madison.

Feb. 1-10—Wisconsin Live Stock Breeders' Association, Madison. Geo. W. Davis, Secretary, Madison.

Feb. 4 & 5—State Live Stock Judging Tournament (roundup), Madison.

Feb. 7-12—Sixth National Tractor Show to be given in Columbus, Ohio.

Feb. 15-17. Michigan Allied Dairy Association, Grand Rapids. Secretary, H. D. Wendt, Lansing.

Feb. 16—18, 1921—Virginia Dairy Show and Annual Convention of the State Dairymen's Association held in Roanoke. Secretary, Frank A. Buchanan, Blacksburg, Va.

Forestry increases the farm income by growing timber on poor soils, steep slopes, rocky lands, and unused corners, thus making waste lands yield a profit.

Do Winning Jersey Juniors Fail to Come Back

"OF seventy-four first prize winning heifers or calves in the past thirteen National Dairy Shows, only seventeen are in the Register of Merit. . . . There is not an instance upon record of a heifer winning the junior championship at the National one year and coming back later as a mature cow and winning the grand championship."

In these two statements Wallace Macmonnies in the Jersey Bulletin questions the show ring standards by which winners have been selected in the Jersey heifer classes at the National Dairy Show. He asks, "Were the judges choosing for their prize heifers the useful, developing kind or the pretty, plump, early ripeners, which went no farther?"

In his investigation of first prize winning calves, yearlings, and two- and three-year-olds to discover an answer to his question, "Did they come back as mature cows and, in the show yard or at the pail, justify their youthful laurels?", Mr. Macmonnies studied the life records of blue ribbon animals at the National Dairy Show since its beginning in 1906. He does not discuss the relation between the approved type among aged cows and their productive capacity as indicated in Register of Merit records but only shows that junior champions neither develop into the material of which grand champions are made nor produce heavily at maturity.

Seventeen of these 74 first prize winners have Register of Merit records, the highest fat production being 651 lbs. All the records completed average 444 lbs. fat, which Mr. Macmonnies remarks is "nothing to boast of when there are whole cow testing associations of Jerseys with records approaching this in which many of the cattle are grades."

Not only have junior champions failed to wear the purple ribbons in their later years at National Dairy Shows but only two have such honors from state fairs at later dates. With two exceptions, no first prize winning calf or heifer at the National has ever won a like honor at a succeeding show. There are a few seconds, thirds, fourths, and fifths, but only two firsts. The animal which came nearest to repeating was Majesty's Crocus, a first prize junior yearling in 1911 and second prize aged cow in 1920. Fauvic's Nic Nac, a National first prize two-year-old in 1919, has made 500 lbs. of fat as a two-year-old and was a state fair and Eastern States Exposition Grand Champion in 1920.

Mr. Macmonnies lays the blame for the failure of Jersey junior champions to come back to the tendency among judges to give too great emphasis to bloom and fleshing in young animals. He says of the champions selected, "These fat little heifers, like the fat little bulls which win so frequently as yearlings and two-year-olds, are seldom heard from later. And as far as the fat little udders so frequently seen and seemingly demanded on our unbred heifer calves, I have yet to see the first one that developed into a great working vessel in later years."

The list of winners in the young classes from the first National Dairy Show is reviewed in this article. Some are unheard of after winning, some sold one or more times on the basis of their ribbons, a few won later at smaller shows and a few made fair records, but the great majority failed to "come back". The writer says of this, "Whether this is due to the fact that they were not exhibited or fell into hands in which they were not developed may or may not be the case, but in those instances in which they remained the property of the same breeders and were again exhibited, very few of them scored."

National Grange Notes

WASHINGTON, January 15—The Wadsworth-Kahn bill to create a Government corporation to operate the nitrate plant at Muscle Shoals, Ala., is unfinished business in the Senate as this is written.

The National Grange has gone on record at its last two annual sessions in favor of the continued operation of the nitrate plant at Muscle Shoals, Ala. The resolution adopted at the session of 1920 at Boston specifically states it is "for the production of nitrates for fertilizer or such other fertilizer manufacture as may be economically possible." This is provided for in the Kahn-Wadsworth bill. The plant exists at Muscle Shoals with a steam power equipment sufficient to operate it and with nitrates on hand which can be sold for enough to provide the $12,500,000 working capital which is required, without a dollar appropriation from the U. S. Treasury. The Kahn-Wadsworth bill when passed authorizes this to be done and this is the bill which the Grange asks Congress to pass. Every farmers' organization in the United States that is on record favors this same proposition.

⚜

No progress has been made in the last two weeks towards getting the Capper—Volstead collective marketing bill through conference. Members of the Conference Committee which is made up of Senators Nelson, Dillingham, and Overman and Representatives Volstead, Graham, and Sumner have not held a meeting, under an informal understanding that they would await conferences of the representatives of interested farmers' organizations before taking action. These conferences have been in progress and have reached the conclusion that the Senate amendment, aided by the Judiciary Committee of the Senate, has so modified the original purpose of the bill that it is not acceptable to any of the farmers' co-operative organizations unless this amendment is entirely eliminated by the conferees. This amendment states: "Nothing herein contained shall be deemed to authorize the creation of, or attempt to create, a monopoly, or to exempt any association organized hereunder from any proceedings instituted under the act entitled 'an act to supplement existing laws against unlawful restraints and monopolies, and for other purposes,' approved October 15, 1914, on account of unfair methods of competition in commerce."

The Conference Committee is to be urged to ask the Senate to recede on this amendment. The House amendment substituting the Federal Trade Commission for the Secretary of Agriculture as the supervisory power is also objectionable, and the conferees will be urged to ask the House to recede as to this amendment.

⚜

The Brauer plan for a billion dollar loan to Germany to be used for the purchase of American raw materials, has been under much discussion in agricultural and congressional circles. Members of the National Grange will remember Mr. W. W. Brauer, responsible for this plan, as having been in attendance at one session of the National Grange, to further his co-operative marketing plan, which is widely known. The German loan scheme is now before the United States Senate, having been brought to public attention by letters written by Mr. Brauer to various senators and members of committee. A Senate investigation is promised. Mr. Brauer states that he is authorized on behalf of the German government to place immediate orders for several hundred million dollars worth of American products if the loan can be arranged.

⚜

The War Finance Corporation bill was vetoed by President Wilson and promptly passed over the veto by both Houses of Congress. Secretary of the Treasury Houston acquiesced in the action of Congress and announced the day after the veto was overruled by the House that the War Finance Corporation was ready to do business. There has been no substantial advance in the price of farm products since that time.

Oregon Dairy Notes

HOARD'S DAIRYMAN:—Three neighboring counties in Oregon, Columbia County, Washington County, and Multnomah County, held simultaneous meetings during the week of January 10th. These meetings were directed by the county agents and Professor T. B. Fitts, dairy specialist of the Oregon Agricultural College. The program at Gresham consisted of many talks of a very comprehensive and instructive nature. Monday several speeches, which soil and rodent enemies would do well to heed, were given by Professor C. B. Ruzek, Professor of Soils, and I. N. Gabrielson, Federal Rodent Control Specialist. On Tuesday, farm crops day, appropriate talks relative to the increase of crop yields were given. Wednesday being poultry day, many interesting addresses were delivered concerning our feathered friends. Dairy day, Thursday, was the initiative for a number of inspiring addresses in regard to the dairy industry. The speakers were Professor E. B. Fitts, Edith Knight Hill, Sec. Oregon Dairy Council; M. S. Shrock, Oregon Dairymen's League; Julius Luscher, champion calf feeder, and R. V. Gunn, farm management specialist.

About 150 to 200 were in attendance at each of these sessions. The week was brought to a close by a banquet at which the speakers were K. A. Miller, Mayor of Gresham, and George A. Mansfield, President State Farm Bureau.

Oregon. E. K. HILL.

Treatment After Dehorning

HOARD'S DAIRYMAN:—I notice in a recent issue J. N. Q. asks where he can get medicated pads for the heads of cattle after dehorning them, to stop the bleeding and keep out the cold air. You advise pine tar and oakum held in place with a bandage. A piece of absorbent cotton will stop the bleeding immediately, is easy to apply and needs no bandage.

Merrimack, Wis. J. R. F.

Certified Milk Producers Meet

The production of certified milk is decidedly an important industry. At the annual meeting of the American Association at New York City in January a considerable number of members were present. These seemed to be largely from the eastern and middle states.

Dr. Ager of Brooklyn, a member of the Milk Commission, suggested methods of increasing the use and sale of certified. Few people know what certified milk is. This applies to the medical profession, urged Dr. Ager. All this was endorsed by Dr. Moak. Both of these men were engaged in the work of supervision sixteen years ago and from then on to the present.

Loton Horton of Sheffield Farms treated the members to a moving picture exhibition which he has prepared at an expense of some $8,000, and which he expects to loan out and to get into the city theaters. It shows certified milk from pasture to the mass of undernourished babies in the big city. It is really an attractive exhibit, and his company is financing its use to show the benefits of good milk.

F. W. Howe of Boston asserted that by nature milk was never intended to be pasteurized. All prefer raw milk as to taste, and there is almost no danger from raw milk if it is properly safeguarded. Preventive measures are always to be preferred to curative. In many cases water is treated to prevent spread of disease, but such water is not so palatable. The same principle applies to milk.

The publisher of the Wall Street Journal, C. W. Barron of Boston, gave a somewhat extended address on farm accounting. He insisted that the production of milk has never paid a profit and this is fully as true of certified milk as of any. Only by unpaid family labor has any profit been made. The government states that the dairy farmer gets less than a dollar a day for his labor, and the hours are long. When Mr. Hoover announced that he would cause an investigation to determine the cost of producing milk and then force a price on cost basis, Mr. Barron telegraphed him to get about it as quickly as possible and see what it does cost to produce milk. It was never done for the price would have had to be advanced, not reduced.

Mr. Barron from his own experience in producing certified milk has come to the conclusion that he must raise largely his own feeds and his own cows, and that these should be of pure breeding in order to get an income from stock. To keep up a herd of one hundred cows requires keeping 240 animals. Some cows are dry, but there must be many non-producers because of their under age. He added that certified milk should go no lower, and that all forces will finally remain above the pre-war level.

Professor Rettger of Yale spoke of the value of milk. The consumption is too low, it being but .6 of a pint. It's chemical composition is right, but we have a more important basis, largely that of the vitamines. One of these designated as "C" is easily destroyed by heat, and orange juice needs to be added to pasteurized milk. "B" is not thus destroyed. Then, proteins differ greatly, there being some eighteen varieties. Lysin is an essential, and milk contains the best forms of protein. Cereals, unless used with milk and cream, do not constitute sufficient sustenance for children.

In the experiments at the station in Connecticut, chicks with milk almost doubled the weight of those not having milk. Mortality in the flock was greatly reduced by the use of milk. Sometimes the milk sugar tends to produce bacteria which hold in check injurious organisms. We should use a quart or more per capita of milk rather than the small amount now consumed.

Dr. Shaw of Albany talked about the physicians' part with milk. He has used buttermilk and soured milk with children with good effects. Then he went on to speak of various races, their longevity, initiatives, and force. He added that milk has made this race. He spoke further, however, of the relatively small amount of milk consumed and urged that more must be used. If we have another war in twenty years there will be a failure of young men who can pass inspection unless more milk is used now in the diet of children. Then he asserted that cheap milk is really expensive milk.

Dr. Park of New York called up the sour milk matter with children. He has found that there is a difference in the bacteria of sour milk. Some are good and others are bad. Sour milk did not seem to be generally favored. A person who has had typhoid should not be employed in handling certified milk, for there is a possibility of his being a carrier.

The national society took an advance step in preparing for a paid secretary a little later on and for a fund to be used in promoting the use of certified milk. There was a feeling shown all through the two days that the use of certified is not encouraged to the extent that it should be.

It is planned to hold the next annual meeting in Chicago in connection with the cattle show and with the national meeting of milk commissions of the country. Resolutions from both societies have tended to bring them together. W. H. Lee of Orange, Conn., was re-elected president and H. B. Winters of Albany, secretary-treasurer. There was very general agreement that the meeting was a decided success. Like most of our state meetings this one has the encouragement and assistance from the state agricultural department.

New York. H. H. LYON.

Do You Want More Profit from Your Herd?

You can get more milk out of every cow you own—if—you'll put her in shape to give more.

Modern dairymen acknowledge that health and cleanliness—comfort always and water when she wants it—are the things that add extra quarts to milk production from any cow.

This is an old story to dairymen using Star Equipment, but it means more profit to the man whose barn is not as good as his herd.

1 Star Alignment Device
Instantly lines cow at gutter after she is in stall—keeps stall, bedding and cow clean.

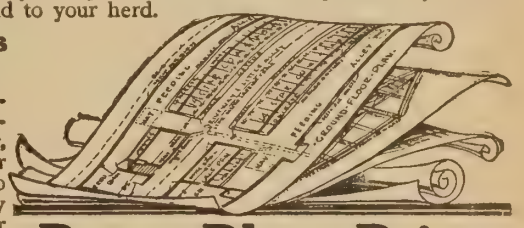
2 Star Stanchion Adjustment
Narrows or widens stanchions to exactly fit cow's neck. Safety and comfort.

3—Star Curb Clamp
"Sets a stall in 60 seconds"—permits of concrete work being finished before stalls are set. Cuts time of installation in half.

4—Star Unit System Stall
Each stall assembled before shipment, ready to go in place the moment it arrives.

5—Star Wood Lining
Hard maple lining forced in U bar, anchored so it won't come out.

"STAR EQUIP" Your Barn



Easy to Install

When your barn is "Star Equipped" you can say so with pride, for money won't buy and factories can't build better stalls, stanchions, Litter and Feed Carriers than those that carry the STAR trademark.

Exclusive features, work savers and money makers, protected by U. S. patents, put Star Equipment in a class by itself. For instance, the STAR Unit System Stall enables you to put in as few or as many stalls as you need and add more as you add to your herd.

Star Equipment Makes Your Barn Modern

The Star Line is not confined to Steel Stalls, Stanchions, Water Bowls, Pens, Ventilating Systems, Litter and Feed Carriers, but also embodies Harvester Hay Tools, Cannon Ball Door Hangers, Hoghouse Equipment, Garage Door Fixtures, and all kinds of farm specialties. It takes a 320-page catalog to tell the Star story.

Send for Big Catalog of Star Barn Equipment

Your name will bring the finest catalog ever issued—a 320-page bound book worth owning for the useful information it contains. The only expense to you is the trouble it takes to write.

Barn Blue Prints Worth $10.00 FREE!

Made Especially for Your Needs

Just specify on the coupon below the number of cows, young stock and horses you want to house and the experts in our Plan Department will send you a practical set of blue prints (elevation, floor plan and outside) of a barn especially suited to your requirements. And it doesn't cost you a cent. This is our "get acquainted" offer. Mail this coupon. We'll mail the plans free.

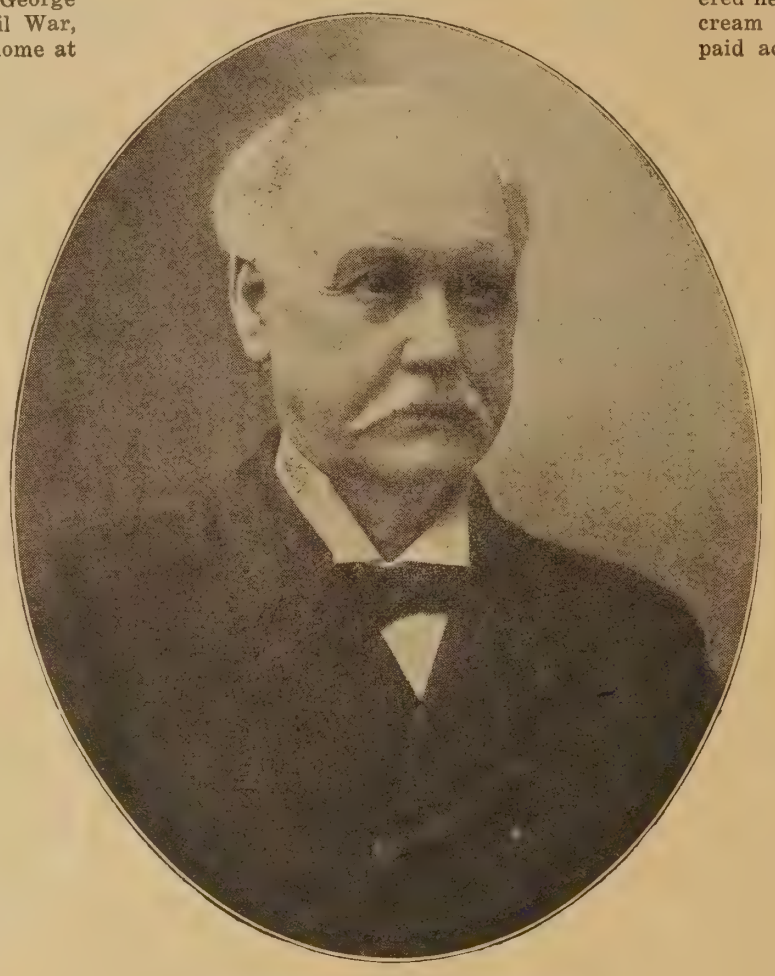
$1,840 From Five Cows

A Maryland reader of Hoard's Dairyman reports unusual success with a herd of five cows. This herd, containing so small a number of cows, made a return last year of $1,840, or $368 per cow. The milk sold for $1,707, the other $133 coming from the sale of calves at veal prices. This is a small herd of cows, but the profits made from it greatly exceed those secured on many other farms from herds twice as large. There is more profit in one good cow than in a herd of poor ones. Mr. Kennedy G. Rogers, who owns this herd, has proved himself a successful caretaker of dairy animals.

EDITORIAL COMMENT



On Sunday evening, January 16th, Gen. George Washington Burchard, veteran of the Civil War, editor, and statesman, passed away in his home at Fort Atkinson, Wis. He was born in Oneida County, New York, December 26, 1835. When he was one year old his parents moved to Chautauqua County, New York, remaining there till 1850, when they moved to Waukesha, Wisconsin. He was graduated from Carroll College, Waukesha, Wis., in 1857 and after studying law at Poughkeepsie, New York, for one year was admitted to the bar. He practiced law until August, 1862, when he volunteered his service to his country. He entered the army as a private, but rose to the rank of colonel. His last assignment was as Provost Marshal General of the Department of Arkansas.

He returned to Wisconsin in September, 1866, and resumed the practice of law and in 1867 settled in Fort Atkinson, where he has since made his home. He did not confine himself to the practice of law for many years as his tastes and qualifications led him into public service and other fields of endeavor. It is not our purpose to discuss the good work he rendered to his state and nation through the several positions which he held, but rather to give something regarding his contribution to the development of the dairy industry.

He was farm minded. He liked the soil, its live stock, and not many years after he moved to Fort Atkinson he bought a farm and there he lived with his family till 1894. He had long been a personal friend of W. D. Hoard, former governor of Wisconsin and founder of Hoard's Dairyman, and being a keen student of dairy farming led Mr. Hoard to select him as his associate editor, a position he held for 20 years. Former Governor Hoard appointed Mr. Burchard Adjutant General of Wisconsin. In 1896-7 he was president of the Wisconsin Dairymen's Association and secretary of that organization from 1898 to 1907.

In all the positions which were committed to his trust he discharged his duties faithfully and well, but his work for the advancement of the dairy industry gave him the greatest satisfaction. He never tired of laying plans that would assist the dairy farmer in his efforts, for the dairy farmer's success was almost a personal achievement to him. Before the Babcock test was discovered he endeavored to perfect a system of testing cream that each patron of a creamery could be paid according to the quantity of fat delivered.

GEORGE W. BURCHARD

He worked out a system of measuring the fat in a given quantity of cream and it was generally used by creameries making butter from gathered cream. His measure was used in connection with the Curtis Churn test.

General Burchard became early associated with the activities of the Wisconsin Dairymen's Association. He was secretary of that organization when it established its first cow testing association and guided the development of this new work. He lived to see Wisconsin with 115 cow testing associations and leading all other states in the Union. This is a most constructive piece of work, but created little or no feverish enthusiasm. These associations do their work quietly though effectively and they characterize his temperament and conception of service. He did not believe in extravagant display or glittering statements of generalities, but he did believe in the renovating power of sound knowledge.

As associate editor of Hoard's Dairyman he had opportunity of rendering a large service to the dairy farmers of this country. He was not a prolific writer, but what he wrote was in clear, masterful English and went straight to the heart of his subject. In his editorial work he excelled as a critic. He knew what constituted evi dence. This made him a reliable and a capable counselor; it led professors of dairy husbandry to consult him regarding their investigations; and it assisted him in separating the wheat from the chaff. He was eminently fair and had no other concern but to determine the evidence of the material before him. He once wrote: "Every right implies a corresponding obligation; every privilege a corresponding duty."

Those who lived and labored with him loved him most, for they knew his motives, understood his purpose; and knew that he was genuine.

EMERGENCY TARIFF BILL

There are various opinions regarding the chances of the Emergency Tariff Bill passing the Senate. We have been informed upon what we consider reliable and well informed authority that the Senate will not pass this measure and, if it did, that the President would not approve it. On the other hand, we are informed by several representatives of dairy organizations that the Senate will pass the Emergency Tariff Bill and that the President is likely to approve it. We still believe, however, that the Emergency Tariff Bill has little chance of becoming a law.

Since we have been informed regarding the status of this bill, we have considered it largely as a little soothing syrup for the farmers, something to quiet them and make them behave while the other fellow gets what he desires. We dislike pretention, camouflage, for nothing is accomplished by such moves, except to lessen the public confidence in its representatives. This pretense to help the farmer creates considerable labor and expense, for a number of officials of dairy organizations were called to Washington and appeared before the Finance Committee and presented to it the rightful claims of the dairy farmers. Through their efforts the Emergency Tariff Bill has been amended. The measure now provides for a tax of eight cents a pound on butter and cheese, two cents on condensed milk, and five cents on milk sugar. Attempt is being made to have the bill provide a tariff of five cents on powdered milk.

No agricultural tariff bill is complete or fair that ignores dairy products, for every argument used for requiring a tariff on other commodities can, with equal force, be applied to dairy products.

SOUND AND WHOLESOME

The banker, the farmer, the laboring man, the professional man, the business man, each has his remedies for bringing the people back to sane ways of living and thinking. The different ideas which these men present for correcting our evils, for establishing proper relationships between all classes of industries and peoples and to create prosperity makes interesting and valuable reading. We need to do more thinking about the important things of life if we expect to get the most out of it or to build a great nation.

An article by Mr. Erie C. Hopwood, entitled, "Which Road?", published in the World's Work, sets forth some ideas which we may all consider, and we quote a paragraph from it:

"America needs more than anything else a new conception—or the revival of the old conception—of the sound and wholesome things of life. America needs reconsecration to the family fireside—more of the crackling backlog and less of the three-room flat with electric radio heater and "in-a-door" beds. America needs new yardsticks to measure worth; more sober progress and less paprika; more contemplation and less cylinders under the hood; more bread and milk and less mushrooms under glass; more of Mother Nature's pink on the cheeks and less out of a box; more sweetness and simplicity and dignity and loving kindness and less of the haunting, hectic race against time and money—a race which, run to the goal, brings neither profit nor peace."

As dairy farmers we can well consider the principles and practices which constitute good farming. We can lay more emphasis on the skill required to produce a great cow than the price paid for her. The largest success in farming does not lie merely in the accumulation of money, but in keeping the soil fertile, the breeding of high producing animals, the establishment of attractive and well constructed farm buildings, and, above all, ideal homes. The herds, the flocks, and the crops must be created upon the right basis with the view of contributing to a better farm life or the efforts of the farmer fail. It is not money, power, or distinction that builds great nations and makes people happy, but it is the doing of the right thing in the right way and at the right time. We must have a true conception of the things that are worth while and of justice and square dealing before we can expect a proper readjustment.

Testing Buttermilk—Pasteurizing Cream

What is the right average per cent of fat for skimmilk and buttermilk? I have two kinds of bottles, one of them with double neck and 25 divisions and the other one with big body and short single neck with 20-10 per cent divisions. Are both

bottles the same, or is one of them better than the other? For testing skimmilk and buttermilk, is the same amount of sulphuric acid to be used as for testing whole milk?

I pasteurize my cream to 85 centigrade degrees and then I keep it for 48 hours at ten degrees without using any starter. What do you think about that?

Lima, Peru. H. M.

Reply to an inquiry concerning the testing of buttermilk appeared in our issue for December 24th. It will be noted that it is the double necked bottle which is preferred.

The same amount of acid, 20 cubic centimeters, is used in testing both skimmilk and buttermilk and the same method of testing is followed except that greater care must be exercised in securing the sample of buttermilk. In testing whole milk only 17.6 c.c. of acid are used. Professor Hunziker, in his book on "The Butter Industry", gives the following rules for making a test of skimmilk and buttermilk:

"Measure the properly mixed skimmilk into the test bottles with the 17.6 c.c. pipette used for milk testing. Add 20 c.c. of sulphuric acid. For best results add the acid in several installments and shake until all the lumps of curd have completely disappeared. Whirl in tester for 10 minutes.

"Special attention should be given when the bottles are placed into the tester. Test bottles in which the lower end of the funnelneck extends perpendicularly along the side of the bulb to the bottom of the bottle should be so placed that the funnelneck faces the center of the tester, otherwise the fat rises into the funnelneck. Test bottles in which the lower end of the funnelneck extends diagonally to the bottom of the bottle should be so placed that the graduated neck faces the center of the tester. This will prevent excessive breakage of this type of bottles. The tester should run perfectly smooth in order to prevent excessive breakage, as these bottles are of very delicate construction.

"Add distilled water or rain water at a temperature of 140°F. or over to the bottom of the neck of the bottle; whirl 5 minutes. Add hot water to near top of neck; whirl 10 minutes and read."

With proper operation of the cream separator, there should not ordinarily be a loss of more than 5-100 of 1%, and more often it should not leave more than 1-100 of 1% fat in the skimmilk. Where buttermilk does not show over 2-10 of 1% fat, it is considered that good work has been done in the creamery. If the loss is much greater than this, attention should be given to the buttermaking operation in order to correct it.

We see no objection to the pasteurization of the cream in the manner mentioned if this is done by the flash process. If the milk is held at 85 degrees Centigrade for the usual twenty to thirty minutes under the holding process it is likely to give a cooled flavor to the cream which would be undesirable. Where cream is heated to 85 degrees Centigrade, care must be exercised that proper apparatus is available so that the cream is all heated to this point and none of it is allowed to stay in contact for a sufficient length of time to give a scorched flavor to the product.

Beets vs. Mangels

I want any information you can give me concerning the value of the sugar beet for cow feed as compared with the mangels. I raised an acre of mangels this year, producing about 18 tons. It has been suggested that the sugar beet would give me better results, the same acreage producing more milk.

Kempton, Ind. J. A. K.

The sugar beet is a good bit richer in nutrient content than the mangel. In one hundred pounds of beets there are about 16.4 lbs. of dry matter, while in mangels there are about 9.4 lbs. In total digestible nutrients, one hundred pounds of beets contains 14 lbs. while the total in one hundred pounds of mangels is 7.4 lbs. The chief difference in the nutrient value of these two feeds is in the high carbohydrate content of the sugar beet.

In actual feeding practice, our observation has been that the results secured from these two feeds are not in proportion to their content of dry matter, mangels apparently giving about as good results as beets. Perhaps this is because these feeds have a great value in their succulence, in which the two are equal, as well as in their content of nutrients.

On the basis of feeding value alone, the beets are undoubtedly better, but the yield per acre of mangels is so much greater than that of beets that under usual conditions the mangels are a more profitable crop for dairy feeding.

Hitching Horses to Plow

Please tell me how I can hitch three horses to a two-horse plow and not create a side draft.

McLean, Va. B. H. W.

Wayne Dinsmore, secretary of the Horse Association of America, replies to the above inquiry as follows:

The only way three horses can be attached to a two-horse plow without creating side draft is to hitch them as a spiked team—two horses behind and one in front—arranging the equalizers so that the one horse in front will pull just as much as each of the two horses behind. He will walk on the solid ground next to the furrow.

Silage and Abortion

Will you please let me know if silage will cause cows to lose their calves, or injure the breeding power of a sire?

St. Charles, Minn. W. H. M.

Silage will not cause cows to lose their calves, nor will it necessarily injure the breeding powers of the herd sire. There are many live stock men who hesitate to feed silage to the bull for fear that it may cause him to become fat and logy. However, most dairy farmers feed their bulls a limited quantity of silage, particularly if they are supplying him a good legume hay and some high protein feeds. We would recommend that the herd sire receive not to exceed fifteen or twenty pounds of silage per day, together with the amount of alfalfa or clover hay he can consume and a sufficient amount of the regular herd ration to keep him in good breeding condition.

There are always cropping up, here and there, these various arguments against the liberal use of silage, not only that it may cause abortion but also that it is the occasion for nearly all the ailments of cattle. The best answer to these statements is that good dairy farmers everywhere are feeding silage to their cattle and they are well satisfied with the results.

Condensed Milk for Babies

We have an inquiry asking for the comparative values of raw and condensed milk for infant feeding. Can you give us this information or tell us where we can get it?

New York, N. Y. C. J.

Fresh cow's milk from a healthy herd is considered the best substitute for mother's milk in feeding babies. We believe that all physicians and child specialists agree to this general statement. There are occasions, possibly, when it may be desired to make use of some other form of milk or prepared foods, but general reliance should be placed upon fresh milk. If milk can be procured from a certified dairy that is known to be free from disease, it will probably prove most satisfactory, although with the ordinary city supply we would not advocate the use of anything but pasteurized milk.

Condensed milk has been used for the feeding of babies under certain conditions, but it is not considered wise to use it over an extended period. The condensed milk carries a very high percentage of sugar which tends to the production of fat rather than muscle. It is not wise to continue its feeding as babies are liable to become fat but do not gain in strength and vigor. Where it is used at all, the general recommendation is that it be replaced with milk after a short time. Evaporated milk may be used and it is especially desirable when there is no good milk supply available or in emergencies such as travelling.

Further information as to this, together with a more complete discussion of the several substitutes for mother's milk, can be secured by writing the Children's Bureau, U. S. Department of Labor, Washington, D. C.; ask in particular for the pamphlet entitled "Milk Indispensable for Children". This pamphlet contains a general discussion of the use of milk in its various forms, including fresh milk, condensed milk, powdered milk, etc.

Identifying Grass

I am sending you two seed heads of a grass growing here. Please give me the name of it and explain the nature of the plant together with its feeding value as compared with some of the other or more well known hay grasses such as timothy and the various clovers.

Phillipsburg, N. J. M. E. S.

The grass received for identification is common Redtop (Agrostis alba). This grass ranks next to Kentucky blue grass in its importance in the northern section of the country for natural pasture conditions. Redtop is of special merit on moist or wet soils and will often be seen growing vigorously in shallow ponds which later on become dry. It shows no marked preference for any particular soil, but it does its best on moist loams and clays, in fact it is perhaps the best grass for hard clay soils. It will do very well on soils that are too acid or sour to maintain a good turf of Kentucky blue grass.

Redtop is a very hardy perennial and it is seldom known to winterkill. It will form a good turf for pasture purposes and when seeded with alsike clover, the two make an ideal mixture for low, moist soils. Although not strictly a hay grass like timothy, it will give fair yields of hay when growing under ideal conditions. For this purpose, however, it is better seeded with other grasses and clovers.

Its feeding value as a hay is about like timothy and horses are quite fond of it. Its use in rotations, however, is limited to those soil conditions which will not support timothy, blue grass, and the clovers.

Fertilizing Land for Corn and Potatoes

I have a piece of land which has been pastured the past two years and covered with stable manure each year; previous to this it was mowed for hay for one year. I had alfalfa mixed with timothy on it but the alfalfa was an uneven stand. Next year I wish to plant corn on this field. I got about one-half of it plowed last fall. I would like to know whether it would be a good thing to use acid phosphate next year when I plant the corn or would a mixed fertilizer be better? I would get an attachment to my corn drill and apply the fertilizer in that way. Would this fertilizer help to keep away the worms? This piece of land is slightly rolling.

What fertilizer could I use in connection with potatoes on this field?

Schleisingerville, Wis. E. D. G.

In our opinion it is very doubtful if it is necessary to resort to the use of commercial fertilizer for corn on this field. The land having been in sod for the past three years and having received two applications of stable manure should be in good condition for growing a crop of corn. However, not knowing the kind of yields this field has been giving in the past, it is impossible for us to say whether or not it would be a good practice to use fertilizer for the corn which our inquirer expects to grow this coming season.

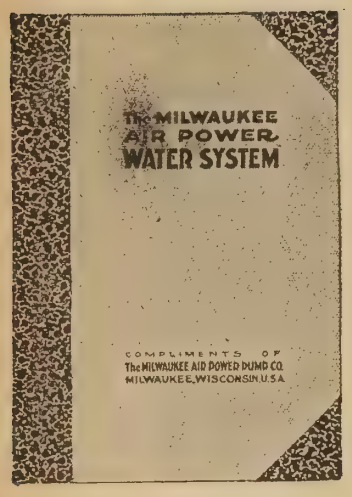
There are results which indicate that an application of from 100 lbs. to 200 lbs. of a mixed fertilizer, such as a 2-12-2 applied at the time the corn is planted is very beneficial to the early growth of the crop. We know of no evidence that fertilizer of this kind will help to keep the worms away from the corn. It might be possible, it would seem, if the fertilizer is applied to the hills or to the corn in the rows.

Fertilizers that are relatively high in potash seem to have given the best results with potatoes, such as a 4-8-10.

Weights and Yields by Breeds

Please give the average weight of all the dairy cattle breeds at matured age, their average per cent of fat, and their average yearly milk production.

Milford Center, Ohio. S. T.



The following table gives the average weight of the several breeds, the average fat test of their milk, and their average yearly milk flow.

Breed	Weight, lbs. bulls	Weight, lbs. cows	Fat, %	Yearly milk produced, lbs.
Ayrshires	1400—2000	1000	3.85—4.	6500 to 7500
Brown Swiss	1500—2000	1200—1400	4.	6500 to 7500
Guernsey	1500—1900	1000—1100	5.	6000 to 6300
Holstein	1800—2200	1200	3.3 —3.5	8500 to 9000
Jersey	1200—1700	800— 850	5. —5.5	5500 to 6000

Dehorning Cattle

HOARD'S DAIRYMAN:—In a recent issue of your paper you gave directions for dehorning cattle. I will give a way that has been successful with me in preventing excessive bleeding and is also used by my veterinarian. Take a cord similar to binding twine and wind it around the head at the base of the horns as tightly as possible, two or three times around. Then pass a string under that twine on each side and over the top of the head and draw the two strings up as tightly as possible, and there will be very little bleeding.

Connecticut. A. C. LAKE.

This is THE BOOK *that shows you* HOW

A practical reference book with many illustrations. Shows you exactly what Milwaukee Systems are, how they work, how easy they are to install, how they deliver fresh, pure water, always ***direct from the well.*** *Gives a list of users and tells what they say about Milwaukee Systems, and how they have increased farm profits for them. Sent free.*

WRITE FOR IT TODAY

Increase Farm Profits

This farmer went to a Milwaukee Air Power EXPERT. With many questions, the farmer searched for exact facts. The Expert showed him just how a Milwaukee System could be installed on his farm, and how it would *pay*. He was convinced. The system was installed.

His farm now has water piped directly from well and cistern to farmhouse, barn, lawn, watering trough and dairy. The System is doing exactly what the expert said it would do—*increasing farm profits*. Plenty of good drinking water for the cows has made milk production greater. Stock and even poultry are stronger and healthier. Crops are better. The farm is more valuable.

Our representative has been trained. Do as this farmer did—talk to our representative; there's no charge for consulting him. We have a representative in most counties. If you don't know him, write us.

MILWAUKEE AIR POWER PUMP CO., 876 3rd St., Milwaukee, Wis.

Washington, D. C., Weekly News

(Continued from page 44)

Council, who with others emphasized the necessity of heavy protective tariff against oriental oils, in addition to dairy product tariff protection; Hon. J. M. Hackney of Minnesota, who spoke for the dairy cattle owners, especially for the Holstein-Friesian Association of America, and Professor McKay of the N. A. C. B. M.

The hearing lasted from two to five p. m. and was marked by considerable cross questioning, especially by Senators Simmons and Nugent of the Democratic side of the committee.

While in Washington several of the representatives of the dairy industry went before the sub-committee on agricultural appropriations, to urge the appropriations asked for the Dairy Division of the Department of Agriculture for its research work, and its new barns and laboratories at the Beltsville experimental farm. They were assured of the interest of the committee, and as liberal appropriation as financial conditions would permit.

⚜

The Senate Finance Committee met on Friday and voted to open the bill to amendments, adding dairy products, sugar, a change in cotton schedules, and some other items. On motion of Senator Calder of New York, the schedules were fixed at six cents per pound for butter and butter substitutes, six cents for cheese, two cents per pound for condensed milk, five cents for sugar of milk, two cents per gallon for whole milk, and five cents per gallon for cream. These are the Payne—Aldrich schedules exactly.

Producer interests were not satisfied with these schedules for the emergency bill, and on Saturday morning, on motion of Senator La Follette, an effort was made to secure a change to ten cents per pound on butter, substitutes, and cheese. The effort resulted in a compromise to eight cents on butter, cheese, and butter substitutes.

The bill to be reported will therefore contain this eight-cent item on butter, butter substitutes, and cheese. No change has been made in the whole milk, cream, or processed milk items as brought in by Senator Calder, re-enacting the Payne—Aldrich rates. Powdered milk is not included, as this item was not named in the Payne—Aldrich schedules not being an article of commerce at that time.

⚜

The most important lesson of this entire experience is the necessity of securing more and better data, and for milk producer and co-operative butter and cheese interests to get together and prepare their case for the regular tariff hearings which will begin January 21, and continue intermittently until the proposed tariff law is enacted.

⚜

Chairman Potter of the House Committee on Foreign Affairs will introduce a joint resolution providing for the American invitation to foreign governments to participate in an International Dairy Congress in this country in 1922, within a few days. The whole matter, placed before Congress as told in Hoard's Dairyman some weeks ago, has been referred to this committee, and as the result of many endorsements of the project received by the committee, prompt action is anticipated.

⚜

Milo D. Campbell, President of the National Federation of Milk Producers, has opened an office in Washington, to remain through the present session of Congress, in the interest of dairy and co-operative legislation. Mr. Campbell will devote his first energies to getting the Capper-Volstead Collective Bargaining bill straightened out, and passed if possible. This bill is now in conference, with a strong effort to be made to eliminate the objectionable Senate anti-monopoly amendments. Mr. Campbell is also much interested in tariff legislation, and will undoubtedly soon take an active hand in this work. His office will be at the Occidental hotel, the same building in which the American Farm Bureau Federation Washington office is to be found.

⚜

Representative Haugen of Iowa, and Senator Gronna of North Dakota have introduced identical bills to control grain gambling. They propose to establish a system of dealing in grain futures, similar and parallel to the Cotton Futures Act, establishing definite conditions of future contract and delivery of grain, and prohibiting all other future sales except to be followed by actual delivery of the commodity. The bill is looked on as a definite step in advance in the way of constructive commercial legislation.

Tennessee Jersey Record

Sadie Heath, a Jersey cow owned by Edroth Jersey Farm, Tennessee, has made a new milk record for the breed in that state. In 361 days she has produced 11,939.8 lbs. of milk containing 673.7 lbs. of butterfat. She exceeded the record by the previous state champion by 500 lbs. of milk and lacked only 3.7 lbs. of butterfat of equalling the record butterfat production. Her highest monthly fat production was 68.99 lbs. fat and her lowest was 38.86 lbs. When she completed her test, she had been milking for 36 consecutive months. She began her record at the age of 9 years and 9 months. Her ration consisted of 12 lbs. daily of a mixture of 3 parts of corn, 2 parts of oats, and 1 part of oil meal. She refused to eat silage, but was furnished all the clover hay she would consume, usually eating 12 to 15 lbs.

First New York State Holstein Sale

137 Animals Sell for $490 Average

A state Holstein sale is no new thing in many sections but it is in New York. The state association was organized in its present form a year ago and one of the purposes of that association showed plainly in the first state sale held at Rochester, January 12—13. It was planned and advertised for a good sale of clean, high class cattle, which was exactly what it proved to be. It was such a sale as will give buyers increased confidence in New York Holstein breeders.

Prices did not rule as high as might normally have been expected, particularly on bulls, but we venture the opinion that had similar sales been held for several years previous, this one would have brought out a better average and that succeeding state sales of this character will bring better prices.

R. E. Chapin & Son topped the sale with Bonalevo Quality Parthenea, a splendid producing daughter of King Quality. As a 4-year-old she has just completed a 36.05-lb. 7-day record with 719 lbs. of milk. She produced 2,921 lbs. of milk in 30 days and even on the sale grounds produced over 100 lbs. daily on her semi-official test. W. H. Mace and Geo. N. Smith were the principal contending bidders for her, the former securing her for $3,950. Mr. Smith dropped out with a $3,900 bid.

Dygert Bros. did almost as well on their 36-lb. 6-year-old cow, Clycola Korndyke, an excellent individual, granddaughter of Pontiac Korndyke. She was purchased for $3,600 by Brock & Jenks with W. S. Moscrip bidding for Maaikenshof Farm, the last contending bidder.

Ormsby Korndyke Lad 11th from the Beaver Dam Stock Farm was the highest priced bull at $1,025. He is a son of O. K. L. from a 30-lb. cow now doing nicely on semi-official test. He was purchased by Geo. Abbott of New York.

Kelley, Haeger, and Baxter did the selling with Wood in the box.

Prizes of $200, $100, and $50 were offered by the state association to the county or district club having the best consignments judged on the basis of individuality and condition. Just before the sale R. E. (Bob) Haeger passed on the consignments, putting Chemung, Jefferson, and Oneida counties ahead in the order named.

Following is a list of all animals selling for $500 or more and names of the purchasers:

A. M. Cook, New York	
Meadow Lark Ophela Pontiac	$750
W. H. Mace, New York	
Bonalevo Quality Parthenea	$3,950
H. F. Farrington, New York

Rebecca Posch 2d	$500
Harry Yates, New York	
Foforit Posch Korndyke 2d	$500

Tolstrup Goes to South Carolina

M. R. Tolstrup has been appointed associate professor of dairying in Clemson College, South Carolina. Obtaining his Bachelor of Science degree in the Iowa State College in 1911, he spent one year as an instructor in the South Dakota Agricultural College. He then returned to Ames where he received the degree of Master of Science in Dairying in 1913. He served at Iowa State College as Assistant Professor of Dairying and then went to the U. S. Bureau of Markets for work in Vermont. Here he did valuable work along the line of marketing agricultural products, especially dairy and maple products. Upon tendering his resignation to the Bureau of Markets, Mr. Tolstrup engaged in the creamery business in Minnesota. After a year in commercial work he accepted his present position at Clemson College as Associate Professor of Dairying in charge of manufacturing.

What's the best Title to this Goodrich Picture?

Forty different money prizes ranging from $250 to $10—costs you nothing to submit a title. Contest runs from January 1st to April 1st. Send your suggestion to the B. F. Goodrich Rubber Company in either New York, Boston, Chicago, Kansas City, Seattle, Denver or Akron—and when next you buy rubber boots or shoes insist on the kind with the Red Line 'Round the Top.

THE DENMARK OF TODAY

(Continued from page 43)

ceiving six to seven cents per quart depending upon the quality.

At the present time practically all of the half million heads of households engaged in agriculture are in one or more organizations. All branches of the farm industry are as well organized as the dairy. Since no co-operative society handles more than one activity, there is a separate organization formed for every sphere of action. A Danish farmer could belong to 53 societies, 39 of which are co-operative, and not have their activities overlap. Those having the largest membership are the dairy with 180,000, bacon factories with 156,000, and co-operative stores with 244,000. The local societies are united into provincial societies and all of the co-operative societies were organized in 1917 under one central organization called the Central Co-operative Committee of Denmark. Together with the Royal Agricultural Society and the local agricultural societies they formed last year the Agricultural Union.

Organized Farmers

"The aim of the Agricultural Union," said L. Frederiksen, the secretary, "is to promote co-operation between Danish technical and economical organizations which bear relation to agriculture and the co-operative movement; to be ready to serve the government and parliament in questions concerning agriculture and to submit motions concerning their interest; and to fight against anti-social trusts and monopolies.

"We believe that this is a step in advance for the farmers' interests. The prosperity of the farmers caused by the war has not hurt co-operation but has advanced it further. I believe there is scarcely a farmer today who is not a member of some organization."

"I should say the farmers are well organized in this country," declared a business man to me. "It is so well organized, in fact, and at the present time in the hands of such capable men, that it is impossible for any outsider to get a hand in their business. On the whole it has been the best thing for the prosperity of the country."

"Co-operation has been the salvation of the farmers of Denmark," stated an American farmer of Danish birth who had spent the last four months at his old home. "It seemed to me that the country had advanced and prospered more in the last ten years than it had in the previous twenty."

Experimentation on the Farms

Not only are the farmers organized among themselves but the department of agriculture has its work identified so closely with them that the farmers have entire confidence in it and are eager to use the results which are secured. A visitor to the agricultural experimental laboratory is rather surprised to find no dairy or herd to be used for experimental purposes. All of the actual work is done on farms and in creameries and the results brought here and tabulated. In 1875 when Fjord began his experiments involving the use of ice in dairies which extended to cream raising and skimming by various methods of cooling, he found it necessary to have these tests made in dairies all over the country and this method has been used ever since.

It is due chiefly to this that, with later experiments, the separator, pasteurizer, and improved methods of ripening cream were introduced so quickly throughout the country. Three times each year the laboratory calls for butter from each creamery and has it scored by competent judges. The dairies are then informed of the quality so that any defect may be remedied and at the same time a review is obtained of the whole country's butter production. It is in this laboratory that Dr. B. Bang has carried out his research work in tuberculosis, but by the experimental work on the farms he has been able to work out his world famous system of control.

In order to be in constant touch with practical work, the laboratory holds annual meetings where the plans for experiments and their results are discussed with the practical creamery men and farmers. During the four-year period, 1901 to 1905, there were 4,390 field experiments, while from 1911 to 1915 there were 12,234, and from 1916 to 1919 there were 9,209 of these.

Firms supplying more than two-thirds of the seed have voluntarily placed themselves under the government seed control in Copenhagen which is now the oldest seed testing laboratory in the world. During the last year over 28,000 samples were tested here. A commission has been appointed as counsel, as regards seed control, to the agricultural department in which there are two trained seed experts, two farmers, and two representatives of the seed firm associations.

"It will be the continued policy of our government to encourage agriculture in every way possible," declared Mr. Mygdal. "Certain subsidies will be granted for this purpose but the great incentive for improvement must come from within. Our farmers have been compelled to co-operate because

GUERNSEY COW, IMP. PRIMROSE II DES BEAUCHAMPS, HAS A RECORD OF 681 LBS. FAT IN CLASS AA
OWNED BY WOODEND FARM, MINNESOTA

of the small size of their holdings but, because of this, improvement has been possible. Education is necessary to build up co-operation and we have supplied this through our government counselors and our agricultural high schools."

The people's high schools and the agricultural high schools are said to be mainsprings of the co-operative system for here it is discussed in all its phases by the students and the graduates become leaders of the movement.

Butter and Bacon Most Important

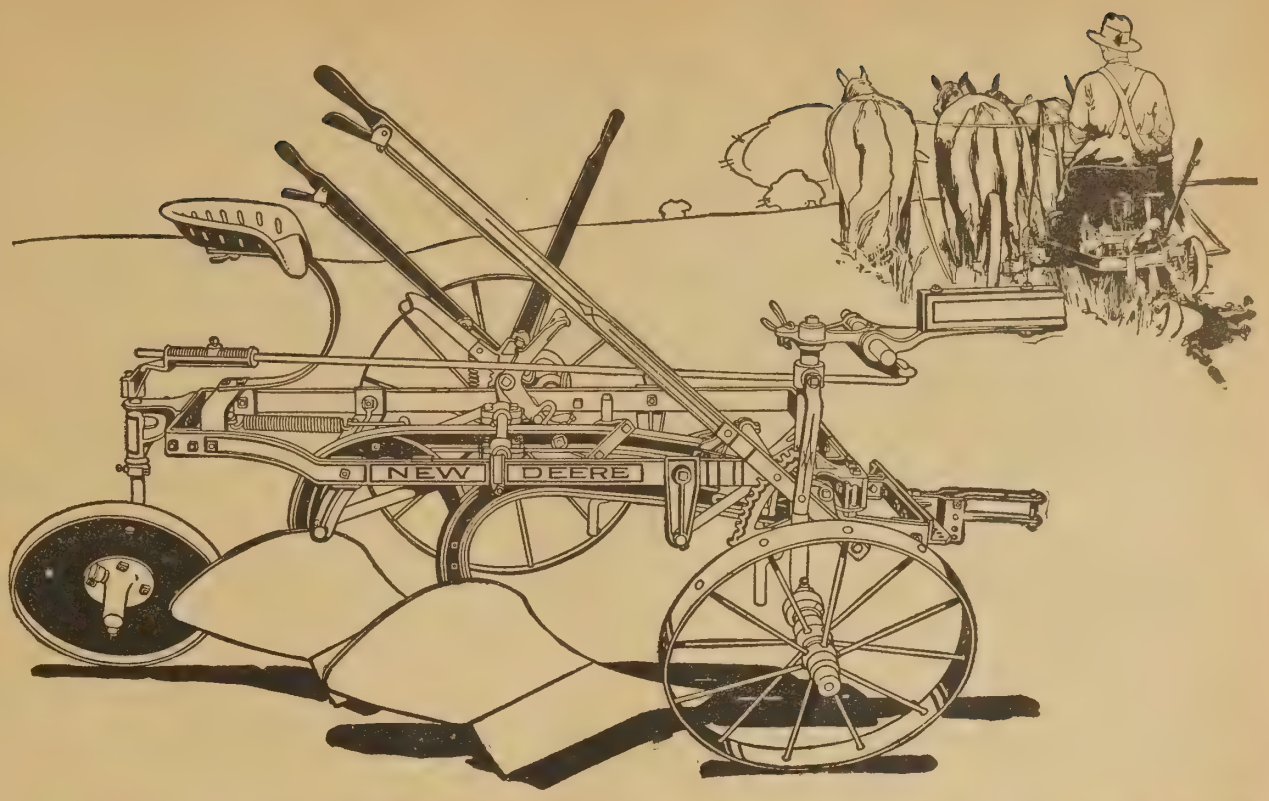
About 50 years ago the farmers of Denmark, unable to make a living selling grain, Europe at that time being flooded with cheap grain from America, turned to milking cows and raising pigs. With the development of the co-operative creameries and bacon factories, butter and bacon became the two main products for export. The whole attention of the country was turned toward the production of these two articles, the greater part of which goes to the English market. Every effort was made to produce the particular quality of butter and bacon required by that people. The surplus butter export of Denmark in 1914 was very nearly equal to one-fourth of all the creamery butter manufactured in United States last year. By 1890, of all butter imported into England, 41.6 per cent came from Denmark and in 1914, 43.4 per cent. In 1914 the Danish bacon export was 53 per cent of the total bacon import to England.

The agricultural interests not only specialized on these products but standardized them as well. The Lur brand was introduced in 1900 by a society to identify all Danish butter and within five years all the dairies made use of this brand. In 1911, the change was introduced so that in addition to being a brand of nationality it became a brand of quality, the government keeping control by supervision and testing three or more times each year. The English people know that when they secure Lur brand they are getting butter that is made from pasteurized cream, that it does not contain more than 16 per cent moisture and is of good quality. At the same time a similar mark was ordered for use on all Danish bacon which was for export trade. This mark guaranteed it to be from hogs examined by government veterinarians and found to be free from any signs of tuberculosis.

The farmers of the Middle West, now face to face with the competition of cheap grain, meat, and butter from other parts of the world, have a problem similar to that which the Danes overcame by getting together and producing certain products with which others could scarcely compete. Professor Boggild, who was very active in the beginning of the co-operative movement, who has traveled in this country and has studied carefully our system of agriculture, was asked if he believed it possible for the farmers to organize in this country as effectively as they had in Denmark.

"I rather doubt it," he answered and then added with a smile, "in your country the business men like to tell the farmers too much of what they ought to do."

More Than 10,000 Guernsey Records



On December 15, 1920, the number of Advanced Register records completed by Guernsey cows exceeded the 10,000 mark. A total of 10,033 records had been completed by 8,469 cows. Six cows had completed five records each; twenty-six had completed four records; 196 had completed three records; and 564 had completed two records. The average production of all records completed by Guernseys of all ages was 9,068.27 pounds of milk, 454.06 pounds fat, with an average test of 5.005 per cent. Of the total number of records, 37.6 per cent were completed by cows two years of age.

The system of yearly testing for the Advanced Register, which has been adopted in only slightly modified form by all dairy breed associations, was first established by The American Guernsey Cattle Club in May, 1901, almost a score of years ago. The first cow to complete an Advanced Register record was Glenwood Girl 6th 9113, whose record was 12,187.33 pounds of milk and 572.30 pounds butterfat.—AMERICAN GUERNSEY CATTLE CLUB.

IMP. FERN'S OXFORD NOBLE

Jersey bull sold by Tom Dempsey of Ohio for Messrs. Holman and Neel Bros. of Georgia to P. H. B. Frelinghuysen of New Jersey for $25,000.

Costs Less Because - It Lasts Longer

IT is the use of a plow that tells its real cost. The plow that gives extra years of good service costs less in the long run. The success of the New Deere Gang is based on that truth. The most widely used wheel plow for 26 years, it has earned the reputation for giving unusually good service an unusually long time.

Get This Big Free Book

We will be glad to send you, free, a folder illustrating and describing the New Deere Gang. Also our big free book —"Better Farm Implements"— 114 pages—describes full line of high grade farm implements and machinery—gives valuable information on implement operation. Write today. Address John Deere, Moline, Ill. Ask for package DG-414.

NEW DEERE GANG

Steel used in the New Deere Gang is unusually high in carbon—it is much harder, tougher and stronger than the steel that goes into ordinary plows. That's a big reason why the New Deere Gang lasts much longer.

Its genuine John Deere bottoms scour, pulverize and make a good seed bed—do the work the way the farmer wants it done. There is a type for every soil. Made of the best plow bottom materials, these bottoms are unusually long-lived.

Makes Uniform Seed Beds. Double bail construction causes the bottoms to reach plowing depth almost instantly and maintain even depth. Even width of furrows is insured by a handy lever adjustment, controlling the front furrow wheel.

Pulls Light. All-wheel-carried—no landside friction—no dragging of the bottoms. And, remember, the clean scouring qualities and general high grade construction of John Deere bottoms are great aids to light draft.

A Boy Can Operate It. Foot lever and auxiliary hand lever make it easy to lift the bottoms under all conditions.

Quick Detachable Shares. Loosen one nut to remove a share; tighten the same nut and share is on tight.

Tell your John Deere dealer to show you the New Deere Gang. Inspect its features that insure good work, ease of operation and long life. You will find it the gang plow of real economy.

Illinois Agricultural Association Holds Sixth Annual Meeting

E. L. BILL, ILLINOIS

More than eight hundred farmers met at the La Salle Hotel, Chicago, January 13 and 14 for the sixth annual meeting of the Illinois Agricultural Association.

The past year the I. A. A. increased membership from 65,000 to 106,000; has created 10 working departments and gathered together an office force of 48 persons on full time and 64 field workers on part time pay. The first vigorous spurt of organization is over and the period of solid work and definite accomplishments is here.

"Better Marketing" the Convention Password

Practically all of the first day's program was a recitation of work of the past year. Marketing of farm crops is considered the biggest business problem of the Illinois farmer. Four marketing departments, Live stock, Grain, Fruit and Vegetable, and Dairy Products are established under the directorship of competent authorities. Their chief aim is to create marketing methods that will be economical, net producers a legitimate return, and at the same time be fair to consumers. Marketing has been recognized as being of equal importance to production for a permanent agriculture, and the reports of these departments show that marketing will take more time, harder work, and deeper patience to solve than other problems.

In the opening address, President Howard Leonard of Eureka, said that marketing must come first in the work of the Association. A study of the transportation system to create an efficient service at a cost not out of proportion to the service is second. And to aid the general assembly to make laws that are just and equitable come third. "Other factors that must stand close to the top of the list," said Mr. Leonard, "are education—and publicity of our aims to our own people."

Freight Bills as Well as Chinch Bugs Eat the Farmer's Corn

Clifford Thorne, director transportation department of the American Farm Bureau Federation, declared it to be unfair for the second greatest industry in this country, the railroads, to be assured by law of a return of 5½ or 6 per cent, when the first great and largest industry, agriculture, is assured nothing and is getting very little. Of the one thousand delegates, not one indicated that he was making 5½ per cent on the investment in his farm the past year, only a few indicated that they made that much interest on the investment during the war. Mr. Thorne said that organized agriculture must safeguard their interests just as the railroads have done, must have transportation experts and an adequate department to gather statistics at any time, to be able to represent the farmers of the country at any time.

Dean Davenport Urges Scientific Research

"Our first problem," said Dean E. Davenport of the University of Illinois who opened the second day session, "is to make our agriculture profitable when competing with world markets, in which we can claim little advantage now that we are a creditor nation. Our next problem is to engage and hold upon the land our typical American citizen, and our third great problem is to establish and maintain on a paying basis a permanent production." The I. A. A. has taken a giant stride in this third accomplishment in the Rock Phosphate and Limestone Department which has in its infancy of organization delivered 700 carloads of fertilizer at a saving of $25,000 and laid the foundation for an unlimited future. "Agriculture in the most of the world is an empirical art," continued Dean Davenport, "empirical not because so many principles underline its practice but because these principles are so many, so overlapping, and so interlocking that the individual man has been unable to disentangle the combination.

Dean Davenport further spoke for a law requiring tenant and land owner to put back into the land some of the fertility taken out for the sake of farming posterity. More generous credit systems for land buyers and a fairer federal tax for public improvements were also dwelt upon by the speaker.

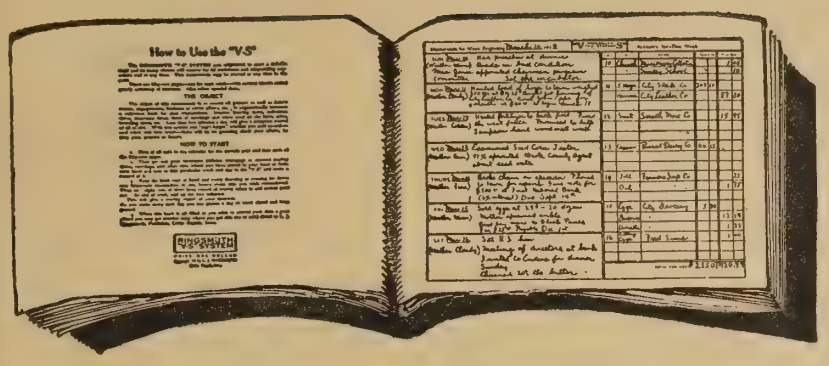
M. L. Mosher Speaks from the Heart of the Organization—the Farm Bureau

"Ten years ago there were no Farm Bureaus with employed men working on these jobs," said M. L. Mosher, president of the state and national county agents associations, in the speech he made before the annual meeting. "Nine years ago there were about 20 county farm bureaus working largely as individual units. When the I. A. A. was organized for business there were about a dozen states in which the farm bureaus were federated into state associations. One year ago the American Farm Bureau Federation was organized. The whole farm bureau movement is new.

"Now there are approximately 150 farm advisers and assistants in Illinois, and there is no other such small group of men who come into as close a personal touch with the entire membership of 106,000 farmers as do the farm advisers. There are approximately 2,000 county agents in the United States who come in personal contact with the 1,500,000 farmers federated in the American Farm Bureau Federation.

"Our great job requires, first of all, co-operation among the individual farmers under the leadership of county officials—then among the counties under the leadership of the state—lastly among the states under the leadership of the national officers."

Election of Officers and Committeemen



January 13 was election night. Howard Leonard of Eureka, Woodford County, was chosen president by acclamation. Z. M. Holmes of Mossville, Peoria County, was re-elected vice president.

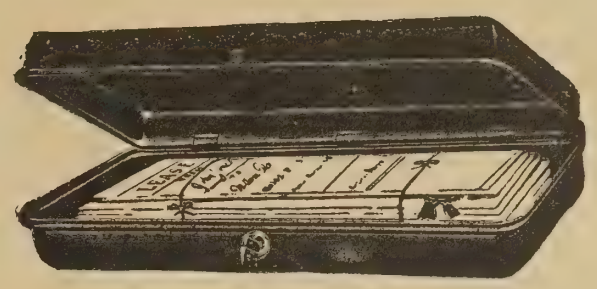
Farmers Share Their Food

President J. R. Howard closed his speech with a suggestion that the farmers of America might well contribute enough corn to prevent any person in the wide world from starving to death. "The world is out of joint," said President Howard, "when we have such a surplus that they do not offer the cost of production for food and yet in the same breath declare that half of the world is hungry. Let us say to Hoover's European Relief and to China that we will contribute out of our stores if the other

(Continued on page 69)

Your choice—*without charge*

The Ringsmith "V-S" Farm Account Book



IT pays—and pays well—to know where you "are at". Uncle Sam's income tax law applies to practically every dairy farmer. Heavy penalties (fines of from $20.00 to $1,000.00) can be imposed for failure to make returns or for fraudulent statements.

And "ignorance of the law is no excuse".

Don't **guess** how much you received for your milk or your hogs or wheat or other crops! Don't **guess** how much you paid out for interest, rental, hired help, repairs, etc! Don't guess — it pays to know!

How can you **know** your returns are correct unless you keep track from day to day of cash received and cash paid out?

It isn't necessary to start a complicated system of bookkeeping to know where you are at—not when you use the Ringsmuth "V—S"! Any twelve year old boy could use it—yet it is complete enough for all practical purposes. It contains places for keeping track of all your farm cash operations from day to day with monthly and yearly summary, has a place for inventory at beginning and end of year—and also contains a digest of what is expected of you under the income tax law. It is just exactly the simple, yet thorough, account book you have been looking for.

A Safe Place to Keep Your Valuable Papers

WHAT happens—usually—when you take out an insurance policy or a lease? What have you done with your Liberty Bonds and your War Saving Stamps—and your other valuable papers—papers that cannot be replaced?

If you are anything like the man I am pretty well acquainted with, you handed them to Mother and said: "Here, Mother, take care of these papers," and Mother proceeded to tuck them away in a corner of the desk or somewhere, where only she could ever find them! Which is all right! Bless Mother's heart! She is a mighty good person to watch such things! But why not get one of these steel boxes for her? She'll probably hide the box, but your papers will all be in the same place any way!

These boxes are made of good heavy steel plate, with strong lock and two keys. They are an ideal place for keeping Liberty Bonds, War Saving Stamps, Insurance Policies and any other papers you wish to safely keep.

Neither of these articles is for sale. There is no price set on them! But we will gladly send either one to any reader who will go to the trouble of getting just two subscriptions for Hoard's Dairyman, and send them to us. These subscriptions may be either one year for $1.00 or three years for $2.00—new or renewal. Your own renewal may be included, but does not count unless accompanied by at least one other.

Both articles will be sent for a list of just three subscriptions.

Use the coupon below or write the same thing on a sheet of paper.

GRANDFATHER NEVER OUTGROWS HIS JUNIOR DAYS

What Do They Cost?

THAT is the wrong way to go about it. Some things that cost five dollars are worth one dollar and some that cost one are worth five. Ask, rather, what are Circle A Cork Brick worth? The answer is, "What are the health and security of your cows worth?"

Circle A Cork Brick make stall floors warm, resilient, non-slippery and sanitary. Cows that use them are protected from garget, rheumatism and sore hoofs, from injuries due to slips and falls and infection from unsanitary floors. Circle A Cork Brick are worth what that protection is worth to you.

What they cost is another matter. Write us the number and size of your stalls and we will tell you all about cork brick floors, and send you a copy, free, of the book, "Better Stall Floors," and a sample. Get the facts before you decide.

Armstrong Cork & Insulation Company

PUBLIC AUCTION

A 600-ACRE IOWA FARM

At front door of Court House, in

Marshalltown, Iowa

Saturday, Feb'y 5, 1921

at 2 P. M.

This farm lies in a body, eight miles from Marshalltown, the County Seat, on a graveled road.
Adjoins the town of Albion, Marshall County, Iowa. Splendid community, fine school and churches.
Large farm house and good tenant house. Matured groves. Large basement barn with ample granary. Cattle shed 60x120, hog house, cribs, garage and icehouse.
Running water. Windmill and deep well with supply tank and water piped to buildings.
Excellent shipping facilities. M. & St. L. depot and stockyards at Albion adjoin the farm. C. & N. W. and C. G. W. at Marshalltown.
Good blue grass timber pasture and considerable native hard wood timber.
Has been used as a stock farm for more than thirty years and is in a high state of cultivation.
One of the best stock, or dairy, propositions in Central Iowa.
Possession March 1, 1921.
Sold under order of Court to settle estate.

Address:—G. A. Mote, Sole Referee, or F. L. Meeker, Attorney for estate. or E. N. Farber, Attorney, Marshalltown, Iowa

JOHNSON FISH CO., Dept. 8, Green Bay, Wis.

Junior Letters

Hoard's Dairyman Juniors:—I am staying with my uncle. He keeps a country store. But my cousin lives on a farm and has some cows. The breed is Guernsey. We have one big red cow and two horses. Their names are Doch and Prince. We have one big old sow. We are going to butcher her soon. She will weigh 500 lbs. dressed. We have about 50 chickens, some Rhode Island Reds. The rest are mixed. I have two rabbits. They are Belgian hares. Next summer I am going to keep about 4 does and 2 bucks. I am going to get a white one, a black one, and a Belgian hare. I have their winter home made.

I would like to have the juniors write to me. My address is R. F. D. No. 2, South Boardman, Mich. Lyle Shuert.

Hoard's Dairyman Juniors:—I live on a 120-acre farm in Minnesota, 3½ miles southwest of Elk River. If any of the junior live near Elk River they may know where I live. I am 14 years old and am finishing my 8th grade this year. Most all the juniors are owners of some stock, and I am the proud owner of a pure-bred Berkshire pig. She is eight months old. I intend to keep her till she is a year old and then I am going to sell her and buy another. And, believe me, it is going to be a Berkshire, too. Well, this is a long letter for the first time so I will close.

Minnesota. Mildred Johnson.

Hoard's Dairyman Juniors:—We have about forty head of cattle. We have some small calves. We have some cows that are going to freshen soon. We raised about 350 bushels of potatoes. We dug our potatoes with a digger. We have six head of horses. We bought some Jerseys last spring at the sale. We paid $800 for one cow. I did not join the pig and calf club as I did not have a good calf. I am in the sixth grade this year. I passed in all my studies last year. If any of the juniors want to write to me my address is R. F. D. 4, Box 9, Tomah, Wis. John L. Hill.

Hoard's Dairyman Juniors:—We sold our Holstein and Jersey mixed cow for $125 and still have two Jerseys left. I bought a load of loose alfalfa hay two weeks ago for $32 a ton and a ton of wheat hay at $22. I feed the cows about 12 lbs. a day of beet pulp, bran, ground barley, cottonseed meal, and cocoanut meal with alfalfa hay and pasture.

I am going to get a pure-bred Duroc Jersey sow, weaned, for $50. The boar was bought in the East for $250 when nine months old. I don't have much time to do much work except Saturday because I have to leave at 7:30 in the morning for school and don't get home until 5.

California. Meredith E. Owen.

Hoard's Dairyman Juniors:—We have 23 cows and 5 horses. One of the horses is small and was never broke right. We hitched her up to the corn cultivator this spring. She ran away so we put her in the pasture.

I have a lot of fun with my fox terrier dog, Bud. He killed two weasels this summer. There are no rats left since this summer and fall.

The day after Thanksgiving our school had a basket social and entertainment. The two rooms cleared $100 from the basket social.

I am 10 years old and in the sixth grade.

I would be glad to hear from some of the juniors. My address is R. R. 1, Waukegan, Illinois. Robert Dupins.

Hoard's Dairyman Juniors:—We have 43 head of Guernsey cattle. I like to do chores and milk. We have about forty chickens. I am eleven years old and in the fifth grade at school. I can drive a team. We have five horses. We have a Ford car but can not run it. We have a tractor and electric lights. I have one brother and two sisters; their names are Billie, Edna, and Willie. I live on a 140-acre farm. Today I did not go to school because it is storming too much. We are having a heavy snow storm. This will be all for this time. I would like to have some of the juniors write to me. My address is Box 69, R. 8, Green Bay, Wis. Raymond Pemperin.

Hoard's Dairyman Juniors:—We have thirteen cows, three heifer calves, one pure-bred sire, and three horses. I have a dog and three cats. I have one grade calf of my own. We live on an 80-acre farm. I am ten years old. I read the juniors' letters. I like them very much. I wish some of the juniors would write to me.

Wisconsin. Robert Gilbol.

Hoard's Dairyman Juniors:—I am a boy 12 years old. I live on a ranch near Ashland, Oregon, near the head of the Rogue River Valley, famed throughout the world for its fine fruit, live stock, and the finest salmon fishing in the United States.

I have a calf that I paid $275 for. She is a pure-bred Shorthorn. Her name is Leafitype. Her dam's name is Cloverleaftel and her sire's, Sixtype. She is 1 year, 8 months old and is due to calve in June. I go to school in a jitney buss. I am in the 8th A grade and will enter high school in January.

Wishing all the juniors good luck.

Oregon. George K. Lowe.

Born Cooks and Others

Until recently the woman on the farm, though a born cook and a peerless housekeeper, has often been handicapped by a lack of information concerning certain new methods that have been adopted in the cities.

To some extent this has been true in the case of Jell-O, which in the cities has for several years been the most popular preparation for desserts and salads.

As rapidly as possible steps have been taken to spread among all women complete knowledge of the subject.

In Domestic Science and Home Economics classes, in city and country, trained women have demonstrated the simple and economical Jell-O way, and recipe books are being distributed thoroughly. As Jell-O is now sold in practically every general store in the country, farmers' wives are enabled to share the privilege enjoyed by their city sisters.

The Jell-O Book, containing recipes for all kinds of plain and elaborate desserts and salads, and explaining the easiest and cheapest way to make them, will be sent free to every woman who writes and asks us for it. It is a book which every housewife in America should possess.

Jell-O is put up in six pure fruit flavors: Strawberry, Raspberry, Lemon, Orange, Cherry, Chocolate, and sold 2 packages for 25 cents.

THE GENESEE PURE FOOD COMPANY
Le Roy, N. Y., and Bridgeburg, Ont.

Reduce Concrete Costs

Concrete adds to the value and appearance of your farm. It is easy to put in your own concrete improvements with the Wynn Barrel Mixer. It saves money for you and ends the back-breaking task of mixing by hand. The Wynn is made for farmers use. Simple, strong and easy to move. Mixes 2½ cu. ft. at a batch—as good a mix as any high priced big contractor's machine. One man can run it—will keep 6 men busy. Easily attached to any 1 or 1½ H. P. engine. Will save its cost on the first jobs. Write for description.

FARMS FOR RENT

For Rent—Two hundred and forty-acre farm, joining city limits of Duluth, about one mile from street car line. Stable room for one hundred head of cattle. Modern cow barn just completed 36x116, fifty-one James stanchions, water system, drinking cups for each cow, bull pen and calf pen. Large haymow and granary. Good horse barn, capacity nine horses, also box stall, haymow and granary. New machine shed 26x60. Good hog house, ice house and milk house, one good house, vegetable cellar 20x60. About seventy-five head of high grade Holstein cows and heifers. Approximately fifty cows will be Milking during season 1921. One fine registered Holstein bull, seven good horses, completely equipped with modern machinery. About one hundred acres mostly new seeded timothy and alsike, about one hundred forty acres under cultivation, balance good pasture. Land a rich loam, spring creek running through farm. Prefer to sell all personal property. Rent and terms will be reasonable to the right party. Duluth offers an exceptionally good market for anything produced on the farm. Address BOX 587, care Hoard's Dairyman.

Wanted—Good, responsible share man, one who can furnish references. Have 200 acres of good work land, shed room for 20 acres tobacco. Good house and good buildings all electric lighted. Farm is seven miles from Edgerton, 1½ miles from creamery. ALFRED THRONSON, Route 3, Edgerton, Wisconsin. 1-3

Renter wanted—To buy half interest in all stock and feed and operate 160-acre dairy farm. High grade Holstein cattle. Can give possession any time. GERALD TOWNSEND, Poynette, Wisconsin.

On account of their being unable to realize expected funds from the sale of their property, three men who were to become new tenants on farms in our organizations March first have been compelled to cancel their leases. These farms run in size from 50 to 300 acres and are now for rent as dairy farms on a share basis. We will furnish the pure-bred Holstein cows or, in case of exceptionally good dairy farmers, will sell them a half interest in the cattle on such long-time terms that the young stock raised will pay for their half interest. In either case tenant is to furnish machinery, horses and all labor. For further paticulars address WOODLAWN FARMS, Sterling, Illinois.

For Rent—A farm of 400 acres of choice land close to Chicago and joins fine suburbs. Suitable for dairy, grain, truck or stock farming. Completely furnished with tools, machinery, stock, feed, etc. Will rent to good party who will buy the personal property at a bargain. A choice opportunity for the right party. OWNER, 315 Clinton Ave., Oak Park, Illinois.

For rent or sale, 1,600 acres Red River Valley, fully-equipped with buildings, machinery, etc. THE BANKERS' INVESTMENT TRUST, 905-6-7 Pioneer Bldg., St. Paul, Minnesota.

For Rent—Excellent 80-acre farm near Marshfield, Wisconsin, forty under plow, twenty-five in stump-pasture, balance timber. Fair buildings on place. Best of references required. T. G. BREAW, Waukesha, Wisconsin. 2-2

Plumb's Book Revised

Types and Breeds of Farm Animals Enlarged and Brought Up-to-date

A revised edition of Professor Charles S. Plumb's "Types and Breeds of Farm Animals" is published by Ginn and Company. It is nearly fifty per cent larger than the first form of this text published in 1906 and contains much new material. Two hundred seventy-eight new illustrations are used.

This book is the standard text on breed types. Within its covers is found a clear, readable discussion of every important breed, its origin, development, and present adaptation. No other volume gives so complete discussions of farm types. Its information is presented in four parts, given to the horse, to cattle, to sheep and goats, and to swine.

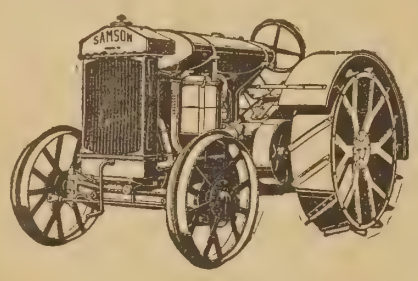
You Can Make Your Farm More Profitable

Once you take up power farming you will find many new ways to make more profit. With a tractor you can arrange your fields so as to cultivate them faster, better and more easily and you can utilize all the waste corners that you will have as long as you use horse-drawn implements.

Thousands of Samson Model "M" Tractor users who have made these profitable changes say this is one of the reasons why they showed a profit last year, and why they are sure of a profit this year. They make a big cut in operating expenses and provide a larger margin between producing and selling costs. You can do the same.



You can get the gain that comes by replacing slow and expensive horse tillage with the speedy, powerful Samson. You can get rid of an excessive number of horses and use the feed and pasture for profit-paying beef and dairy cattle.

The Samson will do your tillage work better, faster and cheaper than you ever could do it before—and at the right time.

Finer crops result. They command the best market prices—*all at lower cost.* The Samson also provides the most economical and most dependable power for belt-driven machinery.

Power farming will come to every farm, sooner or later, taking the place of horse farming—just as modern farm implements have taken the place of the crude tools of years ago. It is the only logical solution of the farm profits problem.

You will benefit by getting this Samson power viewpoint—it opens up greater opportunities—shows you sources for profit that you did not know existed on your land, and makes farm life something more than drudgery.

Want to Cut Your Operating Costs? Write Us

We have some information bearing on Samonized Farms that will help you. Now is the time to get ready to make your land pay every dollar that is in it. Send us a postal. No charge and no obligation. Do it today.

Cow Waters Herself

with this wonderful new Libbey Automatic Water Bowl. Animal moves lever, opening water valve, when it starts to drink. Lever swings back, closing valve, when animal stops drinking.

15% More Milk

Milk is 87% water, and cows cannot give their greatest yield unless they have plenty of water constantly within reach. Farmers who use Libbey Bowls report an increase of 15% to 20%, which soon pays for the bowls.

Libbey Automatic Water Bowls

are the most sanitary and successful ever invented. Each bowl controls its own water supply, operated entirely by cow, and may be put at different heights, or in any stall or pen. No float tank required. Cannot overflow; cannot get out of order. Almost no water left in bowl to become stagnant. They save labor and feed and increase milk. Prevent spread of contagious diseases, as each cow has her own bowl and no water can pass from one to another, as with old-style bowls. Very simple and easy to install. Write for circular and prices, also FREE DAILY MILK AND FEED RECORD.

If interested in Stanchions, Stalls, Carriers, etc., ask for free General Catalog.

The Human Side of Cow Testing

(Continued from page 47)

fifty wheat cakes, Wilbur getting on the outside of most of them. His mood seemed to improve with every helping, but he still said little, appearing quite thoughtful. After breakfast I explained that I would need a place where I might test the samples I had taken, whereupon he insisted that I work in the kitchen. Accordingly I set about my testing, he going to his work in the field. At noon I assumed the role of cook again, making some more of his beloved biscuits.

"I wish you would tell me how you make those biscuits," he said, covering his sixth with butter and honey. "I have tried to make them, but they always turned out hard enough to kill an ox."

"That sounds as if you had been forgetting to use baking powder," I volunteered, and so he had. For this culinary tip he seemed deeply grateful, and from then on we got along beautifully. After dinner he took a real interest in the results of the tests, and listened attentively to the few suggestions that I offered.

"I don't mind telling you now, kid," he said, not yet admitting that I have any other name, "that before you came I didn't intend to let you on the place. I had made up my mind that I couldn't stop to bother with such tomfoolery. But when you came and made those good biscuits and pancakes for me, I decided that you must be a pretty decent sort of a fellow after all. So you can come each month after this, and I'll keep the weights for you just as you want me to."

After spending another hour or two with him, he took me to my next stop. There and at the next few places on my route I learned, by piecing together bits of information from various sources, the reason back of my peculiar treatment at Wilbur's and the humor William Kent saw in starting me out there. Several times was I asked, "How did you get along at Wilbur's?" and many were the looks of amazement when I said that all had gone smoothly. Wilbur's wife, it seems, divorced him recently, since which he has been in a very unhappy mood. Though formerly he had agreed to enter the association, after his wife left him he gave everyone to understand that he "wouldn't let that tester on the place." Accordingly the other members of the association decided to make a thorough tryout of Horace Evans, cow tester, by sending him there first. I hope that they are satisfied with the result! I realize now, of course, that by my kitchen activities at Wilbur's I have unwittingly signed an agreement to get three meals a month for him, but I shall count that fully worth while if it is the way by which a good herd replaces those scrubs of his.

As ever,
Horace.

(Editor's Note:—This is the first of a series of six letters prepared by Frank M. Chase. The next will appear in an early issue.)

Farmers of Fulton County, Illinois, Vaccinate Own Hogs

During 1920 farmers in Fulton County, Illinois, vaccinated 22,000 head of hogs at a saving estimated at $13,000. It was demonstrated that hogs weighing 30 to 90 lbs. could be vaccinated for 38 cents each. The charges formerly made for such vaccinations varied from 75 cents to $1.00. The serum furnished the farmers through their farm bureau has cost approximately $9,000. The same amount at former prices would have cost $22,000.

County Agent B. H. Taylor writes: "Not only has the saving effected by the farm bureau system of vaccinating been important but the farmers have secured better results in avoiding breaks and in avoiding abscesses where they have vaccinated their own hogs than where veterinarians have heretofore done the sam work. It has been found that the vaccination has been carefully done by farmers who work upon their own herds. Furthermore, farmers have observed that work done by veterinarians in vaccinating hogs in Fulton County has been much more carefully done than previously."

Association Notes

(Continued from page 51)

ette County. The top price was $800. December 3.4% market milk sold for 35c per gallon. The creamery paid 43c per pound for fat. Milk retails for 14c per quart, butter for 45c per pound, and cheese for 35c per pound.

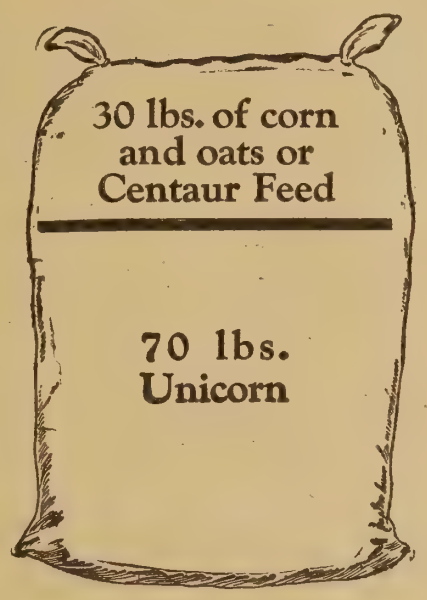
McGregor, Iowa:—One pure-bred bull was bought to replace a grade. Three unprofitable cows were weeded out of one herd. Cottonseed meal is being fed this year where it was never fed before. All of the members are well pleased with the results. Milk retails for 12c per quart and butter for 70c per pound. Feed prices are: Silage, $6 per ton; mixed hay, $15; alfalfa, $28; cottonseed meal, $60; oil meal, $65; bran, $39; oats, $35c per bushel; barley, 68c; corn, 60c.

Pioneer, Minnesota:—Market milk in December sold for $4.83 per cwt. The creamery paid 71c per pound for fat. Butter retails for 55c per pound. Feed prices are: Silage, $4—$5 per ton; hay, $8—$14; bran, $34—$40; oil meal, $49—$70; molasses, $65; beets, $8; corn, 45—50c per bushel; oats, 35—40c; barley, 50—55c.

Emmet County, Michigan:—December market milk sold for $3.75 per cwt. The creamery paid 52c per pound for fat. Local prices for feeds are: Corn meal, $42 per ton; bran, $40; corn and cob meal, $40; ground oats, $40; clover hay, $25; silage, $8; oil meal, $45.

Butler Road, Ohio:—Four cows were weeded out this month. Some official testing is being done and feed is bought in carload lots. December market milk testing 3.5% sold for $3.65 per cwt. and 5c per point above. The condensery paid 54c per pound for fat and $2.90 per cwt. for milk. Milk retails for 15c per quart and butter for 50c per pound. Feed prices are: Oilmeal, $48 per ton; cottonseed meal, $54; bran, $36; corn, $18; International Feeds, $48; oats, $1.90 per cwt.

Lake County, Illinois:—This association is a one hundred per cent pure-bred bull association. Each member has one or more silos and most of the farms produce enough alfalfa hay for their dairy cows. Seventeen of the 24 herds tested are wholly or partly pure-bred. One member, Mr. Kane, had his herd tested for tuberculosis for the second time during the month. The first test showed a few reactors, but the second time every animal passed the test. Milk prices vary from $2.60 per cwt. for 3.5% milk to $5 per cwt. for Jersey milk. Feed prices for December: Silage, $8 per ton; hay, $24—$28; corn and cob meal, $20; ground oats, $30; bran, $34; oil meal, $58; cottonseed meal, $55.



Allenton—Kohlsville, Wisconsin:—During December 16 cows were sold to buyers from Nebraska. One member has installed drinking cups for his cows; this leaves but one member in the association without them. All herds are headed by pure-bred sires.

Webster County, Missouri:—In December the creamery paid 40c per pound for fat. Feed prices are: cottonseed meal, $50 per ton; bran, $38; corn, 75c per bushel; oats, 60c per bushel; silage, $7 per ton; clover hay, $15.

Merrimac Valley and Strafford—Carroll, New Hampshire:—One new pure-bred bull was purchased in December. An auction sale of surplus stock was held at one farm. Market milk testing 3.7% sold for $4.38 per cwt. and 4c per point above. The creamery paid 76c per pound for fat. Milk retails for 15—17c per quart. Feed prices are: Silage, $10 per ton; hay, $25; bran, $45; corn meal, $45; oil meal, $63; cottonseed meal, $49; gluten, $60—63; ground oats, $54; New Hampshire Dairy, $66.

Feed Unicorn With Home-Grown Grains

Feed this way with clover hay

Centaur is a general purpose feed. Fine for young stuff and dry cows and just right for widening Unicorn.

You cannot produce milk profitably on home-grown grains alone, no matter what their price.

They will go farther and yield a real profit when fed with Unicorn Dairy Ration.

A seventy-thirty mixture is about right for most cows. It produces $4 worth of milk for each $1 worth of feed.

Don't deceive yourself. You can't mix your own grains with high-protein oil meals and beat Unicorn in final cost or results.

Feed Unicorn with home-grown grains for profit.

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Sterility From Infection

Infection by the Bacillus abortus of Bang, which causes the "abortion disease", is by far the commonest cause of sterility. It induces chronic inflammation or metritis of the womb and that condition technically is termed catarrhal endometritis. Such infection is also the common cause of failure to come in heat (estrum), irregular periods of heat, constant heat (nymphomania), and retention of the afterbirth.

The chronic womb trouble mentioned causes more or less abnormal discharge from the vagina. This arises from the diseased condition of the lining membrane of the womb, and that creates conditions unfavorable to the life and development of the egg, or germ cell (ovum), or, later, the embryo fetus. These abnormal secretions of the womb are, indeed, deadly both to the female germ cells and male sperm cells which unite to cause conception. In sterility cases due to infection the lining membrane of the Fallopian tubes becomes similarly diseased and in time the ovaries may also be affected so that they do not function normally.

When retention of the afterbirth has resulted from infection of the womb by the Bacillus abortus, pus infection due to other invading germs commonly results or may occur after removal of the afterbirth, if disinfection of the treated parts has been inadequate or inefficient. Pus gathers in a womb so affected and conception cannot occur in that condition.

When infection involves the Fallopian tubes, thickening of the walls may prevent access of the sperm cells of the male, or descent of an ovum from the ovaries and steriliy results.

When the ovaries are invaded, conjointly with abortion bacillus infection of the womb, degeneration results, characterized by formation of cysts filled with fluid and apparently springing from the Graafian vesicles in which ova mature. Another result is failure of the "yellow body" (corpus luteum) normally to dislodge so that it becomes persistent. Sterility is also present in that condition.

From what has been said it should be apparent that mere irrigation or douching of the vagina cannot possibly suffice as treatment in sterility due to infection, nor will mere opening of the mouth of the womb suffice. To succeed in remedying the condition the veterinarian must attack it at its source; in other words, he must open the womb with special instruments and cleanse and disinfect it repeatedly until endometritis subsides or pyometra is cured. Incidentally he will have to remove a mummified fetus, if that happens to be the cause of sterility.

These treatments will not suffice if the ovaries are involved and so the veterinarian always is careful to examine the ovaries by way of the rectum and if necessary rupture cysts or remove any corpus luteum that happens to persist.

Until such expert treatment can be given, the vagina may be flushed out daily with a gallon of blood-warm, boiled water containing 2 tablespoonfuls of table salt; or with a solution of 30 grains of permanganate of potash to the gallon, if the discharges are abnormal.

Itching Skin

Last spring I purchased a mare. At first I noticed her rub the root of her tail and mane against the stall. I treated her for worms without results. Called a veterinarian who said she had mange and left a bottle of disinfectant to wash her with. I used Kreso Dip also, but no results. At present she doesn't rub her mane or tail but turns around in the stall and bites herself on the back and sides. I don't like to clip her as the weather is quite cold and my stable isn't very warm. I have given her sulphur and various other things for her blood.

New York. W. C. G.

Pin worms in the rectum are probably causing some of the irritation. To destroy them, inject into the rectum two-thirds of a pailful of warm water containing two ounces of powdered sulphate of iron (copperas). Repeat the treatment in a week, if thought necessary. Work or exercise the mare daily. If she does not work, do not feed any grain. Make carrots a part of the ration. Scrub tail and mane clean and when dry saturate roots of hair with a mixture of two ounces of flowers of sulphur, one-half ounce of coal tar dip, and one pint of cottonseed oil or sweet oil. Repeat the applications every three days. Treat other affected parts of the body in the same way. Groom daily.

Nodular Disease

Would be pleased to know the cause of lumps in the intestines of sheep. I butchered some sheep that had lumps the size of large peas on the intestines. Upon pressure they would discharge a very thick, yellowish matter. The heart, liver, lungs, and kidneys appeared normal. The sheep affected with the lumps appeared to be thrifty. Is this meat fit to eat?

Fayette, Mich. C. L.

The meat is fit for use. The nodes contain a worm known as "esophagastoma columbianum", in one stage of its existence, and constitute the disease commonly termed "knotty guts" and technically "nodular disease of the intestines". There is no remedy as the nodes are in the wall of the intestine, but the usual preventive measures against invasion of worms make them less common. The nodes rarely do any appreciable harm and are found prevalent in thousands of healthy, fat sheep slaughtered in the abattoirs of the large cities at this time of the year.

Mammitis

I am having trouble with some of my cows. I am feeding these well and they gave me 40 lbs. of milk per day, before they went this way. These cows went wrong in quarters which swell very badly and the milk becomes thick and lumpy. They do not eat very much ground feed. I am feeding ground oats and barley and two pounds of linseed meal per feed twice a day, and silage three times a day which amounts to thirty-five pounds per cow. Have also been feeding them good clover hay and corn.

Cambria, Wis. M. J. R.

Change the method of feeding. An excess of protein often induces mammitis (garget) but germ infection either starts or complicates all severe attacks. Those due to pus-forming germs usually ruin the glands for future milk production. Use a balanced ration such as has been prescribed in this paper many times or use bulletins and leaflets on the subject to be had from the State Agricultural Experiment Station at Madison. Allow a pound of concentrate mixture for each 3½ or 4 lbs. of milk yielded daily. The feed of oil meal is excessive. Treat mammitis according to instructions often given in the veterinary department of the paper.

ABORTION IN CATTLE

CAN BE TREATED SUCCESSFULLY AND YOUR COWS MADE PROMPT. REGULAR BREEDERS BY

STERILOID

STOP LOSING CALVES

TREATMENT: If STERILOID is used at the first sign of abortion the cow will go her full time and have a healthy calf. If your cows or heifers do not come in season, or fail to get with calf, use STERILOID. Cows get with calf after only one treatment. Write today for FREE BOOK. It explains the causes and symptoms of Abortion and tells how to treat Abortion, and make your cows regular, healthy breeders with STERILOID. Also contains letters from breeders who have used STERILOID successfully.

GUARANTEE: We will refund money in every case when STERILOID FAILS to make good. PRICE $1.00 plus 4c tax. Mailed Postpaid, in plain wrapper.

Illinois Agricultural Association Holds Sixth Annual Meeting

(Continued from page 60)

two-thirds of the public will provide transportation for shipping it out of the country." No sooner had President Howard placed the suggestion before the assembly than Robert N. Clarke of Stronghurst, as chairman of the grain marketing committee, mounted the platform and said, "God has been good to us. We have plenty and more. Let us market our surplus in the Relief and take our pay in love." Faster than the secretary could take the list, Whiteside county led, followed by 37 others pledging from one to five carloads each, giving a total of 43 carloads, 70,000 bushels. President Howard Leonard then read telegrams from Indiana, Missouri, and Ohio pledging those states to co-operate fully. It is now up to Hoover and the Chinese people.

Resolutions

Principal resolutions passed called for the inauguration of a comprehensive system of highway maintenance on farm to market roads and opposed the construction of only a few expensive roads benefiting tourists and pleasure seekers.

Recommending to Illinois Congressmen the passing of an appropriation for Federal railroad work of not less than one hundred million dollars per year for the two fiscal years ending June 30, 1922 and 1923 and in the present session so that the funds may be available before the adjournment of the Illinois legislature.

Rural Police Favored

Recommendations for adequate protection against criminals and violators of the law were passed.

Education Upheld

Feasible consolidation of rural school districts and an appropriation of whatever may be necessary to maintain the University of Illinois, especially the Department of Agriculture, were educational features proposed.

Patch Up the Old Binder

The manufacturers of farm machinery were scored for maintaining war prices when commodities in other lines have been reduced and the price of farm crops in some instances shows a depreciation of more than 100 per cent. It was recommended that farmers conserve on old machinery by repairing.

Endorse Co-operative Marketing

Handling the commodities of the farms in a co-operative way to distribute the foodstuffs of the nation from the producer to the consumer more efficiently, was endorsed.

Ask for Better Transportation

The transportation agencies of food products were called upon to adopt more efficient and economical handling of commodities. Conservation of power was recommended and the use of water transportation wherever practicable to reduce congestion in distribution and to lower cost thereof.

Oppose Organized Strikes

"We deplore violent labor disturbances with their attendant strikes, lock-outs, etc., with their enormous economic waste, and call upon capital and organized labor for a more sympathetic and comprehensive study of one another's labor problems with the view of settling their disputes peaceably."

Keep Up Soil Fertility

Maintaining the soil in its present state of efficiency and increasing it wherever possible was strongly urged, and attention called to the relative value of food in comparison with other commodities as contributing to the welfare, prosperity, and happiness of the people.

Even milk of human kindness, if stirred too much, turns sour.—Exchange.

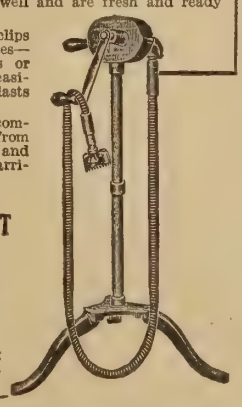
Jersey Sire—A Son of Pogis 99th. Guernsey Sire, Langwater Islander.

Clip Cows and Horses



The Stewart No. 1 Clipping Machine is a necessity in farm equipment.

Clip your dairy cows on udders and flanks as an aid to clean milk production. Clip every few weeks as long as cows are stabled. Practiced by progressive dairymen.

Clip the cows all over in the spring before turning out to pasture — gives them a healthy skin that keeps them in condition and they produce better.

Clip cows before freshening. Clip to drive out lice and ticks.

Clip your horses or mules this spring — keep them healthy for the heavy spring work. Clipped horses dry off quickly, rest well and are fresh and ready each morning.

The Stewart No. 1 clips cows, horses and mules—no change in knives or adjustments. Runs easily—strongly built—lasts a lifetime.

At your dealer's, complete, $14; or direct from us by sending $2 and paying balance on arrival.

—

Tipton, Ia.

California Cow Competition

The California Cow Competition which was begun September 1, 1920, will be run for seventeen months, closing January 31, 1922. In the first three months of the competition, 193 cows have been entered from 29 different herds. Applications are being received daily and it is hoped that a large enrollment will be made before April 1, 1921.

Seventy-seven cows have produced over 50 pounds of butterfat for one or more months. The highest production was that by a grade Shorthorn owned by Earl Graham, the production being 2,099 pounds milk, 113.3 pounds fat. A pure-bred Holstein and a grade have each produced over 100 pounds of fat in a month. In November 100 cows exceeded 50 pounds fat, 92 produced an average of 54.06 pounds fat in October, and 43 produced an average of 56.63 pounds in September.

A Bull Sale of Genuine Quality

At WATERTOWN, WIS.

Tuesday, February 1st

50 Serviceable Bulls

Among them you will find 29 grandsons of King of the Pontiacs, a bull from a 27-lb. four-year-old sired by a 33-lb. son of King of the Sadie Vales, another from a 22-lb. two-year-old (this dam now on test going at a 30-lb. gait), a son of a 25-lb. 4-year-old, second dam 27 lbs., a son of a 25-lb. 3-year-old, a son of a 75-lb. yearly record cow, sired by Woodcrest Clyde, 33 lbs. You will also find bulls from good record dams sired by the following sires: Finderne Fayne Holingen Valdessa, who is by King Valdessa, 40 lbs., and from a 37-lb. dam with 1,395 lbs. butter in a year from 24,612 lbs. milk; King Agatha Pontiac Lass, a 30-lb. grandson of K. P. Pontiac Lass, 44 lbs.; King Canary Oak De Kol, a 34-lb. grandson of Canary Paul Fobes Homestead; Carnation Segis McKinley, a 30-lb. son of Johanna McKinley Segis; King Segis Champion Rue, a 30-lb. son of King Segis Champion Alcartra Ormsby Oak Homestead, a 32-lb. grandson of Canary Paul Fobes Homestead.

As the above indicates we have assembled a class of bulls that will tend to create value in the herds to which they are introduced.

We have bulls that will interest discriminating pure-bred men and that will appeal to men with grade herds. This Sale was prompted by a desire to facilitate the tedious and difficult task of procuring a satisfactory herd sire. We have fifty—one will suit you. You make the price.

All bulls tuberculin tested. Catalogs at Sale.

Minneapolis, Minnesota.
"The Home o the Ormsbys."

Grandsons of "Count" and "Piebe"

I have just purchased from the University of Nebraska, which owns the highest record son of PIEBE from BEAUTY GIRL PONTIAC SEGIS, the World's Record Daughter of COUNT,

Eight Young Bulls

from six to eighteen months old, all from good A. R. O. dams. Individuality faultless. Beautifully marked.

Most Popular Combination of Breeding of the Day

They Won't Last Long — **Write Me At Once For Prices**

J. M. HACKNEY

ARDEN FARMS, 602 Merchants Bank Bldg., St. Paul, Minn.

We Still Have

two sons of King Segis Pontiac Fayne Star that are ready for service. They are real ones. Let us mail you a bull circular. Won't cost you a cent and we like to do it.

Flecks Farm, Faribault, Minn.

THE LASHBROOK HERD

Offers A High-Class Bull

ELMWOOD MARIE NETHERLAND

Ten months old, sired by SIR WALKER SEGIS HOMESTEAD, a son of "PIEBE" and "Beauty Beets Walker Segis" world's greatest heifer, with two yearly records over 25,000 lbs. milk and 1,000 lbs. butter.

Dam, an 18-lb. junior two-year-old heifer, of rich A. R. O. breeding. Soon to freshen as senior two-year-old and go on yearly test. Will double value of bull in short time. He is evenly marked, a good, typy bull and a bargain for $500.

Send for pedigree and photo.

A. J. Lashbrook, Northfield, Minn.
Federal Accredited Herd

Lola Segis Pontiac Homestead

the highest record bull in southern Minnesota, heads our herd. His sire, Piebe Laura Ollie Homestead King, has more daughters that as 2-yr.-olds have produced 20,000 lbs. milk in a year than any other. His dam, a 34-lb. 4-year-old daughter of King Segis Pontiac Count, has 3 records averaging 33 lbs. and has made over 1,000 lbs. in 1 year. We have a few serviceable bulls and younger from A. R. O. dams for sale.

Clover Lea Farm, W. W. Walker, Owner. Austin, Minnesota

Grandsons of Sir Pietertje Ormsby Mercedes

The sire is Sir Pietertje Ormsby Mercedes 22d, a son of Minnesota's first 1000-lb. cow. These bulls are all nicely marked, straight top lines. Very good individuals from good A. R. O. dams.

For pedigrees and prices, write

BELGIAN MELOTTE

IMPORTED

NO MONEY DOWN!

We don't want your money until we have pr ven to you that the Melotte is the best separator on the market. We don't want you to sign any papers. No money down, no deposit, no guarantee, no formalities. Please understand that you are under no obligation. We make this liberal offer because we know a test will convince you. Send the coupon now for full details.

Thirty Days' FREE Trial

In order to convince you quickly that the Belgian Imported Melotte is, by far, the best cream separator that it is possible for you to buy anywhere in the world—we will send one direct to your farm on a 30-day absolute and unconditional Free Trial. Use it for 30 days just as if it were your own machine. Put it to every possible test that you can think of. Compare it with any or all others. See how easily the Melotte is kept clean and sanitary—how much easier it is to operate. After you have tried it 30 days and you know it is the separator you want to buy, pay $7.50 down and the balance in small monthly payments as low as

$7.50 Per Month

You alone are to judge. All we ask is that you don't buy any separator until you have seen and used the Melotte. Remember, you pay nothing down until you test the separator to your entire satisfaction. Then pay $7.50 as first payment and small monthly payments as low as $7.50 until the separator is paid for. We give you 30 days' free trial to convince you that the Belgian Imported Melotte will give you more cream and bigger profits—that it is more sanitary and easier to clean — that it turns easier and will stand more wear than any other separator on the market.

The Rock-Bottom Price

You can now get the Belgian Imported Melotte at the very lowest "Rock-Bottom Price". The same price that the thrifty farmers of Belgium pay. You pay only $1.75 more than it would cost you if you bought it at the factory in Belgium. This $1.75 is to pay the water-freight. Take advantage of this opportunity while it lasts. Test the wonderful Self Balancing Bowl. See why *this* bowl cannot get out of balance—cannot remix cream with milk. Then send your skim milk to the creamery. *Let them* prove that it skims cleaner than any other separator.

Our 15-Year Guarantee

Every Belgian Imported Melotte Cream Separator is sold on an absolute, iron-bound, 15-year guarantee. No Melotte Separator is ever sold except under this guarantee. A guarantee written in plain English so that you can understand it. A guarantee that is ***100% stronger than any other separator guarantee made.*** A guarantee that really guarantees something—upon which you can absolutely rely—an absolute protection to the purchaser. Write us today. Let us send you this iron-bound guarantee and the full details of the Great Special Offer that we will make to you. Mail the coupon today.

What More Can We Offer?

What can we offer that we haven't offered? What do you want that we haven't mentioned? If there is anything we haven't mentioned, write and tell us. We will go the limit. We will do anything you say within reason. We will put our separator in competition with any separator in the world. We have the best—why should we be afraid to put in competition. If the other manufacturers haven't confidence enough in their separator to give you a 30-day free trial without deposit or bank guarantee, ask them what they are afraid of. You are entitled to this offer. Insist upon it. For our part, if the Melotte doesn't stand every test, we certainly don't ask or want you to buy it. We want the Melotte to be sold ***on its merits alone.*** So don't hesitate a minute. Mail coupon TODAY!

Save $10.00

We have just received a large cargo of Melotte Separators and when remitting to Belgium, the exchange was so favorable that we were able to save $10.00 per Separator.

We are giving this to you as long as the cargo lasts. This is your gain if you take advantage of it at once. But you must act at once in order to save $10.00.

THE MELOTTE SEPARATOR H. B. BABSON, *U. S. Manager*
2843 West 19th Street, Dept. 9851 Chicago, Illinois

Without cost to me or obligation in any way, please send me the Melotte Catalog which tells the full story of this wonderful separator and M. Jules Melotte, its inventor.

Name.....

Address.....

Post Office.....*State*.....

Send This Coupon!

Fill out and mail the coupon for new Melotte catalog containing full description of this wonderful cream separator and the story of M. Jules Melotte its inventor. Don't buy *any* separator until you have found out all you can about the Melotte and details of our 15-year guarantee. Sending this coupon does not place you under any obligation whatsoever. It brings you new Melotte catalog and full description and details of our Great Special Offer. Don't do another thing today until you have mailed coupon.

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Fort Atkinson, Wisconsin Volume LXI, No. 3 February 4, 1921

First in the Fields

Cletrac Farmers A Week Ahead In Spring

CLETRAC farmers are first in the fields every year. Even a late wet Spring doesn't worry them—their Cletracs get right into the fields and start the work a week ahead of their neighbors.

Cletrac's tank-type tracks ride easily over the soft, wet ground. They do not dig in or mire in the soggy spots. Cletrac jumps right into its fast, steady pace the first day out and keeps going.

With a Cletrac it's easy to get the plowing and fitting done in time for those few days when conditions are just right for planting.

"*Selecting Your Tractor*" tells you all about this and why Cletrac reduces the cost of raising farm produce. Send for a copy and see your local Cletrac dealer.

HARD THIS WAY, BUT—

EASY ON A TRACK THE CLETRAC WAY

SPECIFICATIONS

Horsepower: 12 at drawbar, 20 at belt-pulley.
Length: 96 inches.
Width: 50 inches.
Height: 52 inches.
Weight: 3420 pounds.
Turning Circle: 12 feet.
Traction Surface: About 800 square inches.
Center to Center of Tracks: 38 inches.
Belt Pulley: Diameter 8 in., face 6 inches.

TANK-TYPE TRACTOR

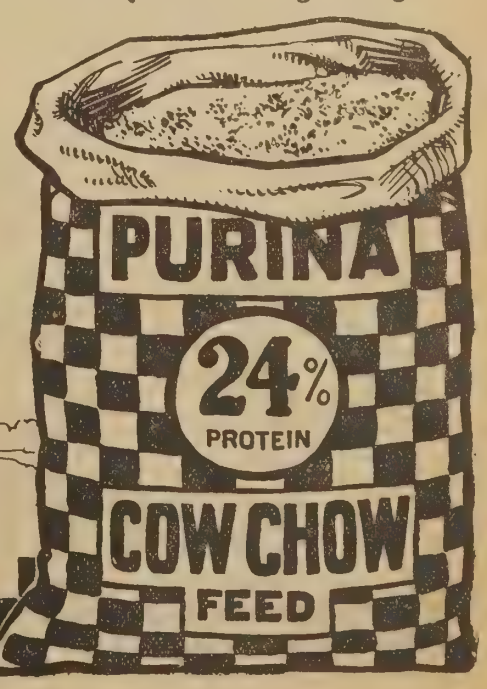
Hold Back anything needed Here

and it shows Here

A COW can give milk to her fullest capacity only when fed the right proportion or balance of milk-making materials. Milk is made up of protein, carbohydrates, fat, minerals and water, in proportions that practically speaking can't be varied. Instead of making imperfect milk, a poorly fed cow gives less milk.

Cows seldom get enough protein or enough calcium

For that reason, a large part of the roughage and home-grown grains is often wasted. You have to give your cows twice as much grain feeds as when you feed Purina Cow Chow.



Feed your corn, oats and barley with

Purina Cow Chow

While grains are too low in protein to be valuable milk producers, with the addition of Purina Cow Chow, these grains will be balanced with the right amount of protein—and what is more important, the *right kind* of protein.

Put Purina Cow Chow to the test, and your milk scales will give you the best of reasons for continuing it, no matter what the price of home-grown feed. "A B C of Milk Making" shows how to balance home-grown rations—get it free.

Purina Cow Chow

5 CENTS a day invested in a DE LAVAL may save you from 25 cents to $1.00 a day

A DE LAVAL Cream Separator is the best paying investment any cow owner can possibly make.

It saves twice a day, 730 times a year, over any other system or inferior separator—in quantity and quality of product, time and labor.

Its cost represents an investment of about 5 cents a day for ten years, including cost of operation and interest on the investment. With simple care it will give good service not only for 10 but for 20 to 30 years; it practically never wears out.

Such an investment may save you from 25 cents to $1.00 or more a day, according to the number of cows, returning from 500% to 2000% profit on the investment. Every day you delay the purchase of a De Laval you waste and lose money.

Today a De Laval Cream Separator, considering its improvements and quality of construction, is one of the cheapest things you can buy. With cheaper feeds and butter-fat at present prices there is more profit today in butter-fat than there was a year ago. Relatively, a De Laval is cheaper than it was a year ago.

See your nearest De Laval agent now about getting a new De Laval. Even though you have only one good cow, it will pay you to own one.

Sooner or later you will use a De Laval Cream Separator or Milker

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Volume LXI — FORT ATKINSON, WIS., FEBRUARY 4, 1921 — Number 3

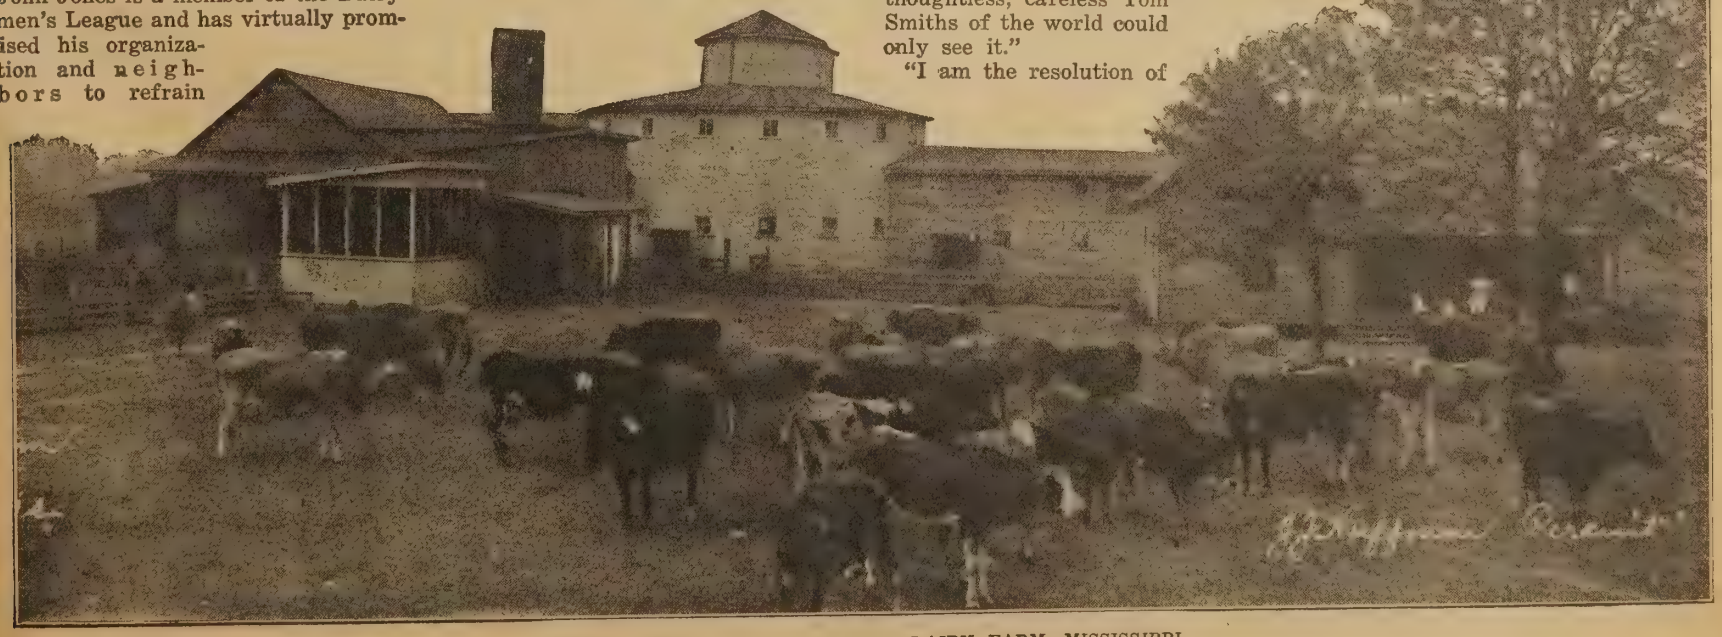
WHAT MIGHT HAVE BEEN

Mrs. Willcox paints a vivid picture of a final meeting of 1921 New Year Resolutions, as they pass out, broken and unkept. They come together, tell the story of their short lives, and depart, to await the annual resolution revival at the beginning of another year. Perhaps some of your own resolutions, made only a month ago, attended this strange gathering.

HELEN S. K. WILLCOX, NEW YORK

IT was many days after the making of 1921 good resolutions that a company of elusive, ethereal ghosts gathered together one cold winter's night to talk about that most interesting subject to either man or shade—himself. An old-appearing, decrepit shadow advanced to the center of the ring and addressed his fellows thus, "It is a pity, indeed," he began quaveringly, "that fine, upstanding resolutions, such as we were on the first day of January, should have degenerated into nothing but careless memories and ghosts of what we had promised to become. But down through the ages it is ever so. At the beginning of the year, man determines to turn over a new leaf and attend to his rightful commissions thereafter instead of adding to his omissions. He fully intends to live up to his fresh standard, but alas! alas! We who are gathered here are touching examples of the already broken, forgotten resolutions of young 1921. But enough of such pessimism! We must on to our business, which is for each broken resolution, once a new, good resolution, to describe himself, tell how and why he was broken, and then fade away forevermore. Tell us, Dairyman John Jones' resolution, why you are with us tonight instead of now fulfilling your destiny."

The resolution who arose at this bidding was originally a tall, impressive figure who had now become bowed down and shrunken to a caricature of himself. "I am the renouncing-oleo resolution," murmured this ghost with a tired, weary sigh, "but John Jones only kept me for a week. The next time he went down to the store his cupidity overcame his loyalty to his own product and his fellow dairymen, consequently he returned with ten pounds of substitute, and he and his family have eaten it ever since. The grave pity of it is that John Jones is a member of the Dairymen's League and has virtually promised his organization and neighbors to refrain from betraying them in this fashion, even to seemingly save a few pennies a pound. Do you wonder that I am glad to get his disgrace and his weakness off my mind when you stop to think that I represent many thousand similar broken resolutions where farmers today still insist on conducting their business on a Dr. Jekel and Mr. Hyde basis, insisting on enjoying the power and protection of their organizations, while at the same time they knife them in the back by supporting that industry's most insidious enemy, the butter substitutes? I am thankful to fade away, friends, but my last prayer is that such men as John Jones, who created me only to break me, shall some day see the error of their ways or, better, feel their errors in a financial way, the only way such men can be reached. I bid you all a sad adieu!" With which words the renouncing-oleo resolution vanished into oblivion.



"I am the broken pool-signing resolution," sighed another shade sorrowfully. "Will Brown and many thousands of others like him said they would agree to sign the proposed pool in January, advocated by all friends and leaders of the great Dairymen's League. They had put it off for many reasons: prejudice, ignorance, unfounded fear of the untried, but Will Brown and his big company resolved to sign me and keep me at the beginning of 1921. But when January arrived these doubters and conscientious objectors and progress-hamperers again refused to make the pool a fact. Dairymen in the eastern states are losing millions of dollars and undreamed-of power and efficiency because they are unsupported by the whole organization. Some day I shall be revived, perhaps, and will then be the means of happily adjusting the now demoralized dairy world. But not until the twenty-five thousand Will Browns can have more faith and courage. I, too, must depart until men have a greater vision. Good bye, friends!" and he was gone.

"I am Tom Smith's resolution," spoke another ghost gloomily, "and I represent the thousands of broken promises of farmers who were going to put their machinery under cover from the elements this winter—but all of whom have as yet failed to keep their promises. If Tom Smith alone had carelessly forgotten to keep faith with himself and his long-suffering machinery, his deflection would not have amounted to much, but when you multiply him by thousands upon thousands of farmers who can least afford to take losses caused by the breakdown of their tools from such treatment, then my passing is vastly important to the whole world. I represent much wealth lost and misused; many faithful, inanimate things thrown out long before their time from lack of proper protection and because of almost criminal exposure. I know that, as a resolution, I am not as important and necessary as those who have spoken first, yet you must admit that it would have been far, far better to have kept me — if the thoughtless, careless Tom Smiths of the world could only see it."

"I am the resolution of Dave Green," now came a whispering voice timidly, "and I was made with the idea of making farm work and life a little easier for Mrs. Dave Green. Dave said that this year he certainly was going to lay a new kitchen floor over the old splintery, wide-cracked one. He was going to put running water in the house, too—he has it in the barn, you know. And he was going to build an inside toilet and get the wife a washing machine and a lot of little, inexpensive, labor-saving devices. Dave could afford it. He isn't poor by any means and his barns and stock are among the best in the country. But my being here at our too early post mortem shows that Dave couldn't live up to his good resolution. His wife is patiently waiting for some of the promised changes to take place, but she doesn't know Dave as well as I do. Dave fathered my ancestors for years back—and not one of them, where the house is concerned, ever lived and became a fact instead of a resolution. Mrs. Dave will not get her just dues in 1921."

"I am Bill Barr's resolution," began another with ill-concealed grief. "I represent the thousands of herds in the country which were to have been improved by a pure-bred sire or the introduction of a registered female or two into now profitless dairies. All the Bill Barrs said that they certainly would not put off the good work another year, but, like Dave Green, one excuse serves as well as the next to the born procrastinator and I already know my fate as surely as if all of 1921 had rolled past. The worthless

JERSEY HERD ON B. T. CLARK'S DAIRY FARM, MISSISSIPPI

A BILLION FOR HIGHWAYS

H. COLIN CAMPBELL, ILLINOIS

BEFORE this article gets in the form of printed page no doubt the more than $1,000,000,000 of road money that has been available in the United States for some time will have jumped to about a round billion and a quarter. Even should that surmise not prove true, it will still remain a fact that never before in the history of any country have such huge funds been awaiting transferences from state, county, or other treasuries into modern highways.

And we forget so soon in the rush of things in this counrty, that it seems almost incredible that only seven or eight years have elapsed since organized propaganda for permanent highways began to take root in this country. About that time Vermilion County, Illinois, was agitating and soon after stepped out in the limelight with complete plans and the funds for a county system of about 150 miles of permanent roads. Other communities have since eclipsed Vermilion County in the funds raised for similar purposes, and in a number of cases in the actual mileage of concrete or other paved roads actually open to traffic at the present time. And while we may have forgotten, the fact remains that Vermilion County has gone down into history by proving that permanent roads can be made a reality, and the way to do it is to raise the money necessary and then stop talking about roads and build them.

All along the once almost impassable highways in Vermilion County are the most modern farm homes on the most modern farms. These have been the result of the paved roads, which have made marketing a matter of disregard for miles, weather, and season, because every day is just the same to the concrete road.

So much for a little bit of road history. Types of construction are still being discussed, but the advantages of permanent highways have ceased to be a matter of argument. The factor that has had the most to do with this change is the motor vehicle, whether pleasure or car truck, and the number of these registered in the country has several times doubled in the last ten years. Nearly 8,000,000 trucks and pleasure cars are now hammering at the roads in the United States.

Since our rural roads have profited from improvement, the farmer has become the heaviest purchaser of motor vehicles, for with paved highways under and ahead of them, distance of the market means nothing if the road is perfect all the way. In fact, he may not have to go to market for the cities, as well as the rural districts, are packed with motor cars and the pleasure seeker in his touring car combines a quest for fresh eggs, dairy produce, and vegetables with every out-of-town trip. This is the reason why along many of our paved highways we see the wayside marketing stands and city consumers bargaining with country producers.

Just as argument for and against the advantages of good roads has stopped, so has argument for and against the immediate benefits that might be expected from them stopped also. The farmer knows now that after the day's work he can take out the car and get the family into town in time to see the movies and back home to bed as early as he wishes.

FROM COAST TO COAST. A CONCRETE HIGHWAY IN WEST VIRGINIA AND A LIKE HIGHWAY IN OREGON

Educational advantages, often claimed and often doubted as possible, are now evident in the consolidated schools that have followed paved county road systems. Children go to school every day, regardless of season or weather, because the consolidated school bus stops at every farm doorway and picks them up. Practically all of the former one-room district schools in many counties throughout the United States have been abolished and instead there has been built a graded consolidated school with educational facilities comparable to the best that only the larger cities heretofore could offer.

Much to the disappointment of many communities, road building, even where funds have been available for several years, has been seriously hindered by the war and the many disturbing conditions which have followed. The principal of these has been the undependability and insufficiency of rail transportation necessary to move the required materials. It is for that reason that a very large portion of the nearly 100,000,000 square yards of concrete pavements that have been placed under contract during the past two years have lagged toward completion. Yet even in the face of this fact, accomplishments have been wonderful and the value of the roads that have been finished is so well proved that everyone has been hopeful and is patiently waiting for his road. It is likely that the volume of construction that next year will witness will stand without parallel.

One of the simplest ways that has been worked out within the past three or four years to take care of the cost of extensive improved highway systems has been to allot revenues received from motor vehicle license fees to the cost of road construction and maintenance. Even the increased fees that have been made necessary where this practice has been adopted or is at the present time proposed, are so little that they are only a small percentage of the amount that it has been positively proved paved highways save in reducing the gasoline consumption of motor vehicles over good distances. One gallon of gasoline goes twice as far on the concrete road as on the best earth road. Anyone can do his own figuring as to the profit derived from this source, for gasoline is no longer cheap. Other savings, difficult to compute but none the less real, no doubt exceed in the aggregate the amount represented by gasoline saved. Certainly on the even, dustless, paved surface there is less wear and tear to any kind of vehicle, and tires as well as mechanical parts must have much longer life.

Wisconsin, the home of Hoard's Dairyman, has more than 500 miles of concrete roads, and in many places in the state this type is built to the exclusion of all others. For instance, no so-called permanent road improvement other than concrete pavement is laid in Milwaukee County. In 1919 all road contracts for permanent paving that were let in Wisconsin were for concrete.

But since our readers might be skeptical as to whether what Wisconsin does would be a good thing for them to do, it might be well to cite an example or two as to the experience of some other state or locality. They have lots of concrete roads in Indiana, and everywhere along one of these modern stretches, if time is taken to chat with farmers or small town merchants, the sentiment will be found unanimous for the paved highway.

On a recent trip to Indiana, I took occasion to question bankers, farmers, merchants, and even a lawyer as to what benefits in their opinion had come from their concrete roads. The banker, of course, is likely to be a safe person to counsel with on the subject of investments, and everywhere that concrete roads have been built, this type of construction is looked upon as an investment because of its proved earning power in the form of time and gasoline saving.

The president of one of the largest banks in Wayne County, Ind., attributes a great deal of the increase of business his bank has enjoyed to the highly improved roads radiating from the county seat. He says that the bank has increased its number of customers because of the better highway transportation facilities. Also the area from which their banking patronage is drawn has increased in accordance with the radius of good roads. In his opinion, farm lands in the county have increased on an average of $25 to $40 an acre, and this particular amount of increase extends back from the road one mile on each side. In other words, the paving has increased the wealth of the land immediately adjoining the roads, $32,000 a mile; but farmers back from the concrete highway as far as five miles have felt that their land has been given added value. Real estate men confirm this.

One farmer interviewed puts it this way: "If we don't like the markets at our nearest town, we simply drive on to another one and look for a market that does suit us. Time is one of the least of our troubles now. Very often we ship our stock by truck to Indianapolis, sixty miles away, and get good returns for sending it that way, particularly because of the condition of the roads. Shrinkage is less and the rural telephone gives us the market tips which the roads enable us to take immediate advantage of. There is no such thing as missing the most favorable market conditions."

Another said: "Farmers did not count their own time a few years ago. It used to be that corn was 25 cents a bushel and hogs $3 a hundred. It used to be that $15 a month would hire a good hand and John D. used to sell gasoline for 5 cents a gallon. Land used to be worth $50 an acre but those old, easy going days are only a dream now. If you get the money out of a farm nowadays you have got to move," and suiting the action to the word he let in his

ONE OF NEW YORK'S PERMANENT HIGHWAYS

(Continued on page 94)

Orchards, Hay, and Cows

F. L. BALLARD, OREGON

ONE of the most productive districts in the Northwest is that portion of the Snake River Valley including the counties of Payette and Washington in Idaho and Malheur on the Oregon side of the Snake river. Six to eight tons of alfalfa hay are ordinary yields there, six tons being near the average yield, while yields of ten tons are sometimes secured. Corn yields fifteen and frequently twenty tons of ensilage per acre. Unlike many parts of the Northwest, the big eastern types of corn can be grown successfully in the Snake River Valley. There are fields of sunflowers being grown for ensilage which conservative estimates place at thirty-five to forty tons.

Yet in this entire area, difficult to equal in forage production, there is comparatively little live stock. Raising hay for range cattle and sheep, together with considerable attention to the development of the fruit industry, has retarded rapid increase in numbers of farm live stock. Lower prices this year for hay, however, coupled with the excellent market for butterfat, afforded by the Farmers' Co-operative Creamery of Payette, has turned the attention of the farmers to the possibilities of more live stock and the dairy industry seems on the whole the most promising for the district and is attracting most attention. This is partially because of the success of those who have been entering that line of farming during the past few seasons.

In order to promote interest in more live stock, the farm bureau officials in the counties above mentioned recently joined in plans for a joint tour of the district to visit successful live stock breeders and to lay the groundwork for future live stock improvement plans. The excursion was attended by 300 farmers and farmers' wives. Visits were made to the Sargent Jersey herd of Payette, the Yager Shorthorn herd also in Payette, the Holstein herd at the Weiser, Idaho, Technical Institute, the Rambouillet breeding plant of A. G. Butterfield of Weiser, and the farm flocks of Frank Northrup in Malheur County. A stop was also made to look over one of the four registered Jersey bulls owned by the Payette Bull Association. This association comprises four blocks which now own four excellent bulls from the Dickson herd at Shedd, Oregon.

A picnic was held at Oregon Trail Park in Weiser and addresses were made by live stock chairmen of the three farm bureaus and by representatives of the Oregon Agricultural College and the University of Idaho.

Interest in dairying and the farm flock, in combination, proved most highly developed. A large number of farmers in the Payette section, formerly devoting their entire time to fruit raising, now keep a few dairy cows to consume the alfalfa raised in the orchards and properly to diversify their business. They have been so successful that the diversification idea is spreading. Hay growers are also finding that it pays them to produce butterfat rather than to sell their hay.

An important factor in dairy development in this district is the co-operative creamery previously mentioned. This creamery started business in 1916 with a single employee, now employs sixteen persons, operates in a $16,000 modern plant, and nearly doubles its business this year. It has always paid dividends, acquired a sinking fund, and has for the past three years paid an average of four cents a pound above any other available market to Payette farmers for their butterfat.

The creamery is also active in assisting in live stock improvement. Under its direction several carloads of good grade Jerseys from the Willamette Valley, Oregon, have been brought to the county.

H. Gregory of Payette has been president of the creamery since its organization and J. R. Brown, formerly a student at the Oregon Agricultural College, has been manager from the start.

ALFALFA IS GROWN IN THE ORCHARDS IN THE SNAKE RIVER VALLEY

THREE FULL CROPS OF ALFALFA ARE CUT EACH YEAR IN THE SNAKE RIVER VALLEY, WITH AN AVERAGE YIELD OF SIX TONS PER ACRE

THE HUMAN SIDE OF COW TESTING

Horace Evans, Tester for the Plainfield Association, Tells His Former College Roommate How Stanley Miller Won Out

September 20.

DEAR MIKE:—Doubtless you have heard many times that every dog has his day. To this I should like to add that every man has his story; at least, it is a dull life that has no story. The truth in this observation is being driven home to me every day, and were I to single out the one best thing about the cow tester's job it would be the opportunity that it affords for becoming closely acquainted with farmers in their own homes, and to learn the interesting stories of their lives. These stories do not come easily and are not for the ears of everyone. The cow tester, however, if he but gains the confidence of the farmer, is in an excellent position to obtain them. The privilege of doing so is among the richest rewards of his job.

I do not wish to pose as a philosopher, Mike, but the foregoing got into my system, I think, because of a talk which I had with Stanley Miller last night. It was my third visit to Stanley's farm and, while I had set him down as perhaps the most progressive of the younger members of the association, our relations had not before reached the point where an exchange of life experiences was fitting. Last night, however, he seemed in a reflective mood and, seeing that I was eager to listen, related the story of his life. Probably it appealed to me particularly because, as you will see, his experience coincides in a small way with mine, and because it contained numerous suggestions that I hope I may have the courage to take to heart. As there may be something in it of interest and possible use to you also, I am going to pass the story on.

Stanley is a genuine back-to-the-lander; one of the kind that is showing that this particular species of migration can be successful. He was born and raised in Chicago and scarcely knew what a farm looked like until about five years ago. When the age at which you and I started to agricultural college, he began a longer course as a clerk in a small mail order house. He worked there six years. At last, however, he grew tired of handling farmers' orders for things that appeared to him as luxuries, and which it seemed he never would be able to buy. The spirit of restlessness grew stronger in him until finally he resolved to become a farmer.

In handling the numerous orders that came his way during those six years, he saw more than figures and the names of articles of merchandise. He took a great deal of interest in determining, by the kind of things ordered, what kind of farming the customer was doing. He knew that when a man bought a separator and a few milk pails the chances were reasonably good that he was in the dairy business. Likewise he noticed that the orders received from a certain district were indicative, in a general way, of the kind of farming carried on in that section, whether dairying, truck gardening, or grain raising. What was more important, however, was that about the time he was becoming deeply interested in farming he began to notice that the orders from the dairy districts came in more regularly the year 'round than from anywhere else; from which he deduced that dairymen have a more regular income than other farmers and that their buying capacity is usually greater. That settled Stanley; if he

This herd is strong in type and liberal in its production. Every cow has an Advanced Registry record and the herd is accredited federally as free from tuberculosis.

Washington, D. C., Weekly News

[SPECIAL TO HOARD'S DAIRYMAN]

Washington, Jan. 24—A letter addressed by Attorney General A. Mitchell Palmer, to Secretary of the Treasury David F. Houston and dated December 31, on the subject of adulterated butter, came to public attention in some unknown way on January 19th. This is the much discussed opinion which holds that butter made of "neutralized" cream is adulterated, and subject to the ten cent a pound internal revenue tax, under the statute of May 9, 1902, and reads as follows:

Dec. 31, 1920.

Dear Mr. Secretary:

Further replying to your letter of October 11, 1920, in which you request my opinion on, and answers to, the following questions:

(1) Is a grade of butter produced from decomposed or rancid cream, which has been neutralized with chemicals before churning, adulterated butter within the meaning of Section 4, Act of May 9, 1902, and, therefore, taxable as such? and,

(2) Is a grade of butter produced from cream which is high in acid and has a bad odor, and which has been neutralized with chemicals before churning, adulterated butter within the meaning of Section 4, Act of May 9, 1902, and, therefore, taxable as such?

I have the honor to advise that under the definitions of "butter", "adulterated butter", and "process or renovated butter", the grade of butter produced as described in each of the two methods presented in the question is "adulterated butter" taxable as such.

"Butter" is described in Section 1 of the act of August 2, 1886, 24 Stat., 209, known as the oleomargarine act, as follows:

The word "butter" shall be understood to mean the food product usually known as butter, and which is made exclusively from milk or cream, or both, with or without common salt, and with or without additional coloring matter.

The Act of May 9, 1902, 32 Stat., 194, reads:

"Adulterated butter" is hereby defined to mean a grade of butter produced by mixing, re-working, re-churning any milk or cream, refining or in any way producing uniform, purified, or improved product from different lots or parcels of melted butter or butterfat, in which any acid, alkali, chemical, or any substance whatever is introduced or used for the purpose or with the effect of deodorizing or removing therefrom rancidity, or any butter or butterfat with which there is mixed any substance foreign to butter as herein defined, with intent or effect of cheapening in cost the product, or any butter in the manufacture or manipulation of which any process or material is used with intent or effect of causing the absorption or abnormal activities of water, milk, or cream; and then continues:

"Process butter" or "renovated butter" is hereby defined to mean butter which has been subjected to any process by which it is melted, clarified, and made to resemble genuine butter, always excepting "adulterated butter" as defined by this act.

The act of June 30, 1904, 34 Stat. 94, known as the Food and Drugs Act provides:

Section 7. That for the purpose of this act, an article shall be deemed to be adulterated in the case of food if it consists in whole or in part of a filthy, decomposed or putrid animal or vegetable substance.

However, assuming that butter is being legally manufactured and sold, the sole question is whether it should be taxed as adulterated butter or as process butter.

It cannot be considered "butter" as it is not made "exclusively from milk or cream, or both, with or without common salt, and with or without additional coloring matter." It is not process or renovated butter, as, under the decision in the case of District of Columbia vs. Coburn, 35 App. D. C., 324, process butter is defined as being:

Produced from rancid or adulterated butter by melting such butter, removing the curd, brine, and scum, blowing air through the butterfat remaining, and then churning the melted fat with an admixture of milk. The mixture is then chilled, ripened, worked and salted.

I conclude, therefore, that Congress intended to include such butter within the definition of "adulterated butter" under Section 4, of the Act of 1902, ante, since it appears to be a purified or improved butter which is the result of processes during which substances have been introduced and used for the purpose and with the effect of deodorizing, and removing rancidity.

Respectfully,
Signed, A. MITCHELL PALMER,
Attorney General.

This ruling is now in the hands of Commissioner of Internal Revenue M. W. Williams, former solicitor for the Department of Agriculture, to be enforced. The ruling was not given publicity in any recognized or official way, but the story "leaked" in some way and was printed on Jan. 19, in a sensational Washington newspaper. At about the same time certain oleomargarine manufacturers secured part or all of the information, and began using it in a campaign of propaganda designed to increase the sale of oleomargarine. Copies of circulars of this kind have been received in Washington.

The Ways and Means Committee reached dairy products in their tariff hearings on Monday, Jan. 24. A part of the forenoon and most of the afternoon session of the committee was devoted to these schedules.

President Campbell, representing the milk producers, made the formal argument for protection for the entire industry, and filed a brief in which he asked for the following schedule of tariff rates to be used as the minimum demands of the entire national dairy industry:

Fresh milk, six cents a gallon.
Cream, 20% ad valorem.
Condensed milk, 4 cents a pound.
Evaporated milk, 3 cents a pound.
Powdered milk, whole, 6 cents a pound.
Powdered milk, skim, 3 cents a pound.
Cheese, eight cents a pound.
Butter, ten cents a pound.

Mr. Campbell's statement and brief was a carefully prepared summary of conditions in the dairy industry in general, tracing the results of the post-war business depression, with special attention to the effect of the large imports of butter, and the smaller, but threatening imports of milk, cream, and milk products. In his brief he showed the relative cost of production in the most seriously competing countries, and the low freight rates which makes it possible to lay down foreign dairy products in New York, Boston, or Philadelphia, with less cost for packages, freight, and other transportation charges than must be paid for middle western products.

Mr. Gearon, representing the New York Mercantile Exchange, explained that that organization had adopted a resolution setting six cents as their belief, but admitted that this was based entirely on the difference in price levels in New York at the time between Danish and domestic butter.

Professor Warren of Cornell University, who is mentioned as the probable head of the proposed department of statistics of the American Farm Bureau Federation, was a strong witness heard at some length by the committee for general agricultural tariff protection. His argument was based in studies in European purchasing power, which he said indicated that for some years to come Europe could not buy from her own great agricultural areas or from the rest of the world, hence those products must seek American markets, and would do at any price which they would bring here. Because of this, he held, a tariff must be enacted or else American agriculture would suffer from such competition as never before existed.

The Packer control bill passed the Senate late Monday afternoon by a vote of 46 to 33. This ends twelve years of contest on this measure in the Senate. The bill now goes to the House, where there is about one chance in a hundred that it will get consideration before the end of the session.

Waukesha Holstein Breeders in 14th Winter Meeting

The Waukesha County, Wis., Holstein-Friesian Breeders' Association held its fourteenth annual winter meeting January 21. About three hundred members and friends attended the business meeting and program and banqueted together at the noon hour.

W. L. Baird, secretary and treasurer, reported the work of the association for the year ended. He listed a total of $1,233.37 as receipts and $1,119.28 as expenses, which leaves $114.09 on hand. In 1920 the private sales made through the association amounted to $94,541. Five public sales were held in which cattle sold for $156,256.15.

G. R. Rice, secretary of the Milwaukee Milk Producers' Association, spoke on the work of that organization. He showed the advantages to producers which come in marketing co-operatively and explained the operation of his association in selling its members' milk to Milwaukee distributors. He reviewed the changes which have been made in handling milk in that city which have benefited the producer.

F. T. Price of the Holstein-Friesian World discussed the topic, "Advertising Needs of the Present". He emphasized the fact that the present is a buyer's market and not a seller's—that the breeder who disposes of his surplus to advantage must now be a salesman—not simply an order-taker. He said: "The market today requires a different type of advertising copy. Copy is of utmost importance. It creates the desire in the prospective purchaser's mind for more information on the product advertised. It requires a follow-up system in order to obtain results. The advertising situation for the past few years has been simplified to a considerable extent by the condition of the market. There was an exceptional demand and mere announcements made the sales. Today the buyer's desires must be aroused, salesmanship must be employed, arguments advanced as to why the buyer should purchase. Before, the reason lay with him. He wanted the animals. Today, the reason must be made clear by copy."

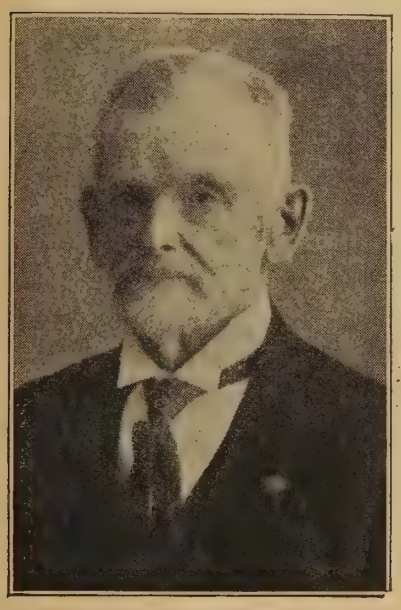
A. J. Glover, editor of Hoard's Dairyman, called upon the breeders to give more attention to the art of producing superior animals and less to selling for high prices. He showed the harm which is done in the sale of diseased and inferior cattle and the benefits resulting from the sale of good cattle, especially to beginners. He pointed out the fallacy of attempting to set prices on the basis of cost of production and outlined a system of co-operative marketing through farmer owned plants. The buyer is not at fault, he said, when he takes the farmer's product at the lowest price he can make; it is up to the farmer to protect himself by providing plants for handling his output so he can secure the best price the marketing conditions will permit.

L. L. Oldham, secretary of the Wisconsin Holstein-Friesian Breeders' Association, spoke briefly of the work of that organization. F. L. Thomas, newly elected agricultural agent of Waukesha County, was also heard.

Emery Back in the Harness

After a retirement of six years, Mr. J. Q. Emery resumes the duties of Dairy and Food Commissioner for the state of Wisconsin by appointment of the Governor and unanimous approval by the State Senate. His appointment was urged by the dairy interests of the state that desire the enforcement of its food and dairy laws for in his thirteen years of service from 1903 to 1915 he made an enviable record.

It was under Mr. Emery's administration, and largely by reason of his ability and fighting qualities, that our laws were strengthened and court interpretations secured that made the Dairy and Food Commissioner feared and hated by those who sought to market imitation food and dairy products in violation of the law. He was never accused of being lax in the enforcement of laws, or of showing favoritism and special privilege to any individual. He stood for the production of honest goods, honest manufacture, and honest marketing. He believed that laws were passed to be enforced, and that if enforcement disclosed they did injustice they would be repealed. He felt it to be his duty to carry into effect the laws enacted by the people of the state through their properly chosen representatives.



If Wisconsin is to build a dairy industry that will bring the largest returns to producers and manufacturers, it must be built on honest, clean, and quality production. The dairy and food commissioner's office touches the industry from the production of the milk on the farm to the time it reaches the consumer's table, seeking to give honest products an honest market. Mr. Emery's past experience makes it possible for him to take up the work of his office with understanding and to carry it forward without hesitation or vacillation. He needs the active co-operation of the dairy interests if his work is to be most effective, and this they will gladly extend to him.

C. P. GOODRICH

ON January 22, 1921, death claimed Wisconsin's leading and pioneer dairy farmer, Charles Perry Goodrich. Mr. Goodrich was born in Stockbridge, Madison Co., N. Y., February 8th, 1831, and came to Jefferson Co., Wisconsin, in 1846 with his parents. His father purchased a part of his farm and homesteaded the rest.

His family were truly pioneers of Wisconsin and only those who passed through that period know of its hardships and privations. The opportunities for attending school were limited and only those who had a strong desire for knowledge acquired an education. Mr Goodrich had the type of mind that sought information and appreciated its advantages. This led him to do much reading and to make close observations, and by such effort he equipped himself for his life's work.

Dairy farming became his chief occupation and his advanced position

C. P. GOODRICH

upon matters pertaining to dairy husbandry brought him recognition from the leading dairy authorities, not only of Wisconsin but of the United States. He was a farmer in Wisconsin when wheat was its chief crop and he appreciated fully its evil results. He hailed the coming of the dairy cow, for he knew this meant permanency and prosperity to the agriculture of Wisconsin. She not only meant a larger financial return to the farmers, but a conservation of the fertility of the soil. He often stated that "a farmer who leaves his soil poorer than he found it is a robber, for no one owns the land he occupies. It is simply committed to the owner's trust for a period of time and the coming generations are entitled to receive it in as good condition as it was when the farmer acquired its use." This was an advanced position upon the relationship of the farmer to his land and shows his conception of the responsibility the farmer of today carries for the farmer of tomorrow.

He revealed in other ways that he was an advanced thinker. His close association and study of cows led him to conclude there was a great difference in the profit each returned. Before the days of the Babcock test he weighed each cow's milk, set the milk in separate pans, and in this way tried to ascertain the yearly production of each cow in his herd. When the Babcock test came he accepted it and, we believe, was the first dairy farmer to use it.

He not only sought larger returns by applying practices which would make his acres yield large crops and his herd produce more fat, but by establishing a better market for his butter. Selling his butter to grocery stores and receiving the same price for it as was paid for inferior quality and taking groceries in return did not satisfy him. He trained himself to make good butter and then he put it up in firkins and found a market for it in Chicago. This brought him a cash return and a much better price for his product. He had the initiative in solving his own marketing problem.

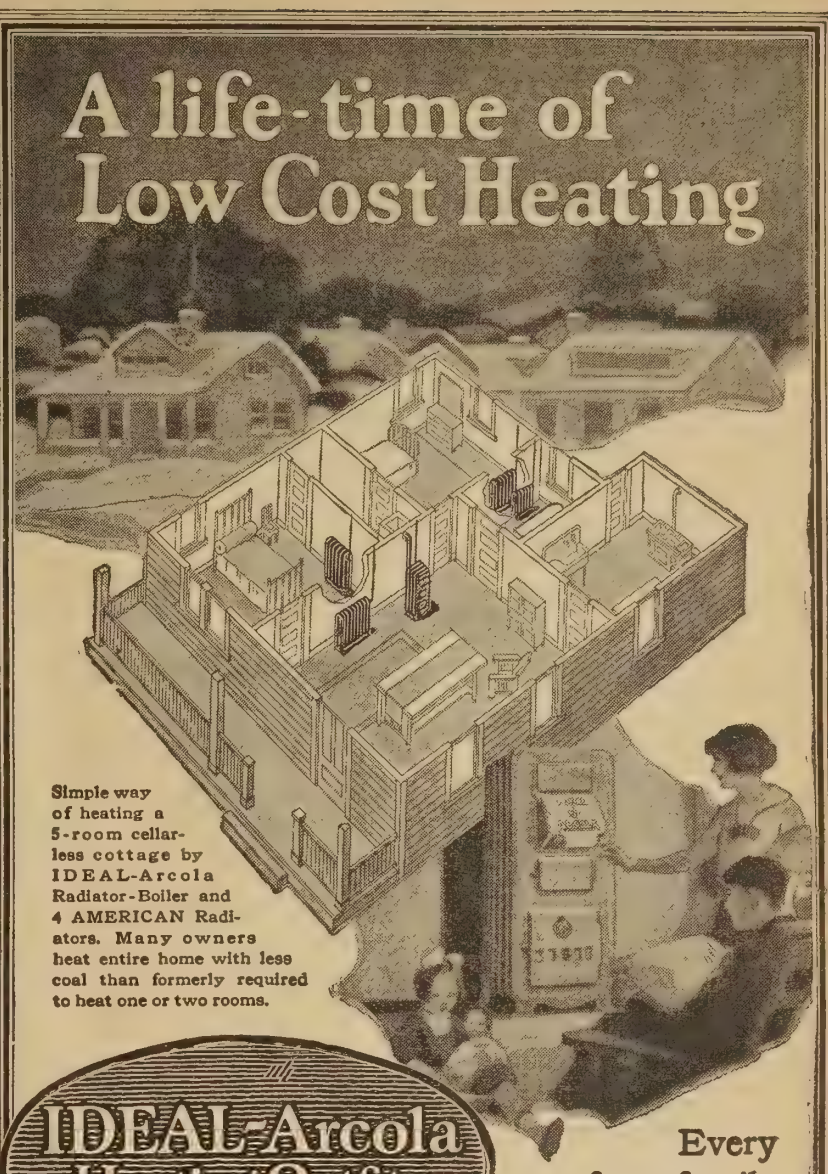
Mr. Goodrich's unusual work as a farmer led those in charge of the farm institutes in Wisconsin to seek his service. He was sixty years old when he began this service. He was fifty when he made his first talk before a farmers' meeting. He reminded us several times that that was the hardest job he ever tackled. He became, however, a most convincing and interesting speaker, and we doubt if there was any man in Wisconsin who wielded a greater influence with farmers.

He believed in his subject and he never hesitated to speak his mind. Platitudes and talking for popular applause were inconceivable to him, for he went straight to his subject and let the chips fall where they would.

Outside his dairy farming activities he devoted himself for twenty years to surveying, and also for forty years was a contributing editor to Hoard's Dairyman. In this capacity we were brought closely together, and in our interviews we found him with a keen understanding of the problems of the dairy farmer and with a deep interest in his welfare. His last communications to Hoard's Dairyman were a series of articles upon the early history of dairying in Wisconsin and no one knew better than he the meaning of this industry to the agriculture of that state.

He was a soldier of the Civil War and his shrewdness for doing the hazardous work placed upon him brought to him special recognition from his officers.

Even at the advanced age of nearly ninety years his mind was alert to business, new discoveries, and advancement. At the time of his death, he was president of the James Manufacturing Co. and from the beginning of this institution he took a keen part in its development.



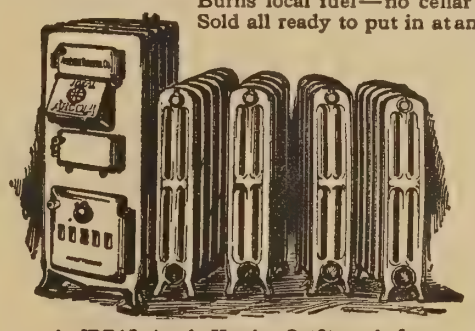
The life of this man shows what can be accomplished by reading, right application, and hard work. He exemplified a true Christian character, for he gave a reliable, intelligent, and fearless service to all activities in which he was engaged.

My Fancy of Falcon's Flight

By completing a production of 18,214.7 lbs. milk, 979.11 lbs. fat, the Guernsey cow, My Fancy of Falcon's Flight, owned by G. W. St. Amant, Massachusetts, takes eighth place among the breed's heaviest producers. She is a half sister to Countess Prue, champion of the breed, being by the same sire, Bell-founder. She was purchased in January, 1919, from Falcon's Flight Farms, Connecticut, for $5,000 and completed her record there.

Pruning may be done at odd times on warm days and in fact all through the winter.

A life-time of Low Cost Heating



Simple way of heating a 5-room cellarless cottage by IDEAL-Arcola Radiator-Boiler and 4 AMERICAN Radiators. Many owners heat entire home with less coal than formerly required to heat one or two rooms.

IDEAL-Arcola Heating Outfits

Every farm family can now enjoy Hot Water Heat

—the kind that fine modern city residences have. IDEAL-Arcola Heating Outfits have made the cost *low enough* for the most modest farm home, to fit the house and pocket-book of any farmer. Nothing that can be put in a farm home will give so much pleasure, comfort and good health as an IDEAL-Arcola Heating Outfit. Burns local fuel—no cellar or running water needed. Sold all ready to put in at any time without disturbance.

An IDEAL-Arcola Heating Outfit, ready for installing anywhere, anytime by all dealers.

An IDEAL-Arcola Heating Outfit is not only the cheapest in the long run (never wears or rusts out) but will actually give you *more* and *better* heat with less bother, work and fuel than any other device. Install an IDEAL-Arcola Heating Outfit and have the delightful, soft hot water heat which protects the health of your family and makes all winter days delightful on the farm.

Illustrated catalog showing open views of IDEAL-Arcola Heating Outfit installations in 4, 5, 6 or 7 room house sent free. Write today.

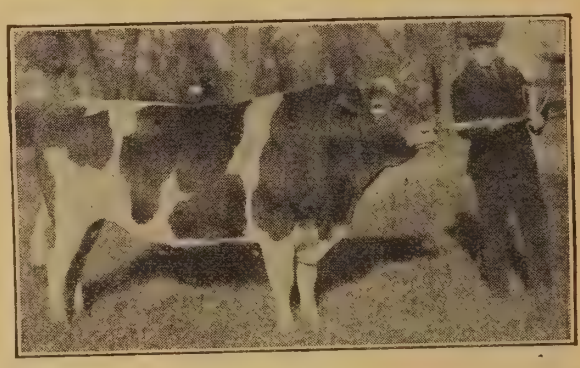
Co-operative Buying and Selling in Business Insurance

W. J. HAGAR, NEW YORK

FIVE years ago a farmer living in the eastern end of Montgomery County, New York State, might have been able to buy feed from which and with which he could mix a good cow feed. Sometimes he could get what he wanted; more often he could not. Rather than take what the market offered, he got in the habit of buying a ready mixed feed. Sometimes he secured near his money's worth; usually he did not.

Today this farmer can stop at his own co-operative association and buy either the ingredients of a good ration; get advice as to proper mixture to feed; or, if he does not care to mix a ration himself, buy a ready mixed ration of guaranteed constituents in guaranteed proportions compounded in accordance with the state college's directions. These feeds are purchased in carload lots by his own employees to insure low prices. The money comes from his loaned credit. The capital used in conducting this business is all secured in the following manner: A man joins the association by paying a dollar membership and a dollar annual dues. This is all the cash he invests. He gives his note in the sum of a hundred dollars payable to the association. This note is endorsed by the officers of the association which is incorporated under a state law, and these notes are deposited at a bank which loans up to eighty per cent of the face value of the note. Interest for use of money is paid by the association out of its commission earnings.



This co-operative association handles all kinds of feed, flour, hay, wire, binding twine, harness, machinery on order, etc. It is the sales agent as well as the purchasing agent for each and every member. Through the effort of this sales agency the selling price of hay has been advanced approximately five dollars per ton. Time was when hay buyers bought at their own figure. Now the association sets the figure and the others have to come up to it or pass it to get hay. The co-operative association was really organized to sell hay. Hence its name: The Montgomery County Co-operative Hay and Produce Association, Inc. The hay association has been in use since the fall of 1918. It was organized by the county farm bureau as a demonstration in marketing. The manager of the association for the past three years up to September has been the county agent. He resigned from this position to assume the management of the Co-operative Association. The assistant manager was assistant farm bureau manager for a year in the same county. He has been with the Co-operative Association for two years. These two young men under the direction of a capable board of directors manage the business of the association.

During the first two weeks in September the members sold fifty carloads of hay netting them, through their association, from twenty-eight to thirty-two dollars per ton. The member phones or otherwise tells the manager that he is ready to sell. The manager visits the farm, inspects the hay, sometimes in the mow but always after pressing, and markets the hay to the general satisfaction of the member. It is thought that for the duration of service of the association hay has netted three to eight dollars more to the grower than before the association served.

It will thus be seen that the farmers have insured the receipt of a fair price for their hay, their chief cash crop next to milk. They have also insured good feed at reasonable prices. They buy other necessities at rock bottom prices. They employ two agricultural college and organizational trained men as managers whom they call upon for such service as they can give. These members are almost unanimously farm bureau members so they have the regular county agent to assist them. Their association is in close contact with the State Department of Farms and Markets as well as with the Federal Department of Markets. These farmers believe in helping themselves and getting as many others as possible to help them.

The president of the Co-operative Association is also the president of the county farm bureau. Under his supervision the bureau has nearly maintained its membership in spite of the doubling of the membership fee. He fathered the organization of one of the first co-operative bull associations in the East, some twenty farmers together buying a ten-thousand-dollar bull to head their herds of pure-bred Holsteins. This association, too, is financed on the membership note plan. The notes of the bull association and of the hay association are held by the Montgomery County Trust Company of Amsterdam, the largest city of the county. This bank has also financed two calf clubs, projects of the farm bureau, and a pig club. It is one of the most alive banks in the East and the most alive one in the county. It recognizes the value of agriculture and uses its influence in the promotion of this industry as freely if not more so than in the promotion of the manufacturing interests with which the county abounds.

There are times of trial, too, in the running of the hay association. It is to the interest of the competing hay handlers to annihilate this co-operative industry. It prevents their taking toll of more than a dollar and a half a ton in ordinary business conditions. In times of chance, however, when the farmers lack the nerve to play the commission market and when the co-operative association refuses to play it, then the hay buyers give the association a hard heat. Some farmers there are who will use every advantage to make a dollar more; use their neighbor as well as themselves;

Elmer Brown, student at the Iowa State College, holding the Guernsey herd sire for the college, Lady Gree's May King of Jean Du Luth. Mr. Brown fitted this bull and showed him in the "Little International" held at the college, and won the Ray Arnold trophy.

use their association; use anything to make an extra dollar. Happily for the association that few such are among its members. The association is used by non-members as a lever with which to elevate the price of the ordinary hay buyer. They get many of the advantages of the association in this way. However, they pay non-member prices for whatever they buy.

The most recent service offered by the association is to deliver by auto truck to the most distant members, especially to the ones living in territory about to be developed and served by a branch office, cow feed and grain by-products. All kinds of feed can be delivered to their farms at a lower price than they are paying their local feed men and drawing the stuff home besides.

All kinds of seed are handled by the co-operative; no seed, however, but that recommended by the state college through the farm bureaus. The association is trying to extend the kind of service the farm bureau has preached for all the years it has existed. Such service should be appreciated and supported to the limit. The maintenance of such an association is the only insurance to farm business—profitable farm business and provident agriculture.

Much Grain and Little Roughage

Makes Milk Costs High Fed to Poor Cows

A clean-cut cross section of southern dairying is placed in relief by the United States Department of Agriculture in its report of milk production studies in the New Orleans district. The data presented are astonishing to those not familiar with the production of milk on Louisiana and Mississippi farms. To those engaged in dairying in that section, the facts should be distinctly informing.

For two years production costs have been kept on seventeen herds containing about 450 cows. During the winter of 1919-20 the cost of producing 100 lbs. of milk on these farms was $5.57. In the summer of 1919 it was $3.51; in the winter of 1918-19, $4.97; and in the summer of 1918, $2.91. During the first year the 452 cows on which records were kept averaged 2,994 lbs. milk containing 137.7 lbs. fat; the second year the average was 3,263 lbs. milk, 147 lbs. fat. The cost of production varied greatly in different herds, being twice as much in some as in others. During the second winter one herd made milk at a cost of $3.22; in another it cost $6.96.

Among the facts regarding southern dairying which the data bring out, according to the Department, are that "compared with other milk producing sections of the country the quantity of grain fed during the six months' winter period was very large, the quantity of roughage was unusually small, the production of the cows was remarkably low, in fact, considerably below the average for the whole United States."

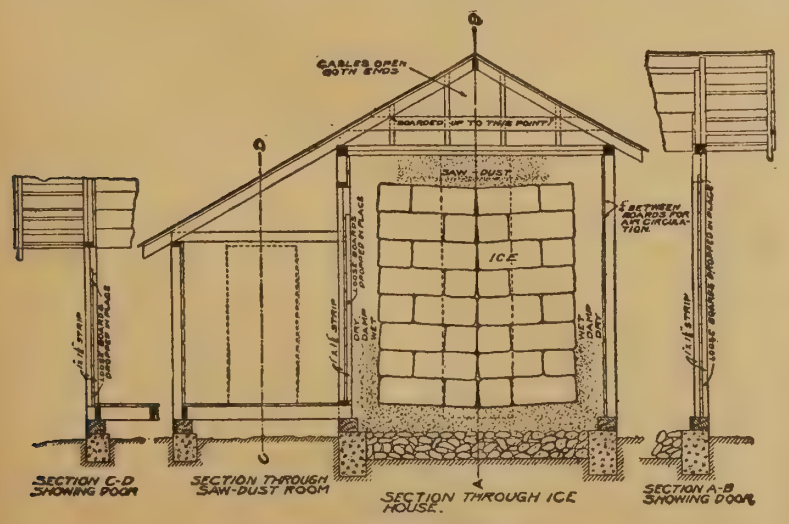
It was found in the two winter periods covered by the test that the production of 100 lbs. of milk required: 72.4 lbs. grain, 38.3 lbs. hay and other roughage, 78.4 lbs. silage and other succulents, .3 of a pound of bedding; 15.5 cents for pasture, 9.5 cents for hauling and grinding grain; 5.8 hours labor, .9 of an hour of horse labor, and $1.22 for such charges as interest, taxes, depreciation, etc. In the summer the requirements included 52.5 lbs. grain, 1.9 lbs. hay and other roughage, 8.1 lbs. silage and other succulent feed, 5 hours labor, .7 of an hour of horse labor, 19.7 cents for pasture, 5 cents for hauling and grinding grain, and 80.3 cents for other costs. Credit was given in calculating the cost of 100 lbs. of milk for .033 of the value of a calf and 127.7 lbs. of manure in the winter and .023 of the value of a calf and 78.2 lbs. of manure in the summer.

Specifications for Open-type Ice House Uninsulated

The accompanying plan illustrates a small frame ice house such as is recommended by the Rochester (N. Y.) health board.

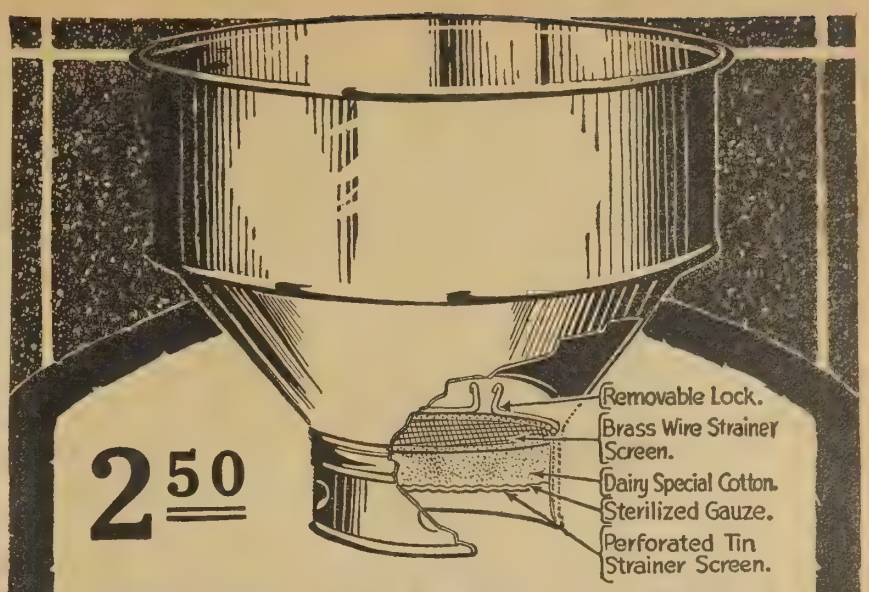
FLOOR—Should consist of 12 inches of crushed stone or coarse gravel well tamped into place.

WALLS—The walls consist of 2 by 4-inch studs spaced about 2 feet center to center and erected on 6 by 8 inch sills. On the inner side of the studs are placed 1-inch rough boards with a ¼-inch space between. The object of the open construction is to dry out the outer layers of sawdust around the ice.



CEILING—No ceiling is provided. The gables are left open to permit circulation of air over the ice.

DOORS—Doors are constructed as shown and consist of loose boards dropped into place.



DRAINAGE—Drainage is provided by sloping the floor toward the center of the house. If the house is built on porous soil no drain will be needed; otherwise one of the forms of drainage described under post ice houses should be used.

ROOF—The roof is constructed with an overhang of about 2 feet to prevent rain from blowing in on the top of the ice.

SAWDUST ROOM—A storage room for sawdust should be constructed.—Taken from Farmers' Bulletin 1078.

OPEN TYPE ICE HOUSE

2.50

FILTER YOUR MILK

CP CHAPMAN STRAINER AND FILTER

A combined strainer and filter for the price of strainer only. To use the Chapman as filter, insert a layer of cotton and sheet of gauze between the two screens.

The filter will remove bacteria, dandruff, hair, blood corpuscles, straw and other substances that a strainer only can't catch. Thus will greatly improve the quality and flavor of the milk and prevent it from souring quickly.

Can be quickly taken apart for cleaning.

Consists of heavily tinned charcoal steel bowl, ring lock, fine mesh brass screen and perforated tin screen. Cotton and gauze furnished at extra prices below.

Strainer and Filter Complete $2.50

Postage extra, 30c

Wgt. 2 lbs. Size 12" in diameter.

Dairy Special Absorbent Cotton

Single lb. lots, 60c a lb., in 25-lb. lots, 55c a lb., in 50-lb. lots, 50c a lb., in 100-lb. lots, 47½c a lb.

Dairy Special Sterilized Gauze

Less 100 yards ..... 12½c per yard
100 to 150 yards ..... 10c per yard
500 yards and over ..... 8½c per yard

Above prices guaranteed until March 4th only. Send for Big Dairy Mail Sales Catalogue.

Don't Split With the Miller

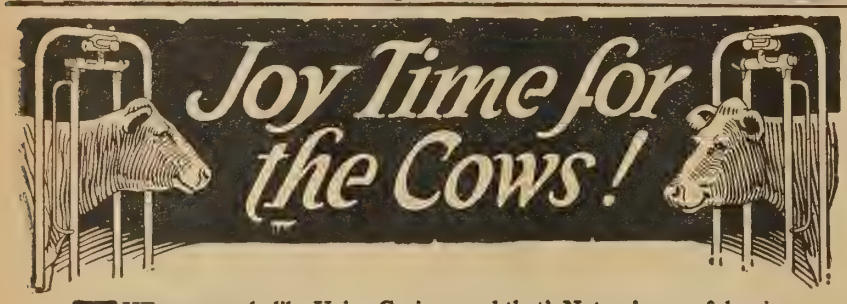
Grind your own feed at home. Save miller's profit and long haul to town. Feed efficiently and economically.

HOWELL *Roller Feed Mills*

grind stock feed, rye or graham flour easily, cheaply—a wagon load in an hour at a cost of 15 cents. Grind twice as fast as buhr mills at one-half expense. No buhrs, no stones to wear out. Guaranteed to get the wild oats. Scientifically built, Last a lifetime. 13 Sizes—any capacity—a size for any engine.

FREE complete catalog and Famous Roller Mill Puzzle. Write now. R. R. HOWELL & CO, 4 Malcom Ave. S. E., Minneapolis, Minn.

MILWAUKEE Mayer TRADE MARK CUSTOM MADE HONORBILT



WHEN your shoe dealer recommends an Honorbilt Shoe he does it with pride and confidence.

He knows the sterling value of Honorbilts. He knows too that they are customer makers and customer holders for they never disappoint.

Honorbilt dress shoes of today contain the same honest quality leather of which they were made 39 years ago. The name Honorbilt has always stood for the utmost in shoe service.

Honorbilt dress shoes and work shoes—shoes for the whole family—are sold by leading dealers everywhere. Look for the name Honorbilt on the soles.

F. Mayer Boot & Shoe Co., Milwaukee, Wis.

THE cows surely like Union Grains—and that's Nature's way of showing that it's good for them. It contains just the right elements to make cows happy and healthy, with the big flow of milk that it is sure to bring.

Hundreds of the most successful dairymen who are feed experts themselves use Union Grains because in careful tests in which they weighed the milk and figured the cost of feed—Union Grains proved itself more economical.

It saves the time and trouble of mixing, too, and makes it possible to use that time to better advantage. Feed Union Grains and you know the feed is always right. Know where you make and where you lose money by keeping a Ubiko Cost Sheet. It will tell you which feeds and which cows pay best. Write for it. It's free.

We also make Ubiko Calf Meal, Ubiko Stock Feed, Ubiko Pig Meal and Ubiko Poultry Feeds.

Association Notes

Clinton-Wayne, Pennsylvania—Several meetings have been held by the Dairymen's League Branch and the dairymen are signing without any hesitation. One carload of oil meal was bought co-operatively by the members and the Grange in December. A county-wide farm bureau drive for members is on. Each man will receive a poster to indicate that he is a member. Three per cent market milk in December sold for $3.18 per cwt. and 4c per point above this test. The creamery paid 63c per lb. for fat. Milk retails for 12c per quart. Feed prices are: bran, $43 per ton; gluten, $60; cottonseed meal, $65; oil meal, $47; corn and oats, $44.

Canton, Pennsylvania—There was a general tendency during the autumn in this district to wait until a level had been established in feed prices before purchasing large quantities. The milk situation is still a source of worry to the dairymen of this section, but the majority have faith in the success of their industry. December market milk testing 3% sold for $3.08 per cwt. and 4c per point above. The creamery paid 73c per lb. for fat. Milk retails for 14c per quart and butter for 60c per lb. Local prices for feed are: cottonseed meal, $50 per ton; oil meal, $57; gluten, $60; bran, $45; corn meal, $45; ground oats, $45; hominy, $45; Unicorn Dairy Feed, $64.

Rome, Pennsylvania—Feed is now being procured through the Dairymen's League at a great saving. In the vicinity of Le Raysville a co-operative creamery has been organized and began operations January 15, 1921. Three per cent market milk in November sold for $3.65 per cwt. and 4c per point above. The creamery paid 64c per lb. for fat. Milk retails for 13c per quart, butter for 60c per lb., and cheese for 35c. Feed prices are: hay, $18 per ton; corn silage, $6; gluten, $60; oil meal, $70; wheat bran, $55; corn, $40; oats, $40.

Barnesville, Ohio—December market milk testing 3.5% sold for $3.50 to $4.00 per cwt. and 5c per point above. Milk retails for 15c per quart. The following prices were paid for feeds: Larro, $3.20 per cwt.; bran, $2.30; oil meal, $3.10; cottonseed meal, $3.10; hominy, $2.50; corn, $1.80; oats, $2; beet pulp, $3; gluten, $2.75.

Kent County, Michigan—Many members of this association have made application to have their herds tested for tuberculosis by the state veterinarian. They desire to place their herds on the Federal Accredited List. The majority of members are feeding home mixed rations. During December $3.60 was paid for 100 lbs. of 3.5% market milk. The condensery paid 50c per lb. for fat and the creamery paid 51c to 61c per lb. Milk retails for 15c per quart and butter for 48—55c per lb. Local feed prices are: Unicorn, $62.50 per ton; cottonseed meal, $52; oil meal, $68; corn meal, $45; ground oats, $40; bran, $37; gluten, $50; clover hay, $22; alfalfa, $30; timothy, $25; corn silage, $8; oat straw, $10; corn stover, $10.

Empire-Osceola, Wisconsin:—Local feed prices for December were: silage, $8 per ton; alfalfa, $20; clover, $20; clover chaff, $12; bran, $35; hominy, $42; oil meal, $50; cottonseed meal, $50; oats, $28; barley, $34; corn meal $32.

Roberts-Hammond, Wisconsin:—Two farmers have installed milking machines and three others have installed drinking cups. Several head of stock were disposed of through the stockyards.

Monticello, Wisconsin—One member has increased his herd average of butterfat production from 22.5 lbs. to 28 lbs. by feeding a little grain. The December price for 3.5% market milk was $2 to $2.25 per cwt. and 4c per point above. The creamery paid 45c to 50c per lb. for fat. Milk retails for 10c per quart and butter for 60c per lb. Feed prices are: oats, 50c per bushel; corn, 90c; bran, $35 per ton; oil meal, $54; silage, $8; hay, $30.

Orangeville, Illinois—This association is one hundred per cent in the use of pure-bred bulls and in the equipment of silos. All of the members are now feeding balanced rations and have bought bran and oil meal co-operatively. The men are now planning on a large plant where they will make condensed milk, cheese, and butter. This will mean more money for them as well as more satisfaction. December market milk testing 3.5% sold for $2.20 per cwt. and 4c per point above.

Rutherford County, Tennessee—Every member is learning the value of proper feeding and as a result most of them are feeding balanced rations. More cows are being entered on the R. of M. test each month. One member has shipped all of his unprofitable cows to the butcher and thereby increased his monthly average. December feed prices are: oats,

$2.50 per cwt.; cottonseed meal, $1.80; corn, $1.10.

Bourbon County Co-operative, Kansas—About six unprofitable cows have been disposed of during December. Two car-loads of cottonseed meal have been purchased through the Farm Bureau at a cost of $33 per ton. One pure-bred Holstein bull was bought by the Bourbon County Holstein-Friesian Company to be used on the unit near Fort Scott. His sire is Sir Ormsby Skylark. Cows showed quite an increase in December over November, due to better feeding and the nice weather conditions. There seems to be an abundance of feed in the country and it is expected cows will hold up well this winter. December market milk testing 4% sold for 26c per gallon. The condensery paid 60c per lb. for fat, plus 6c per 100 lbs. milk, and the creamery paid 40c per lb. for fat. Milk retails for 12½c per quart, butter for 50c per lb., and cheese for 35c per lb. Feed prices are: silage, $8 per ton; cottonseed meal, $33; corn, 40c per bushel; oats, 45c.

Monona-Farmersburg, Iowa—Three pure-bred bulls were bought during December, and six cows were sold to the butcher. Eleven herds had averages above 30 lbs. fat. The creamery paid 70c per lb. for fat. Local feed prices are: silage, $4 per ton; mixed hay, $20; alfalfa, $36; corn stover, $5; corn and cob meal, $20; oats, $25; bran, $37.50; cottonseed meal, $53; oil meal, $60.

In December, 1919, the average production for this association was 540 lbs. milk, 23.96 lbs. fat, 30 cows making over 40 lbs. fat. In December, 1920, 53 cows went over 40 lbs. fat, the association average being 630 lbs. milk, 27.50 lbs. fat. While in January, 1920, there were 18 grade or scrub sires, this new year finds the association free from this kind of animal, 27 pure-bred bulls in service in the herds. Twelve new silos have been bought by members in the past year; several more will go up before filling time. Five members have started with registered females. Four carloads of cottonseed meal were shipped in, two cars of alfalfa (with two more ordered), and the local dealers are carrying feeds now which they never had before. While the testing year does not start until May 1st, a number of applications for membership are being received.

Arkansas Valley, Colorado—In December $2.25 was paid for 100 lbs. of 3.5% milk. Milk retails for 12½c per quart. Feed prices are: alfalfa, $10 per ton; silage, $5; alfalfa meal, $27; fodder, $2.50; cane hay, $6; beet pulp, $2 per cwt.; tops, 50c; bran, $1.20; cottonseed meal, $3; shorts, $1.70; speltz, $1.25; oats, $1.20; barley chop, $1.30; barley, $1.20; corn chop, $1.40; corn, $1.30; maize, 90c.

Douglas County, Colorado—Feed prices for December are: alfalfa, $14—$16 per ton; silage, $8; bran, $1.65—$2.50 per cwt.; cottonseed meal, $2.50—$4.25; linseed meal, $4—$4.50; oats, $1.50—$2; rolled barley, $3; corn chop, $1.70—$2.50.

An Object Lesson in Testing

HOARD'S DAIRYMAN:—The Jersey on the right in the picture, Chieftain's Little Belle, of the Kinsley Brothers Register of Merit Jersey herd of Iowa, was the high cow in Iowa cow testing associations in 1919 and has finished 1920 in second place, falling just four pounds of butterfat short of making first place a second time. Her butterfat record for 1919 was 520 pounds and for 1920, 651 pounds.

The record of this Jersey is about

EDITORIAL COMMENT

In Wisconsin farm tenancy seems to lead to ownership. Studies by the Wisconsin Experiment Station indicate that tenancy is a stepping stone to ownership. In recent years, ownership is delayed to a later period in a man's life. It has been found that in the first purchase of land, five-sixths of the money required was furnished by relatives or by retired farmers in the community. It is emphasized that even though this fact relieves the strain on local banks and other credit institutions, very much better results could be accomplished if the credit of young farmers could be taken care of through an organization of credit effort.

SIGN YOUR NAME

"I am in the market for a young bull. Dam above 25 lbs. with yearly backing. I am a farmer and want a bull that will improve my herd. Have you anything that will fill the bill, priced right?"

So writes a reader to an advertiser using the columns of Hoard's Dairyman. A good prospect for a sale? No—for the writer did not sign his name! Therefore the advertiser cannot reply. The advertiser writes this office, "We get loads of letters like this and then the writers wonder why we never answer."

A good many readers write us each year who fail to sign their names. We are anxious to reply to inquiries quickly, giving accurate, useful information. Sometimes the nature of the questions indicates that an early answer is very much desired. We would gladly furnish it, but cannot. When you "take your pen in hand", you must identify yourself to the one receiving the letter if you are to get a reply. Sign your name.

TOO MUCH INFORMATION

Certain companies buying milk from farmers do not care to have their patrons read Hoard's Dairyman. A field man of one of these institutions recently made the statement that if we would neglect to give our readers certain information, especially that pertaining to the prices of milk and its products, he would urge all of its patrons to become subscribers. He also stated that the readers of Hoard's Dairyman cause him the most trouble.

It is our purpose to be accurate and fair. We do not believe we are to build a permanent dairy industry upon any other basis than that of justice. To keep milk producers ignorant of facts to which they are entitled so they may secure proper prices for their products or select the best market is, to us, a crime. What we need, above all things among the dairy farmers, is more light. Any institution that attempts to keep its patrons in ignorance and desires a dairy paper to print only such material as it thinks the dairy farmer ought to have, is placing itself in the class with autocrats who believe no knowledge should be given to the people except that which they think is good for them.

It is not our purpose to cater to large corporations or even to our readers but it is our aim, and it will ever be, to render service and to give reliable information concerning the production of milk and methods of marketing to the best advantage and the prices of dairy products in the various sections of the United States. We consider it our duty to give all the information necessary for the farmer to protect his own interest and to direct his business intelligently. We would consider ourselves traitors to our subscribers if we withheld information which would be to their advantage, in order to benefit the companies that buy their products.

We see no reason why all dairy enterprises should not be conducted upon a fair business basis. There is no necessity for secrets or for withholding information. The farmer appreciates that the company which buys his product is entitled to a profit for if there were no profit the company would soon pass out of existence, and this is not to the farmer's advantage. There would be less suspicion and a better relationship between the purchaser of milk and the producer if all companies would see fit to take their patrons into their confidence. We cannot conceive of anything more contemptible than an institution's attempt to keep patrons in ignorance of facts to which they are rightly entitled.

ORGANIZATION OR PRODUCTION

The subject of farm organization and its purposes receive more than passing attention by many farmers meeting this winter. It has been announced by a few interested in farm institutes that the subjects of feeding the cow, crop rotation, soil fertility, and other allied subjects are temporarily set aside, but not permanently.

For the time being and under present conditions it may be well for farmers' meetings to devote their attention entirely to farm organizations and to have pointed out to them what these farm organizations can and cannot do. It is well that all farmers should have a thorough understanding of the purpose and object of their organization. It should be borne in mind, however, that it would be a serious mistake to neglect farm subjects which have to do with better methods of farming, more economic production, and better systems of marketing farm products. We must not forget that the farmer himself controls to a very large extent the profit he makes from his efforts on the farm. While organization is necessary to improve agricultural conditions, to give opportunity to carry into practice plans for agricultural development, yet the stubborn fact remains that the quality of management of the farm is of more importance to successful agriculture.

There is a tendency, in fact more than a tendency, upon the part of a large number of not only farmers but other people, to be constantly depending upon their government and their organizations to solve their problems, to bring them economic relief and to increase the profits of their endeavor. It is the function of the government to protect its people and property and to give opportunity for freedom that all people may gather the fruits of their labor and develop their industries without being hampered by individuals or corporations. The farmers may well look to their organizations to do things for them which they themselves cannot do individually but there is such a thing as depending upon these agencies too much, for the farmer is largely responsible for the success in the operation of his farm.

THE INTRADERMIC TEST

The subcutaneous tuberculin test has been in general use for 25 or more years and has generally been accepted as being the most reliable. The objection to this test, however, is that it requires more time to apply it than the intradermic test, but there has been a hesitancy upon the part of those studying the different methods of tuberculin tested cattle to generally recommend the use of this latter test. We are happy, however, to note that the past two or three years the use of the intradermic test has made rapid progress and many well informed veterinarians believe it to be as accurate as the subcutaneous test.

The Bureau of Animal Industry, in testing thousands of cattle during the past year and using both the subcutaneous and the intradermic tests, has found that they worked closely together. In the tabulation of many thousands of tests, 94% of the animals which gave reaction to the subcutaneous test showed lesions upon post mortem, while of the many thousands tested by the intradermic test which responded to it, 93½% showed lesions. This is strong evidence that the intradermic test is quite as efficient as the subcutaneous test. If the intradermic test ultimately proves to be as reliable as the subcutaneous test, then our tuberculin testing of cattle has been simplified and much more work can be done toward the eradication of tuberculosis.

We believe with our present knowledge of the efficiency of the intradermic test it may well be applied the first time to herds desiring to become accredited or free from tuberculosis and if no reactors are found they may be considered free from the disease. If there are reactors to this test, they can be checked by the application of the subcutaneous test, especially if circumstances warrant the application of another test.

THE FARM BUREAU

The New Year's greetings extended to the county agents throughout the United States by the Department of Agriculture States Relations Service contain a brief statement of the history of the farm bureau and the county agent. We quote:

"The New Year brings the tenth birthday of county agent work in the northern and western states. It was on March 20, 1911, that J. H. Barron began his work in Broome County, New York, as county agent of the United States Department of Agriculture in a small area around Binghamton, as manager of the farm bureau of the chamber of commerce. The Delaware, Lackawanna, and Western Railway, the Binghamton Chamber of Commerce, and the United States Department of Agriculture furnished the funds for the employment of this agent, share and share alike. The Grange was the point of contact with farmers."

This shows that the business interests as well as the Department of Agriculture and the Grange saw the necessity of county agent work. Funds were raised by the chamber of commerce, the railways, and the Department of Agriculture so that the services of a county leader or manager could be secured. The work done by the county agent was so satisfactory and gave such good results that other counties took it up and upon the same plan. As time went on it was discovered by leading farmers that this was not the proper basis upon which farm bureaus should be organized or county agents employed, as it did not place the welfare of agriculture entirely in the hands of the men following this occupation.

Recently the present plan of forming county farm bureaus was accepted as being the best and that the farmers should contribute a sufficient membership fee to provide adequate funds for carrying on the organization and that no one shall become a member of the county farm bureau unless he owns a farm or is a renter of a farm. This has placed the county farm bureau in the hands of men interested in the development of agriculture and who profit directly by its success. We think this change is wise and since it is made we have given this organization our editorial support for we believe that if agriculture is to be saved, developed, and placed in the position which it should hold, it must be done through the efforts of the men who own and occupy the land. No outside agencies, no matter how good their intentions may be, will ever be able to accomplish as much for agriculture as those who have financial investments in it.

Pasteurization and the Cream Line

We are putting out a clarified, pasteurized, and standardized 4% milk. This milk has the usual cream line that follows pasteurization to 145 degrees.

There is on this market another so-called pasteurized 4% milk with the cream line which appears to the eye to contain almost twice as much butterfat as ours, but which on numerous analyses has proven to contain from 6-10 to 1% less butterfat than ours.

Can you advise us by what mechanical process, if any, this result is obtained? If you can refer us

to any authority on the subject, that would throw light on this problem, we would appreciate it.

Texas. Subscriber.

The depth of the cream line in milk bottles of pasteurized milk of any given percentage of fat depends on two fundamental factors, namely those that control the completeness and rapidity with which the fat rises to the top in the bottle and those that control the volume of non-fatty milk constituents carried into and held in the cream line.

The first factor, that which deals with the readiness and completeness of the fat separation, depends largely on such items of manufacture as the temperature and manner of heating the milk in the pasteurizing process.

The second factor, that which deals with the volume of non-fatty milk constituents in the cream line, is influenced largely by the manner of heating and cooling and the rapidity with which the fat comes to the top.

The second factor is the dominating one. The butterfat alone occupies very little space and would make the cream line very shallow if it were not for the relatively large amount of non-fatty material contained in the cream line. Thus, in a standard one-quart milk bottle filled with 4% milk there will normally show a cream line approximately three inches deep, assuming that the bottle is filled completely full. In 4% milk the volume of the pure butterfat stands to the volume of the normal cream line as about 1 to 3.6. In other words, of every 3.6 parts of cream line there is only one part of fat so that, for instance, in the standard one-quart milk bottle, if the normal three-inch cream line were poured off and in the place of it the pure butterfat contained in a quart of 4% milk were added, the depth of the layer of pure butterfat would be only ⅝ inch. The extremely shallow cream line in case of pure butterfat here is in part, of course, due to the widening of the diameter of the bottle in the lower section of the neck, but even if measured in the top of the neck, where the neck is narrowest, the cream line consisting of pure butterfat would not exceed 1⅝ inches.

The above facts show very clearly that in order to secure a maximum depth of cream line, it is necessary to handle the cream in such a manner as to cause the fat globules to rise to the surface exhaustively and particularly also to insure the carrying up into, and holding in the cream line the maximum amount of non-fatty constituents.

Temperature of Pasteurization:—The temperature to which the milk is heated is exceedingly important. Up to a certain point, heating increases the cream line and beyond a certain point heating again decreases the cream line. This fact is brought out in the following tables in which the milk was heated to temperatures ranging from 131 degrees F. to 147.2 degrees F. At each temperature a sample of milk from the same batch was also subjected to the cream line study without heating.

Table I—Effect of Pasteurization on "Cream Line" of Milk

(Note—"P" means pasteurized milk, "R" means raw milk of the same batch. The Figures under "P" and "R" represent the measurements of the "cream line" in cubic centimeters.)

These tables show that both the depth of the cream line and the rapidity with which it is formed, increased up to a temperature of 141.8 degrees F. At all temperatures used up to 141.8 degrees F. the formation of the cream line was complete after the second hour and at 138.2 degrees F. to 141.8 degrees F. the separation was complete after one hour standing. In the raw milk, the cream line even at the tenth hour was still incomplete. The rapidity of the formation of the cream line decreased at temperatures higher than 141.8 degrees F., but even at 145.4 degrees F. it still was greater than that in the raw milk. At temperatures above 145.4 degrees F. the cream line dropped below that in the raw milk. In all cases up to 145.4 degrees F. the cream line not only formed more rapidly in the pasteurized milk than in the raw milk, but the layer of cream was very much deeper than in the raw milk.

The reason why, in the heated milk, the cream line forms more rapidly and shows a greater depth than in the unheated milk, may be explained by the fact that the heating destroys some of the viscosity of the milk and makes it more fluid. This diminishes the resistance which the fat globules have to overcome in their upward passage. It therefore facilitates more complete separation and permits the fat globules to move upward more rapidly. The greater speed with which the fat globules come to the top in the heated milk also enables them to carry with them larger portions of non-fatty constituents of the milk, further increasing the depth of the cream line. It is a noteworthy fact that in these heated milks the cream line reached its maximum depth in from one to two hours and after that it lost some of its depth, while in the raw milk the cream line formed very slowly and it increased in depth up to the 21st hour. In the heated milk the fat globules came to the top so rapidly and enmeshed so much of the non-fatty constituents that they formed a rather loose cream line which, upon longer standing, due to the force of gravity, packed together more firmly and possibly dropped some of the more loosely held non-fatty constituents.

The reason why the cream line diminishes when the temperature rises above 145 degrees F. must be attributed to the fact that above this temperature there occurred copious coagulation of the albumen. This has a tendency to act like a net-work in the milk, hindering the fat globules from rising to the surface and the contraction of the albumen particles, due to heat, also makes them heavier so that the law of gravity prevents them from being carried upward into the cream line.

The above facts would indicate that 145 degrees F. is approximately the highest temperature that will produce a cream line deeper than that which can be obtained from the raw milk, and that the cream line can be greatly increased by heating the milk to a temperature a few degrees less than 145 degrees F.

Manner of Heating:—But the manner of heating the milk to the desired temperature is quite as important as the actual degree of heat to which the milk is heated and here is where a great many operators unknowingly destroy the cream line. If, in raising the temperature to 145 degrees F. the coil in the vat, or any other heating surface used, is heated to a high temperature such as 180 to 200 degrees F., the milk is affected similarly as if the whole body of the milk were heated to that temperature, the albumen in the milk that comes in contact with the hot heating surface is precipitated and to that extent it hinders the fat globules from rising to the surface and it diminishes the non-fatty constituents which are carried into the cream line. Experience has shown that the temperature of the heating surface should never exceed about 7 degrees F. above the actual pasteurizing temperature.

Manner of Cooling:—Experience has also demonstrated that if the cooling of the pasteurized cream at temperatures between about 70 and 100 degrees F. is greatly retarded or interrupted, it is impossible to secure a good cream line, while, if the cooling to 70 degrees F. or below is rapid and continuous, the cream line is in no way diminished.

The reason here appears to be the granulation or crystallization of the butterfat due to holding the milk at temperatures between the solidification point and melting point of the butterfat for a considerable length of time. When the butterfat granulates or crystallizes in this manner, it relinquishes much of the non-fatty constituents. Crystallization purifies the substance which crystallizes. In this manner the volume of non-fatty constituents which the fat globules are capable of carrying into the cream line is very greatly decreased.

On the other hand, if the milk is cooled rapidly and there is no interruption in the cooling at temperatures between about 70 and 100 degrees F., this granulation does not seem to take place. The fat solidifies but it doesn't really granulate in the sense of crystallization. The fat solidified in this manner incorporates the natural amount of non-fatty constitutents and carries them into the cream line.

This same phenomenon also invariably produces mealy butter in the case of cream when the cream after pasteurization is cooled very slowly and particularly when the cooling is interrupted between about 70 and 100 degrees F., the resulting butter is almost sure to be mealy, and the cause of this again lies in the granulation of the butterfat during the slow cooling process. The granulated and almost pure fat is not smooth and soft and plastic as is the fat which solidifies without granulation and which therefore contains the usual amount of non-fatty constituents. The almost pure fat has a mealy and sandy texture. For this reason renovated butter, which is made from melted fat, recrystallized or granulated, is always mealy and grainy in its texture.

Summary:—Summing up then, it is safe to state that in order to secure maximum depth of cream line from any given batch of milk, the temperature of pasteurization should be held to or slightly below 145 degrees F., the temperature of the heating surface of the pasteurizer should not be allowed to exceed the pasteurizing temperature by more than about 7 degrees F., and the cooling of the pasteurized milk should be done rapidly, particularly from 100 degrees F. down to about 70.

Attention to the above three points makes possible maximum exhaustiveness of separation of the fat, maximum speed of the upward passage of the fat globules, and maximum incorporation in the cream line of non-fatty milk constituents, all of which factors are indispensable in our efforts to secure maximum depth of cream line.

The above factors all deal with the handling of the milk after it arrives at the milk plant. There are other factors which obviously influence the depth of the cream line, which are inherent in the milk and which are not under the control of the factory, such as percentage of fat and size of fat globules, etc. Inasmuch as both of these vary with the breed and period of lactation, they might become the cause of a marked difference in the cream line of milk from factories located at different places, but in the case of factories receiving their milk from practically the same territory, as appears to be the case as cited by your inquirer, these uncontrollable factors would not be apt to have any material effect.

Illinois. O. F. HUNZIKER.

There are various factors which affect the depth and clearness of the cream line in a bottle of market milk. Among these are:

1. Temperature to which the milk was heated in pasteurization.
2. Type of apparatus used.
3. Temperature and time of holding.
4. The amount of agitation to which the milk has been subjected (especially after being heated).

For the best results as to cream line the milk should be heated to not over 145 degrees F. for not over 30 minutes, and even then the milk will have a more or less diminished cream line over the raw milk, depending on the system used. Agitation of the milk, such as is caused by clarifying, pumping, passing through pipes, etc., has a tendency to injure the cream line. Agitation of the milk after it has been heated to the pasteurizing temperature is especially injurious to the creaming ability of the milk. The milk should be cooled immediately after the holding process is over with as little agitation as possible. Where vat pasteurizers are used better cream line results are obtained by the use of a separate cooler. For best results milk should be placed in a cold room after pasteurizing and cooling.

I am unable to say what the depth of the cream line should be in a quart of 4 per cent market milk, both on account of the variations in the milk itself and the types of bottles used.

The Iowa Experiment Station carried on some interesting experiments regarding creaming ability of milk, the results of which are reported in Research Bulletin No. 31. Nessler tubes were used and the depth of the cream line expressed in sixteenths of an inch on a nine-inch layer of milk. A series of samples of mixed raw milk varied from 18 to 28, while the butterfat content varied from 3.3 to 4.1. There was no close relationship between the depth of the cream line and the per cent of fat, and the creaming ability of 1 per cent of fat varied from 4.5 to 6.8.

In regard to the use of viscogen the Iowa bulletin states as follows:

"Viscogen commonly increases the depth of the cream layer of milk and sometimes this increase is an enormous one. The use of viscogen to improve the creaming ability of milk can not be considered as a legitimate method of increasing the depth of the cream layer."

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 3 years, $2.00; Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through news dealers and book sellers in all foreign countries.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $3.00, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of Hoard's Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with businesslike methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Index Ready

The index for the sixtieth volume of Hoard's Dairyman is ready for distribution. Anyone desiring this index may receive a copy upon application. Those who have bound the issues of Volume LX will find them of greater service if they have an index to locate the information it contains.

Declines and Gains in Value of Farm Products

The value of farm crops of 1920 and of the farm animal products and animals sold and slaughtered, as finally determined by the Bureau of Crop Estimates, United States Department of Agriculture, is $19,856,000,000 or $5,105,000,000 below the total of 1919. The drop is almost entirely confined to crops, among which the chief declines in value are: Corn, $1,662,000,000; cotton lint and seed, $1,300,000,000; wheat, $854,000,000; hay, tame and wild, $325,000,000; tobacco, $248,000,000; and oats, $161,000,000.

On the other hand, as many as 10 crops gained in value, chief of which are oranges, with a gain of $32,000,000, and sugar beets, $24,000,000. Other items of gain are cabbage, $11,000,000; cowpeas, $10,000,000; sorghum cane sold and syrup made, $7,000,000. Small gains were made by soy beans, sugar beet seed, maple sugar and syrup, and onions. Apparently, the products of the farm wood lot have gained $223,000,000 in value in the comparison with 1919.

After offsetting gains against losses, the net crop-value reduction in 1920 below 1919 is $4,868,000,000, while only $237,000,000 is found in the total of farm animal products and farm animals sold and slaughtered. The wool decline is as yet unrealized, but it is reckoned at $37,000,000. Of the animals sold and slaughtered, the decline for cattle and calves is $223,000,000, and for swine, $427,000,000. But on the other side of the account, dairy products gained $311,000,000, and poultry raised and eggs produced, $160,000,000.

It is the rule that, in the upward and downward movements of prices, farm animals and animal products lag behind corps. So extreme was the lag in the price of animals and animal products in 1920, on account of the extraordinary fall in the prices of crops within a short period of time, that the total crop value of 1920 is reckoned to be only 56 per cent of the total value of all farm products. In the estimates for a long series of years, this is the first crop value estimate that has fallen below 60 per cent of the total of all products.—U. S. Dept. of Agriculture.

Mississippi Jersey Club

The Mississippi Jersey Cattle Club held its most successful annual meeting in Jackson, January 20th. The breeders were very enthusiastic, from the address of welcome until the last speaker had finished at the banquet.

In his welcoming address, Mayor Scott of Jackson, who is also chairman of the Board of Directors of the Mississippi State Fair, announced that the fair would give $1,500 as premium money this fall if the American Jersey Cattle Club would give $250, and the Mississippi Jersey Cattle Club $250. His proposition was immediately accepted, as the state club felt confident the National Club would give their $250.

The secretary's report showed the Club in good, strong, healthy condition, with a good increase in the number of members. After this report, it was decided that a special drive shall be made to secure new members.

Professor J. S. Moore, of the Mississippi A. & M. College, who knows the good that comes from Register of Merit testing, made a wonderful talk on that subject and said "Our peculiar task of transforming Mississippi from a one crop, all cotton state, to one of the leading dairy states makes a fieldman for the Jersey especially necessary." In commenting upon this, R. C. Vance, representing the American Jersey Cattle Club, made the prediction that Mississippi Jersey breeders have enjoyed their last year of unmolested supremacy. Considerable discussion followed on the advisability of employing a fieldman, the plan being generally favored. The matter was left to a committee.

Officers elected for the ensuing year are: J. C. Matthews, president; James Stone, vice-president; Tom Humphries, secretary and treasurer; and M. J. L. Hoye, George Wheatley, W. P. Long, and W. A. Rogers, directors.

TOM S. HUMPHRIES, Sec'y.

New England Ayrshire Fieldman

The Ayrshire Cattle Breeders' Association of New England has engaged Warren F. Burlingame of Massachusetts as field agent and salesman. He is a product of a New England Farm, a public, high school, and college graduate.

Mr. Burlingame has been engaged to act in the dual capacity of fieldman and salesman. His work as fieldman will cover the usual run of work of the fieldman of a breeders' association; to encourage the breeding and development of the Ayrshire cow. We realize at this time that there are many farmers who are either just entering or contemplating entering the farm, dairy, and breeding business. A surprising and gratifying preponderance of these are looking with favor to Ayrshire cattle. It will be the work of Mr. Burlingame to locate these people; to serve them and cooperate with them to the mutual advantage of themselves and members of the association.

The salesman feature of our fieldman's work we believe to be the first attempt along this line of any breeding association. We believe we are going to bring the buyer and the seller of Ayrshire cattle together in a highly efficient, businesslike manner. It will be the duty of our fieldman, as salesman, to get the breeders to further advertise and place before the public the Ayrshire cow; to see that the many inquiries now received concerning our breed shall increase still more rapidly, and to see that each inquiry is personally followed up and the wants of the inquirer satisfied.

W. GRANT FANCHES, Secretary.

Washington Dairy Notes

HOARD'S DAIRYMAN:—At a meeting of King County Farm Bureau (Washington) recently held in Seattle, preliminary plans were made for a campaign to be conducted beginning the second week in March to induce a greater consumption of milk by country children. Reports from country school districts are said to indicate that a great number of children are underweight because the diet is not suited to their requirements. In the majority of these cases, it has been found, little or no milk has been used. Adding a sufficient amount of milk to the diet has produced beneficial results. It is proposed to bring these facts to the attention of the parents; schools, churches, and other agencies will be asked to co-operate with the farm bureau project leaders in every community. Efforts will be made to induce every family where there are children to make provision for a daily supply of fresh milk.

About 350 farmers attended the second annual sale at New Westminister held under the auspices of the British Columbia branch of the Holstein-Friesian Association of Canada at Queen's Park. Prices generally were not up to expectation.

The annual report of the Guernsey Breeders' Association of Yakima County shows $8,878.49 was spent by the valley breeders for the importation of Guernsey stock during the last year. Sales through the association totaled $11,980. The breeders were well pleased with the report and have made arrangements for an active membership campaign.

At a meeting of the Washington Jersey Cattle Club recently held in Seattle, Mr. E. L. Brewer and R. I. Tanner were appointed to meet representatives from Oregon and California at a conference where the proposal to engage a field secretary for the three states will be discussed. It is believed that such an official would serve to co-ordinate the efforts of the Jersey breeders in these three states.

The Washington Jersey Cattle Club ranks as the second largest breeding organization in the state, numbering over 200 members, owning in excess of 3,000 registered cattle. At the Seattle meeting the following officers were elected: President, Cyrus Gates; vice-president, Mrs. Warren Lincoln; secretary and treasurer, C. A. Phipps; directors: E. L. Brewer, C. S. Griffith, E. W. Trezise, N. C. Sears, and B. A. Grant.

Washington. ALTON D. HURLEY.

Tuberculosis Eradication in Northern Michigan

Plans are under way for a well organized drive against bovine tuberculosis in Northern Michigan. Last August Holstein breeders met at the Loeb Farm where Dr. T. S. Rich explained eradication work for this disease. He discussed the progress then being made in Gogebic County in the Upper Peninsula.

Live stock men in Grand Traverse, Antrim, Charlevoix, and Emmet Counties immediately began plans to make a four county drive against this disease, and at a meeting in September at the Loeb Farm a tentative appropriation of $1,000 was made from each county. At a later meeting it was agreed that in this work each county shall share equally in the veterinary expenses. Many applications have already been made for having herds tested under this plan. Rules and regulations are set forth by the state and federal governments and will be carried out in this eradication so that the herds may be put on the accredited list.

Acid Rations Do Not Affect Milk

Experimental evidence now proves that receivers of milk who have objected to the product from farms where silage is fed, on the claim that such milk is too high in its acid content, have been mistaken. Sulphuric acid has been fed to cows at the Wisconsin Station in addition to their regular ration and no change whatever has been noted in the acid content of the milk. As much as 120 cubic centimeters of strong sulphuric acid has been fed to a cow in one day. This was given with a ration of silage, corn stover, mixed clover hay, and a grain mixture. Under such feeding the milk showed practically a neutral reaction. This is strong evidence that no cow will consume sufficient silage to receive enough acid to give an abnormal acid content to the milk which she produces.

New York Butter Market

NEW YORK CITY, JANUARY 25:—The arrival of shipments of Danish butter aggregating 2¼ million pounds during the past week had a very depressing effect on the market. The effect of the shipments, which were known to be on the water, has been felt since the holidays as there has been a noticeable weakening in all butter markets since the first week in January. While the price decline during the past ten days has been nominal, being about 2c, there has been a very noticeable absence of activity which forbodes other declines. The fact that fully a million more pounds of Danish butter are on the water at present does not engender confidence in the immediate future of the butter market. Unless there is a cessation of Danish butter shipments soon a very decided slump in butter prices must materialize.

Butter dealers were greatly encouraged lately when the Senate Finance Committee incorporated a tariff charge of 8c per pound on foreign butter in the emergency tariff bill pending before Congress. Of late, however, a feeling that the bill will not be passed has developed. However, the present Congress is now considering a permanent tariff bill and indications are that a tariff of six or eight cents per pound on imported butter will be incorporated in the bill. While that will do nothing to relieve the present condition in butter markets, it will undoubtedly prevent an influx of foreign butter into this country later in the year.

Another development of interest to creamery operators and butter handlers is a ruling announced by the federal attorney general on Saturday of last week. The ruling is that butter manufactureed from neutralized cream is an adulterated product and therefor is subject to a tax of 10c per pound. In addition all such butter must be marked and branded, must be put up in tubs containing not less than ten pounds, and all dealers, whether wholesale or retail, who handle that class of butter, are subject to a special tax. The justice of the ruling is a subject for debate and it is very probable that attempts to enforce it will be contended which will undoubtedly result in a great amount of litigation.

Creamery operators are constantly inquiring whether or not the butter dealer has an opinion regarding the prices of butter during the coming spring and summer months. The prevailing opinion seems to be that lower prices than those which have prevailed during those months of the last two or three years must be expected. Few feel that prices will reach a pre-war level because it is thought that it will take several years for the country to reach a normal condition so far as commodity prices are concerned. The importation of foreign butter is a factor which will have a decided bearing on butter prices in this country. It is very apparent at present that Denmark considers the United States a very desirable market for much of its surplus butter. England, however, will take greater quantities during the coming season than during the months just passed, which will undoubtedly reduce the quantities shipped to America. The normal supply of domestic butter is low which makes it seem probable that a strong active market will prevail during the months to come unless the country is flooded with foreign butter.

On Monday of last week, extras were quoted at 51¾@52c. On the following day, an unexpected weakness developed and the price declined ½c. There has been little recovery of strength since that day and occasional declines of ½c materialized until on Monday of this week the low price of 49@49½c was reached. Today, however, there was a little recovery, for some unknown reason, and the price advanced ½c. However, there is a noticeable lack of activity which augurs ill for the price advance. Established quotations today are: Extras (92 score), 50c; higher scoring than extras (93 score or higher), 50½@51c; firsts (90—91 score), 46@49c; firsts (88—89 score), 42@45c; and seconds (83—97 score), 35@40c. W. B. LIVERANCE.

Indiana Dairymen Meet

Resolutions asking that dairy products be put on the list in the emergency tariff measure proposed in Congress and that stringent legislation be enacted to govern the manufacture of substitutes for dairy products were adopted at the annual meeting of the Indiana State Dairy Association held at Purdue University, January 13. The organization also went on record as favoring an extensive educational campaign to encourage the greater use of dairy products. The following officers were chosen:

President, W. L. Hanning; vice-president, W. O. Mills; and secretary-treasurer, C. R. George.

One of the most interesting phases of the meeting of the dairy association was the dairy products banquet. Mrs. Curtis Hodges, a leader in the school lunch work for children in Indianapolis, told of the remarkable results achieved by giving the boys and girls milk in their diet. During November, more than 14,000 children were served daily. The feature of the evening was the funeral of the "scrub bull." Purdue students acted as pallbearers and mourners, carrying in a big black box with the name "Scrub Bull", in white letters, on the side. P. H. Crane read the obituary and W. H. Senour, a live Indiana dairy leader, preached the sermon before the notorious scrub went to his grave. D. B. Johnson, veteran dairyman and present member of the legislature, spoke of the growth of dairying in Indiana. The program closed with a movie of the Gossard Breeding Estates.

The Indiana Jersey Cattle Club held its meeting January 14, and elected the following officers: B. H. Scranton, president; Mrs. M. A. Covode, vice-president; and C. Earl Smith, secretary-treasurer.

P. H. Crane was named president; F. F. Johnson, vice-president; and R. L. George, secretary-treasurer of the Indiana Guernsey Cattle Club.

C. C. Richards was chosen president of the Indiana Ayrshire Breeders' Association, at the annual meeting; O. E. Reed was named vice-president; and L. W. Hart, secretary-treasurer.

Members of the Indiana Holstein-Friesian Breeders' Association elected A. B. Morgan, president; D. V. Whiteleather, vice-president; and H. A. Moss, secretary-treasurer.

Total disbursements	394.76
Balance on hand Jan. 3, 1921	$4,407.88

This is to certify I have today audited the books for George Caven, Treasurer of the National Dairy Union, and find the receipts from Dec. 1, 1920, to Dec. 31, 1920, to be $1,562.82, and the amount paid out for which he holds vouchers, the sum of 394.76, leaving a balance on hand Jan. 3, 1921, of $4,407.88.

F. P. COLLYER, Auditor.

Filled the ice-house yet?

"I couldn't afford not to buy!"

Two farmers were talking over the outlook for this year. "I've just bought a new E-B plow," said one, "and I'm figuring on a new cultivator. Expect to place my order this week."

"What's the hurry?" asked the other. "Do you think this is a good time to buy?"

"Well, I thought at first I couldn't afford them, right now," said the first, "but when I began to think about profits this year I decided *I couldn't afford NOT to buy.* As I see it, there's only one way to be sure of a successful year—to plow and plant as many acres as I can take care of, and make every day count for bigger crops at less expense. That means better implements—tools I can depend on to save me time and do the work thoroughly. The old machines may have pulled me through last year, but they won't stand another season's use."

Can you afford to put off buying this year? It's worth thinking about seriously. Let your E-B dealer show you the time and labor-saving features in E-B tools. You'll see how they can help you farm more profitably.

Bankers and Fertilizers

Bankers are keen judges of what is "good" and what is "bad" in the business of farming. The Federal Land Banks, and bankers in general, consider good fertilizers a sound investment always. The world must have food—a new supply must be grown annually—over-production and low prices one year usually mean smaller production and higher prices the next.

They are quick to recognize the progressiveness of the farmer who, too, reasons it out that way and orders his fertilizers with an eye to the future. It strengthens his credit. It is good business—for him and for them.

And that is the sort of farmer who insists on *good* fertilizers. **A A C** Fertilizers *are* good fertilizers. They are a farm asset that never fails to make farming a better business—each crop a better crop—than it would be without them.

When you use **A A C** Fertilizers you put into your agricultural efforts the results of over half a century of crop and soil study, of thousands of field tests—fertilizers *made right* from the best ingredients the four corners of the earth can provide.

Write for—

A Billion for Highways

(Continued from page 82)

clutch and disappeared down the concrete road at perilously near the speed limit.

More than anything else such a conversation goes to prove that farmers are rapidly changing from the "happy go lucky" methods that they employed a few years ago which in large measure accounts for the growing sentiment for good roads that is spreading over the country. A few years ago the country marveled when E. H. Harriman built a bridge across Great Salt Lake and abandoned the old railroad tracks that bordered the lake for many miles. Mr. Harriman insisted that the saving in time trains would accomplish would be worth more than the money it took to build the bridge. Experience proved him right. The farmer who is willing to make huge investments to save him time is working on the same theory as did the railroad wizard, for in transportation time is money to farmers and railroad presidents alike. Perhaps it would be well to close the case for the farmers at this point and consider the facts turned in by other lines of business.

John D. Nixon owns a bakery and meat market on this Indiana road at the little village of Centerville. "And do paved roads affect your business?" Mr. Nixon was asked. Then followed a snappy talk that would have warmed the heart of any real business man.

"When a paved road goes through a small town the merchant has to show some real pep or he will lose business," is Mr. Nixon's reply, "but if he will really run the business as it should be run he will profit hugely, for paving makes business travel either in the direction of the merchant's own store or to the stores of a livelier competitor."

"But won't business go to a large town in the place of a smaller one?" he was asked.

"It has not been my experience. Centerville, my own town, has a population of 1,000. Richmond, only eight miles from me, has 30,000. Earlham College, which has seven or eight hundred students, is right in the edge of Richmond and a Richmond baker used to furnish bread to the institution. I got the contract on a basis of service—took it away from the bigger town. Very often when a meal is beginning and the steward is afraid there will not be enough bread to serve, he 'phones me and I get there before the students are ready for dessert. I travel seven miles to get there but I couldn't give that service over any bad roads. Incidentally that single contract with Earlham College amounts to more than $500 a month." That very morning Nixon had taken his car and trailer and gone out into the country. He was in search of beef—found what he wanted and was back at his place of business in two hours. He figured that on that particular trip he had made $34 because of being able to fill an order on very short notice. The farmer was paid a good price for the beef and every one who had a part in the transaction was satisfied.

If you will ask the questions, Will the money come back? Will it be both principal and interest? Does paving pay? you will get from the community a single reply "It does," and they stand ready to prove out of their own experience that it does pay them.

Approximately 4,320 acres of land were restored to the Government during the last fiscal year, as a result of land-claim cases handled by the Office of the Solicitor for the United States Department of Agriculture. The timber stand on this land is estimated at 22,235,000 feet, valued at $88,840.

SOW SALZER'S SEEDS

And especially, sow the seed of hay and forage crops that has passed the Salzer test for purity, vigor and freedom from noxious weeds.

These are the crops, which more than any other, depend on the care of the seedsman in selecting fertile seed that is true to type, and in the thoroughness with which that seed is cleaned and recleaned. You can trust us on both these points. You can not possibly get any seed that will grade higher in any respect than that which we send out to our customers.

We are American Headquarters for Field Seeds, particularly the following:

Alfalfa, Clover, Timothy, Sudan, White Sweet Clover, Billion Dollar Grass, Grass and Clover Mixtures, Corn, Wheat, Oats, Barley and Potatoes.

We are also headquarters for vegetable and flower seeds for home and market garden. Our trial and propagating grounds at Cliffwood are equipped with almost every facility known to the science of seed improvement. This advantage enables us to guarantee all vegetable and flower seeds to be satisfactory to you in every respect, or we will refund full purchase price.

Write for new catalog showing hundreds of Salzer's Choicest Strains in true colors. A postcard will bring it.

Dairying Thirty Years Ago

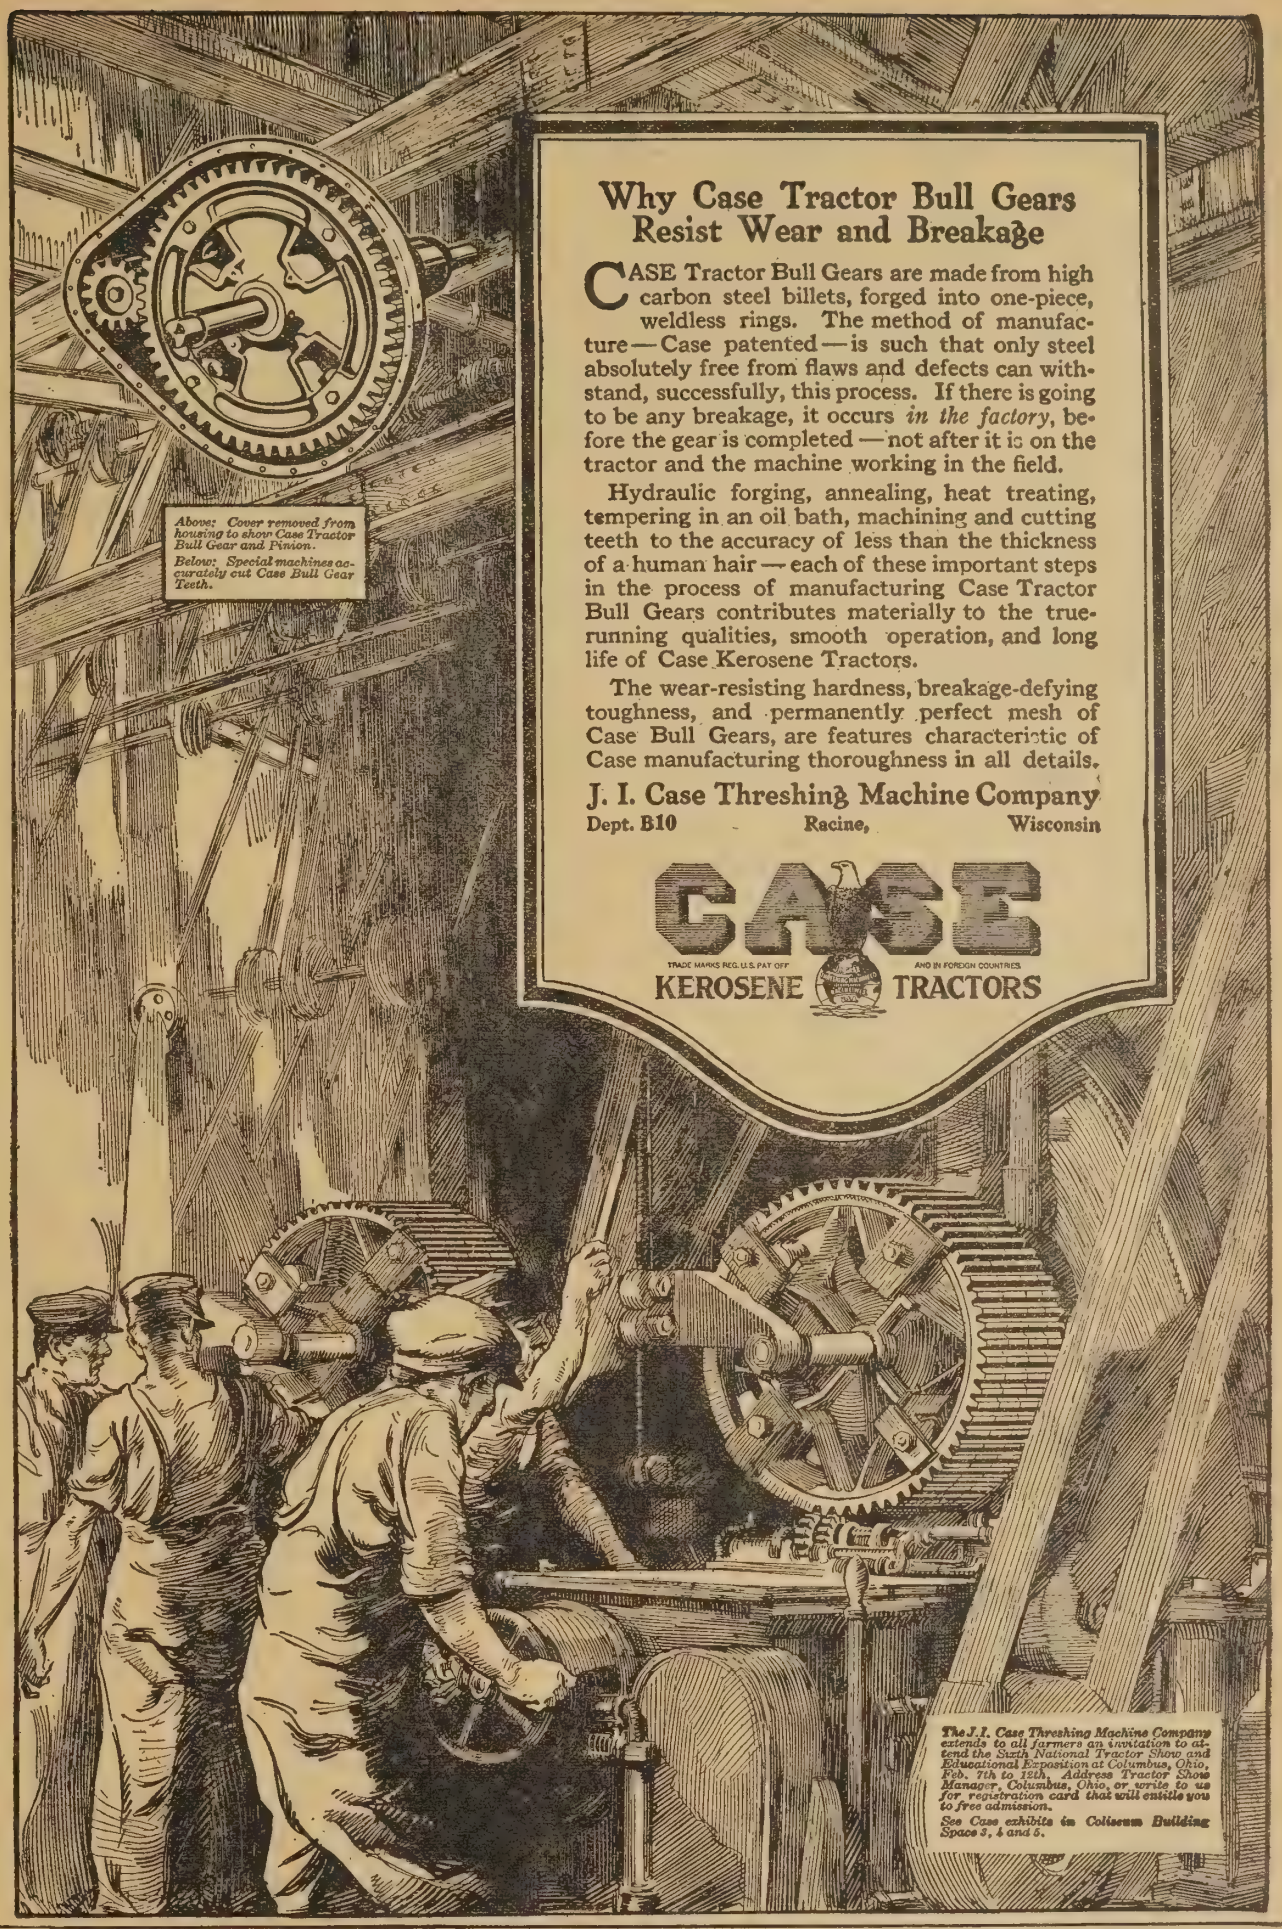
Taken from the Issue of Hoard's Dairyman of February 6, 1891

We, this week, present the Dairyman to its readers "dressed", as the printer says, in new clothes. Happily we have made the exchange, and trust the new type may have excellent "staying" qualities; for we have an ambition to make the impression of our types on our paper as bright and clean as the character of the reading is truthful, elevating, and helpful.

⚜

E. A. H., of Galena, Ill., asks if a cow will give more milk for a period, say, of four years, if she is allowed to have a calf as often as possible. Our own judgment is that cows should be bred regularly once a year, and given at least 60 days' rest from milking service. Handled in this way, with wise care and feeding, we believe a cow will make the largest possible use of herself. Of course, cows differ individually in talent the same as men, and often have a stubborn way of doing just as they have a mind to. Some cows rarely dry up, but milk right along from one calving to another. Every dairyman, when he breaks a heifer, should have a care to make of her a long season milker by milking her the first and second season up to within 60 days of calving. This will establish a milking habit which has a great deal to do with the amount a cow is to give in a year.

⚜



At a recent meeting of farmers, in California, a sensible lecturer said: "Mind is more than muscle. A mule has four times the muscle of a man; use the muscle of the mule. I was in St. Joseph, Michigan, and saw asparagus for sale. One lot was roughly put up in boxes to be returned. Another in neat white boxes, which did not cost half of the other, was put up in bunches, tied by red tape in neat bows, tied no doubt by a woman, and brought 40 per cent more, cost less than the other." Curiosity led him to the home of the man and found him doing less hard work and showing more general prosperity than his average neighbors. "I also knew a milk dealer who kept an account with his cows, each having a separate account, and the cow that did not show a profit was sold to the farmer who did not keep books." He asked all the farmers present who kept farm accounts or even a cash account to raise their hands. Not a hand was raised.

Dairy Markets

Elgin, Ill., Feb. 2, 1891—Market quiet 25.

New York, Jan. 21—Butter—It is difficult to give shippers a clear idea of the condition of affairs here during the week just closing. At the close a few Elgin marks are exceeding quotation in a regular way 27 cents. Extra Iowa, etc., is slow at 19 cents, and choice marks of Iowa and Nebraska are offering quite freely at 16½@18c. Cheese—The market has shown a slight hardening tendency on nearly all grades and the business of the week has been quite satisfactory. To home trade 10¼ cents is a very general price, with some small lots reaching 10⅜c; fine factories are selling at 9¾@10c; and good to prime at 9¼@9½c; small size full cream of fancy quality are firm at 10½@10¾c; fine Chenango Co. part skims reach 9c and choice lots are firm at 8@8½c; Ohio flats in demand and fine lots bring 10c.

There just doesn't seem to be any place in this efficiency-demanding age for the scrub—hen, cow, tree, or folks.

Why Case Tractor Bull Gears Resist Wear and Breakage

CASE Tractor Bull Gears are made from high carbon steel billets, forged into one-piece, weldless rings. The method of manufacture—Case patented—is such that only steel absolutely free from flaws and defects can withstand, successfully, this process. If there is going to be any breakage, it occurs *in the factory*, before the gear is completed—not after it is on the tractor and the machine working in the field.

Hydraulic forging, annealing, heat treating, tempering in an oil bath, machining and cutting teeth to the accuracy of less than the thickness of a human hair—each of these important steps in the process of manufacturing Case Tractor Bull Gears contributes materially to the true-running qualities, smooth operation, and long life of Case Kerosene Tractors.

The wear-resisting hardness, breakage-defying toughness, and permanently perfect mesh of Case Bull Gears, are features characteristic of Case manufacturing thoroughness in all details.

Drying Destroys Vitamines

It has been shown that the drying of any food partially or completely destroys the particular vitamine which is effective in preventing and curing scurvy. Experiments by the Wisconsin Station prove that milk powder made by spraying milk into highly heated air has lost that vitamine property, while that powder which is dried by the drum process is not altogether without this vitamine value. This would indicate that the vitamine is not destroyed by the drying process so much as through oxidation and that if drying processes can be conducted in the absence of oxygen, the chance for preserving this particular vitamine is very much greater.

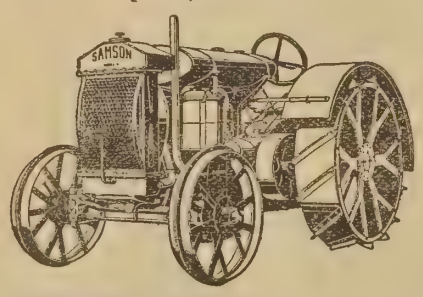
Lower Operating Costs

The big problem confronting the business farmer today is "How can I lower my operating costs?"

To this there is only one answer, "Power Farming." You or your father answered it the same way when the scythe was discarded for the mower and reaper.

Two years ago you did not have to answer this question because you could make money no matter how expensive the old methods. But next year's crop costs will have to be figured on an efficient production basis, the same as any other manufacturer. Samson power points the way out.



The Samson Model "M" tractor, by displacing horses, saving feed and other expenses, as well as hired belt work for silo filling, threshing, etc., will pay for itself the first year. It will give you not only a better and easier means of doing your work but it will cut down your cost of production the same as it has that of your farmer competitor.

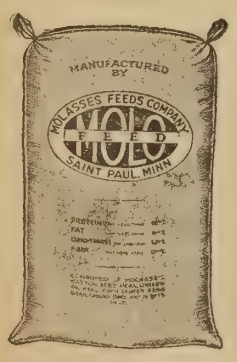
Nearly two hundred thousand farmers have purchased tractors during the past year and through use of this power, which is less costly than horsepower, have saved money, time and labor. The tractor will do for you what it has done for them.

Your business rests with you. It is a question of profit or loss. You, as a business farmer, can not afford to operate at cost or at a loss. You must make a profit. Competition is as strong on the farm as in any other business. Power farming with a Samson Model "M" tractor is your salvation.

Don't delay the introduction of power methods. Your profits start the minute you put a Samson Model "M" tractor on your farm—not only in your field work, but in the operation of all your belt-driven machinery.

Get ready for your spring work now.

Write Us For All The Facts



Sit down now and write us to send you new information which we have gathered that will enable you to lower your production cost and increase your margin of profit. A postal card will bring it, no obligation. Write us today.

Blancher's Notes

Patrons Buy Milk Plant—The Taylor Center Loope Creamery of Cortland County, New York, which has been controlled and owned by A. H. Loope for over twenty-one years, has just been sold to the patrons who will operate it under co-operative plans.

A charter has been issued by the state department of Albany to the McLean Co-operative Milk Products Company, Inc., of McLean, New York. George Fitts, state fair agricultural commissioner of McLean, Hobart Mineah, and O. G. Hemingway are the new directors for the first year.

High Record for Holstein Cow—A pure-bred Holstein cow owned at Merryall Farms, Pennsylvania, the past month gave 2,388 lbs. of milk testing four per cent fat, or 95.5 lbs. of fat. This cow was milked three times each 24 hours, and was fed ensilage, Unicorn Dairy Ration, and mixed hay. C. W. Newman is the proprietor of Merryall Farms, and is known throughout the state for the fine herd of Holsteins which he has developed there.

Scarcity of Bulls from Accredited Herds — Pennsylvania is forging ahead in the accredited herd plan in a surprising and pleasing way, but although many farmers have accredited herds, or have started on the accredited herd plan, Susquehanna County, one of the foremost dairying counties of the state, shows a startling lack of good bulls. Recently a buyer was in that county in search of a bull from an accredited herd, but could find none for sale. The next best thing was to refer the buyer to a herd that had passed one test. Not long ago there was a man in the county in search of a carload of cattle from accredited herds, and price was a secondary matter. Enough cattle could not be found to fill the order. The cattle were finally bought in Tioga County.

Milk Question Discussed

Plans for distribution of milk on a co-operative basis were discussed at the meeting of the New York State Agricultural Society in Albany, January 18 and 19. The scheme is fathered by the Dairymen's League which would place the League not only in control of the state's supply, but of its distribution as well, if the plan is adopted.

Those opposed to this program said it would tend to increase the cost of milk in New York and other large cities; that farmers cannot combine successfully on a cost-plus basis.

The League's pooling proposal was explained by Thomas E. Milliman, organizer of the League. He said that of the 98,000 members of the organization, one-third have signed contracts to place their milk in the hands of the co-operative association proposed by the League to act as a sales agency in distributing the milk.

P. D. Fox, president of the Borden Farm Products Company, defended the distributors and branded as unsound the plan fathered by the League. He asserts that "the distributor is not a middleman", declaring that he has direct contact with the producer and consumer. "These suggestions," he said, "are born of impractical knowledge of the business attacked and condemn a system made practical and efficient by years of study. This is detrimental, not alone to the distributor, but to every one associated with him, including the consumer."

Mr. Fox stated that milk distribution in New York City, at least, is

An Easy Way to Remove Afterbirth

If you want your cows to be healthy and productive, by all means see that the afterbirth comes out in a natural way, for the infection will injure the animal's health if you don't.

The best way to get rid of a retained afterbirth is to let B-K promptly reduce inflammation, suppress infection, destroy foul odors, soothe and heal torn tissues and permit the afterbirth to come away without assistance.

If treatment is given promptly, the case will respond at once. If delayed, infection advanced, foul odors present, etc., then the first two or three applications should be stronger.

Your cow will not be injured or torn in any way, as she will be if you try to remove this afterbirth by the unnatural hand method. B-K prevents infection and leaves no part to decay. Sold by dealers in your town.

made in an economical manner. C. W. Burkett, editor of the American Agriculturist, took exception to Mr. Fox's statement. Mr. Burkett said the number of delivery wagons could be considerably reduced and a large saving effected in the overhead cost of delivering milk if the routes were extended.

Mr. Burkett said, "The average delivery in New York City from each wagon is about 300 quarts. When I worked in the dairy business I often delivered 300 quarts of milk in the morning and 300 quarts at night and did quite a day's work in between. In New York they now deliver 300 quarts and call it a day—at least some of them do this. The trouble is that there is too much organization. Take in Philadelphia, for instance, the average delivery route distributes from 400 to 500 quarts. The reason for this is that the milk delivery men are unorganized in Philadelphia and organized in New York."

E. M. L. BLANCHER.

Pennsylvania.

North Dakota Dairymen to Meet

The North Dakota Dairymen's and Buttermakers' Association holds its 27th annual convention at Jamestown February 8, 9, and 10. In making this announcement, J. J. Osterhous, secretary of the State Association, draws attention to the progress which North Dakota is making in the production of dairy products. During the last year world records in butterfat production have been made in that state by each of three of the leading dairy breeds. Owners of these world record cows will address the convention.

Minnesota Dairymen's Convention

The 43rd annual convention of the Minnesota State Dairy Association was held at Fergus Falls, January 18, 19, and 20. A pleasing feature of the meeting was the dedication of the new creamery building, in which the association held its convention. It is estimated that about five hundred dairy farmers attended.

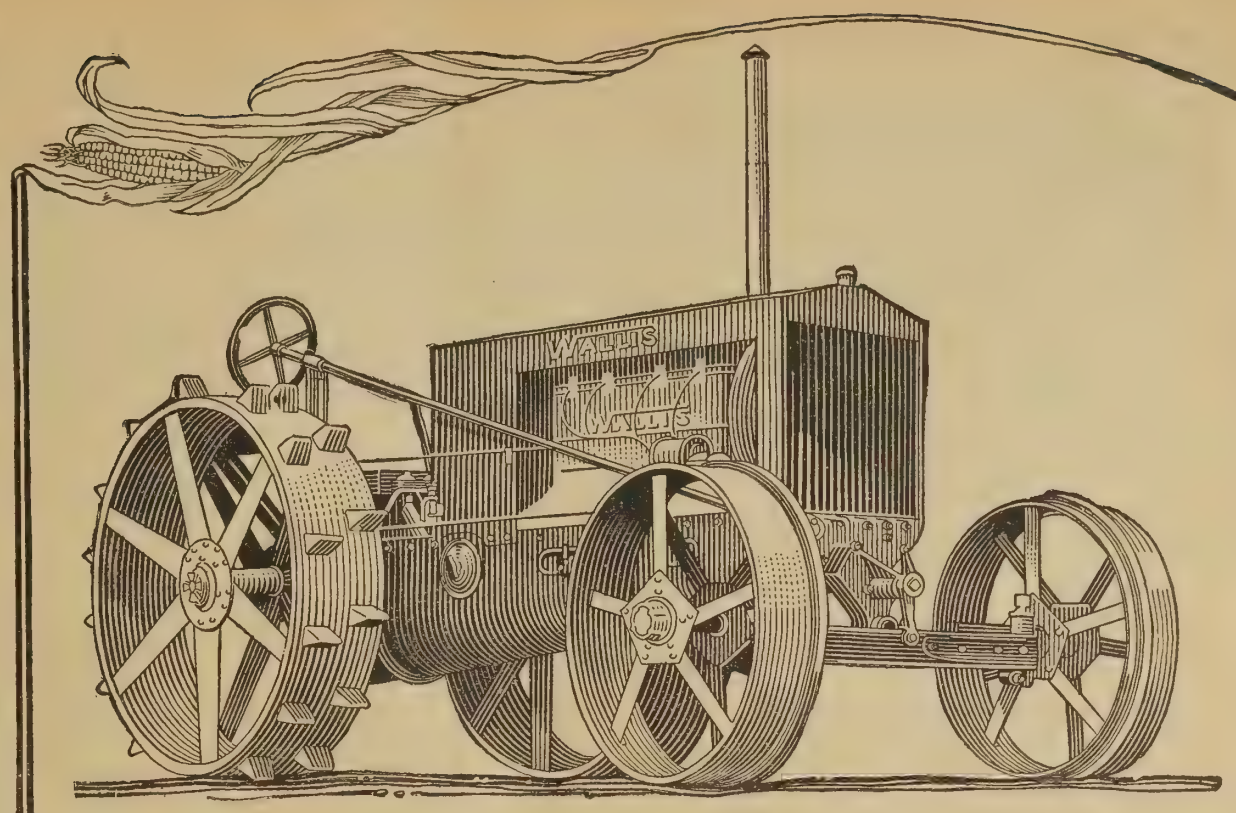
In his address as president, J. P. Grout spoke of present agricultural conditions and indicated that there can be no real prosperity of the nation until those who produce the nation's food supply are prosperous. Speaking of the heavy decline in prices of agricultural products, he called attention to the fact that butterfat is one that has not suffered a serious decline. He spoke of the rapid growth of dairying in Minnesota and of the high quality of butter produced in that state as indicated by the great number of prizes which have been won by its product in public competitions.

Dr. C. P. Fitch spoke on the topic, "Live Stock Sanitation", giving chief attention to tuberculosis and contagious abortion. He stated that there is no specific remedy for either of these diseases, but that cleanliness, proper sanitation of barns, proper feeding, and plenty of fresh air go far toward eliminating both. He strongly advocated the testing of all cattle for tuberculosis and stated that the tuberculin test, while by no means infallible, is accurate in at least 95 per cent of the cases. He stated that Minnesota has more tuberculosis-free herds than any other state, owing to the fact that it was one of the first to take an interest in testing and proper sanitation.

James Sorenson, secretary of the Minnesota Creamery Operators' and Managers' Association, explained the work of this organization. He showed that its purpose is to improve Minnesota dairying. While it puts forth effort to see that its members are well paid, it is equally as anxious that every creamery should be given good service. He stated that the association is anxious to see that poor creamery operators are replaced in the creameries of the state.

Dean R. W. Thatcher of the Minnesota University spoke on the further development of Minnesota's agricultural resources. He advised that more advertising should be done, using the Sunkist orange advertising as an illustration of the benefits that can be derived through publicity. Secretary Chris Heen reported that the cash receipts of the association for the past year were $6,559.14. This included a balance from last year of $693.34, from state appropriations, $5,000; and memberships, $719. The expenditures for the year totaled $5,851.57, leaving a cash balance of $707.57. The association has furnished speakers for fourteen different meetings during the past year, at which approximately 2,600 people were addressed.

Officers elected for the coming year are: President, L. Jensen; first vice-president, Arthur Mitchell; second vice-president, J. J. Bopp; secretary, Chris Heen; treasurer, J. P. Jack.



Resolutions were adopted urging continued liberal support of the National Dairy Union, increased interest in the Dairy Council, continued co-operation with the Minnesota Creamery Operators' and Managers' Association, the adoption of regulations declaring that commercial butter shall contain 80 per cent or more of butterfat, endorsing compulsory pasteurization of cream for creamery butter, and commending the work of the Dairy Division.

In the butter scoring contest, 224 entries were made. C. S. Gustafson and James Sorenson acted as judges of butter. Earl A. F. Paulson was given the highest score of 96, H. H. Lunow receiving 95½ and Chas. W. Gamith 95¼. C. G. Strombeck took first prize with American cheese with a score of 95 and Leo Von Arx received a score of 93 on Brick cheese.

Jersey Cattle Notes

For week ending Jan. 14:

Number of animals registered: Bulls, 162; cows, 539; total, 701. Number of transfers recorded: Bulls, 175; cows, 596; total, 771.

WALLIS—International Champion

Once again has the Wallis Tractor offered convincing proof that Wallis power means "more acres per hour." In the great international demonstration held recently by the ROYAL AGRICULTURAL SOCIETY OF ENGLAND, the Wallis performed with such thoroughness and power that it was awarded the FIRST PRIZE AND GOLD MEDAL in the three-bottom plow class. The trials lasted seven days and covered every phase of field and belt operation.

The leading English engineering journals, commented very favorably on the constructional features of the Wallis—AMERICA'S FOREMOST TRACTOR. Its sturdy strength, light weight and remarkable pulling power were commended. The famous Wallis U-shaped frame, made of one-piece boiler steel, was the object of especial approval among the judges and engineering experts. The low-speed, heavy-duty motor; compact, dustproof construction, and non-friction bearings, were other features that received high praise. Wallis was accorded unquestioned leadership in the three-bottom plow class.

"More Acres per Hour" is built into every vital part of Wallis. Thousands of farmers throughout the country have increased their production and lowered their costs with the Wallis. Its great power and trouble-free performance add many dollars to the value of the crop. A visit to the nearest Wallis dealer will convince you of the merit of Wallis.

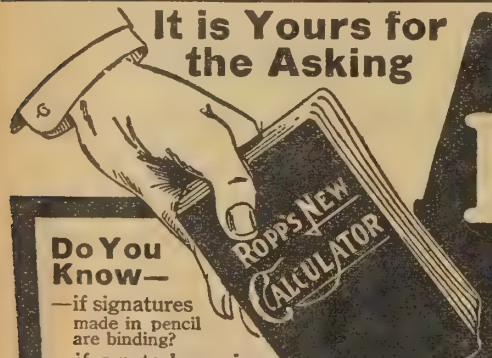
MULE-HIDE "NOT A KICK IN A MILLION FEET" ROOFING AND SHINGLES Reg U.S. Pat Office

Mule-Hide Ideas and Ideals

Fifteen years ago MULE-HIDE Roofing came into existence. Today—after fifteen years of service, the first MULE-HIDE Roofing is still proving its fitness.

MULE-HIDE has never been sold on price, rather it has been the aim of its makers to reduce its price through longer service. Millions of feet of MULE-HIDE Ready Roofings and Asphalt Shingles now in use prove the meaning of MULE-HIDE'S service record—



"Not a Kick in a Million Feet"

Go to your dealer; ask him to submit MULE-HIDE to any test you may select, and you, too, will be led to purchase, for its longer life, this never varying product.

MULE-HIDE Smooth Finish Roofing.

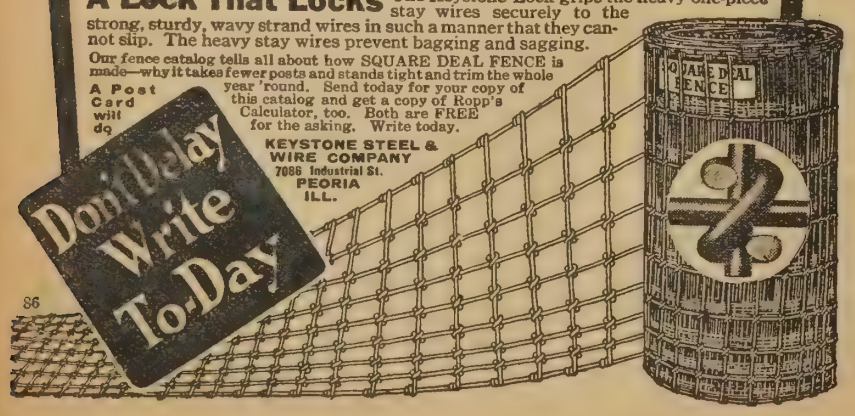
2 Big Necessities FOR EVERY Farm

Your name and address on a postal will bring to you postpaid, Ropp's Calculator which answers all the above questions, tells how to compute crop values, measure land, find capacity of barrels, bins and barns, figure interest and wages and gives thousands of other facts in a jiffy. We will send every farm owner a copy of this calculator free, along with our latest catalog on

Square Deal Fence

It is the fence of permanency and protection and not a mere boundary marker between fields. Made of materials more than equal to all the demands placed on them. Rust-resisting, rigid, durable and perfect in construction. SQUARE DEAL FENCE always lives up to its name. Endorsed by thousands of users, everywhere.



A Lock That Locks The Keystone Lock grips the heavy one-piece stay wires securely to the strong, sturdy, wavy strand wires in such a manner that they cannot slip. The heavy stay wires prevent bagging and sagging.

Our fence catalog tells all about how SQUARE DEAL FENCE is made—why it takes fewer posts and stands tight and trim the whole year 'round. Send today for your copy of this catalog and get a copy of Ropp's Calculator, too. Both are FREE for the asking. Write today.

Dr. Emerson and Milk Facts

STILL greater evidence is now at hand to show the wonderful value of milk. This evidence comes from the results of experiments conducted by the great authority, Dr. Emerson of Boston, in conjunction with the city schools of Chicago, the McCormick Memorial Institute of Chicago, and the National Dairy Council.

Thousands and hundreds of thousands of boys and girls have been found, on careful survey, to be physically unfit and mentally unreceptive to school work.

Chicago schools show approximately 33% of their boys and girls as being 7% or more below normal weight. This condition naturally reflects on their school work.

When Dr. Emerson first went into the Chicago schools and picked out several dozen boys and girls, the worst he could find, who were in many cases 25% to 40% below normal, many thought he had hopeless cases. But he didn't. He knew the reason for the condition of these children and he knew the way to bring them up and "over the top". Strange but true, these children were from well-to-do families; in many cases the child was the only one in the family.

Dr. Emerson is emphatic in saying that less than 3% of the cases of malnutrition can be traced to poverty, the 97% being the result of sheer neglect and ignorance on the part of the parents.

The children were immediately placed under supervision, and each given at least a quart of milk a day. Some were required to have mid-day lunches, properly prepared. Every child was weighed regularly, a record was kept, and a graphic chart showed how far each child was below normal when he began and how rapidly he gained and finally reached normal. The results were astounding.

One case was a boy, weighing 86 lbs. while he should have weighed 134 lbs., who became normal, going "over the top" in thirteen weeks. Most of the children went over in six to eight weeks. Occasionally their progress was stayed by some physical defect or disease—such as diseased tonsils, which, when removed, allowed the children to continue gaining.

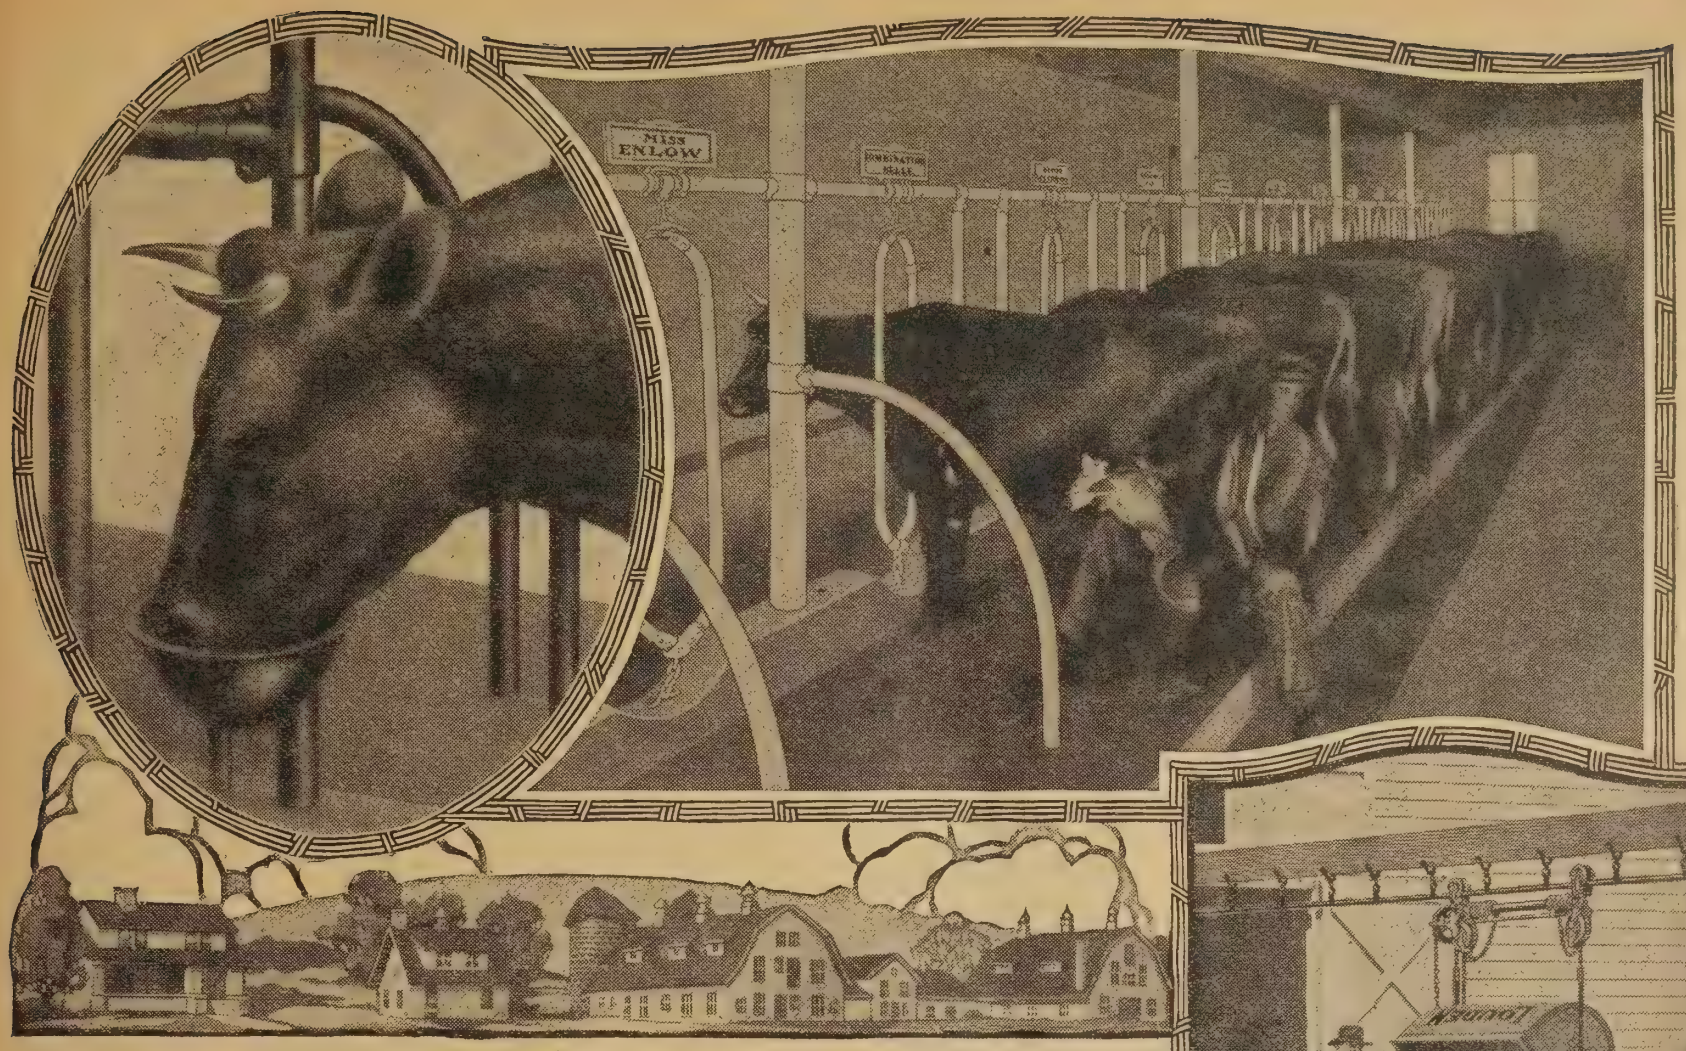
All this, says Mrs. Ira Couch Wood, in charge of child nutrition work conducted by the Elizabeth McCormick Memorial Institute for the McCormick Memorial Fund, resulted in a similar increase in school efficiency; the children studied better, they were really interested, they grasped the work more rapidly, and they displayed alertness of mind never before manifest. Indeed, it was an inspiration to see them unfold; once so listless and dull, now so apt and eager.

And to think there are 6,000,000 such children in this free land of America today—children who could be "shining lights" and who could be a power for civilization—but who are held down by the iron hand and submissive power of ignorance.

SCHOOL CHILDREN BEING WEIGHED

Proper food means healthy boys and girls. Health is wealth, and health belongs to every child in this land today.

Milk is fundamental. It is also economical (for 1 quart is equal to 8 eggs in food value). Then why not use it? If it were put up in medicine bottles, it would sell for a dollar a bottle, and there would be no end to the demand for this vital food. The Milk Way is the Health Way—Follow it. Dr. Emerson has found that milk is indispensable.—NATIONAL DAIRY COUNCIL.



Maine Creamery Reports for 1920

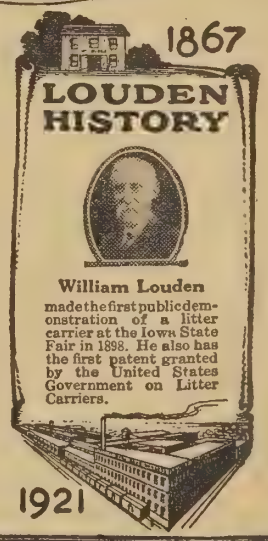
The annual meeting of the Skowhegan Jersey creamery was held at the creamery office at Skowhegan, Maine, January 8. The secretary's report showed an increase of business of 10 per cent over last year, total receipts for the year being $302,786.58. The pounds of butterfat received and paid for at an average price of 75 cents per pound were 351,084.1. Twenty-six thousand, four hundred thirty-six pounds of butter were made, this being less than 8 per cent of what it would have been had all the product been made into butter. The balance or 92 per cent of the product went to market in the form of sweet cream.

Lester H. Packard, who has been one of the directors the past year, was elected president. The other directors elected were: T. D. Salley, Elmer B. Rowell, Lindley F. Parsons, and L. L. Sanford. Elmer E. Harris was re-elected secretary and treasurer. This present month terminates his twenty-sixth year of service in the creamery, having served as its secretary and treasurer for twenty years.

The matter of installing a cold storage system was discussed thoroughly and it was thought best to defer the matter for one year at least, in view of the extreme high price of material and machinery necessary for such an outfit. Steps will be taken at once to establish a branch in Boston for the purpose of giving better service to the customers. As soon as possible machinery will be installed in the creamery for the purpose of making ice cream in all its forms.

Maine. ELMER E. HARRIS.

Saving Time for a Million Farmers



TIME is money. This is more true of the farmer than anyone else. Your trouble is to find time to do all the things you want and ought to do. For over fifty years we have been working out ways for the farmer to save time in his daily barn work. And the saving of more than half the barn work that Louden Equipment makes possible does far more than cut the expense of barn work in two—it takes the backache and drudgery out of barn cleaning, feeding and watering stock—gives you a sanitary barn and greater milk production from your herd. For a few cows or many—for a big barn or a small one—we have the equipment that meets your needs and which you can install yourself without trouble. It begins to show a surprisingly big profit the day you put it in. And don't overlook the fact that Louden Equipment

Works for You Every Day in the Year

Louden Cow Stalls and Swinging Tubular Stanchions give the cows genuine pasture comfort—cows are free to turn around and card themselves—they can sleep as they would out in the pasture, with their heads nestled up against their body. Louden Stalls and Stanchions make it easy to keep the herd clean, saving much disagreeable work, making more sanitary conditions, and insuring a better quality of milk. And the Louden Built-Up Manger Curb, which saves so much feed, can be used only with the Louden Stanchion.

Louden Quick Detachable Water Bowls not only save all the labor of watering the cows, but still more important, they *increase the milk yield from 25 to 40%*. A lift of the hand takes them off or puts them on—simple and easy to keep clean. Insures a constant supply of fresh, even-tempered water—a big paying investment from every standpoint—for few cows or many.

The Louden Litter Carrier takes out the equal of five wheelbarrow loads of manure each trip—takes it clean without dripping or scattering—takes it away from the entrance and dumps it. Operates so smoothly that a 12-year-old boy finds the job a pleasure instead of the usual drudgery. Does away with slopping around the barnyard in slush ankle-deep during bad weather. Made in different sizes to meet any farmer's needs. One of the greatest labor savers ever built for the farm.

Get These Two Books—No Charge—No Obligation

The Louden Illustrated Catalog—224 pages—tells all about full line of Labor Saving Barn Equipment—Stalls and Stanchions, Litter and Feed Carriers, Water Bowls, Animal Pens, Hay Unloading Tools, Power Hoists, Barn and Garage Door Hangers, Hog House Equipment, Cupolas, Ventilators—"Everything for the Barn." Don't fail to get this book—it's yours for the asking—you will find an equipment that exactly meets your requirements.

Going to build or remodel a barn?—we can be of great service to you. If you will give us some idea of what sort of barn you have in mind, number and kind of stock you wish to house, we will gladly work out and send you, without charge, suggestive plans to best meet your particular needs. Also the Louden Barn Plan Book showing many styles and sizes of barns, with detailed information on every phase of barn building. It will save you trouble and money and costs you nothing.

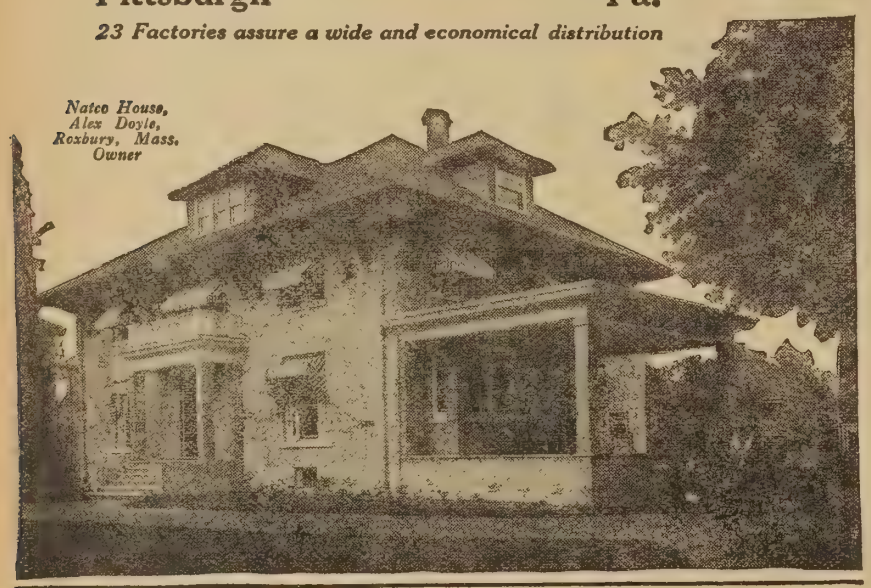
Wood is Scarce—Coal is High
Build a WARM House

WITH the winter winds howling and the cold creeping through the thin weather-boards, the family in grandfather's boyhood hugged the stove a little tighter, while someone fetched another armful of wood. But today, firewood is fast disappearing and the cost of coal climbs steadily higher. The remedy is a ***warm*** house—built of

Natco XXX Hollow Tile used in walls that are stuccoed.

Natco Hollow Tile



The still-air spaces in the walls resist temperature changes and prevent dampness. These walls require no painting and will not burn or decay. The saving in coal bills, upkeep and insurance make a Natco House cheapest in the long run.

Our *free* book, "Natco on the Farm," describes Natco buildings of many types. Write for it today.

Michigan Breeders Meet

The Michigan Improved Live Stock Breeders' and Feeders' Association met at East Lansing, Michigan, January 12th and 13th. Special meetings were also held by the various breeders of cattle, horses, swine, and sheep. A very commendable feature was the meeting at 5 o'clock in the afternoon of all the breeders, where brief reports were given of what was accomplished at the special breeders' meetings. We consider this a good practice as it gives opportunity for every breeder to know the problems of his fellow breeder. It is also well for the breeder of dairy cattle to know the status of the sheep, the beef cattle, and the swine industries. It did not require much time to review conditions but it gave every breeder a better understanding of the problems of the live stock industry.

The subject of eradication of tuberculosis was discussed by Mr. H. R. Smith of Illinois before the general meeting of the Michigan Improved Live Stock Breeders' and Feeders' Association. Mr. Smith pointed out why concerted effort was being made by the federal and state governments to secure adequate appropriation for an effective campaign against bovine tuberculosis. Last year 3,000 cars of hogs went to the rendering tank which incurred a loss of 15 cents per 100 on all the pork sold. He estimated that the loss from tuberculosis last year amounted to $40,000,000 and figured that this could be reduced from three to five millions if proper funds were provided. Congress is being asked for an appropriation of $3,000,000 and the states are asking their legislatures to appropriate at least this amount. The entire appropriation will amount to about one-sixth of the cost of one of our battleships.

Instances on record show that tuberculosis can be eliminated where proper plans and practices are put into operation. Ten years ago the District of Columbia started to test its dairy cattle and found 18% of them suffering from tuberculosis. Last year only three animals responded to the tuberculin test. Mr. Smith also pointed out that tuberculosis is on the increase, for in 1902, 2% of the hogs showed lesions and in 1920, 11% showed lesions. He believes that now is the time to strike vigorously for if this disease continues to run its course the losses will be much greater.

Mr. W. L. Houser, President of the Wisconsin Breeders' Association, described the pure-bred campaign which is being carried on in Wisconsin. He showed how the children in rural schools were used for taking the census of pure-bred bulls and how this interested them in breeding and developing better animals. He stated his surprise to find in one of the leading counties of Wisconsin that had developed a world's champion Jersey and a world's champion Holstein that on taking the census of that county only 27% of the bulls used were pure-bred and the rest were grades or natives. This shows the necessity, even in the most progressive dairy counties, of carrying on a systematic campaign for educating the dairy farmer to the value and importance of using pure-bred sires.

Mr. R. R. Graves of the Dairy Division discussed the subject of potency in animals. In the selection of an animal to head a herd of cows he urged breeders to look more to the calves and not so much to the sire. He pointed out the necessity of studying the records of the bull's ancestors in order to determine whether the animal had in his blood desirable characteristics to be transmitted to his offspring. He illustrated this point by using Countess Prue, the world's champion Guernsey, as an example. He showed she was no accident and that sixteen of the cows closely related to her have 20 records with an average fat production for a year of 642 pounds. When a bull is found of the proper breeding and shows the ability to transmit his good qualities to his progeny, then inbreed to fix these desirable characteristics.

Mr. L. Whitney Watkins, in discussing a better market for live stock, stated that the dairy industry had suffered by keeping too many poor cows but he hoped that through the county agent and the farm bureau farmers would be led to see the necessity of eliminating the poor cow as well as the poor scrub. He believed that now was the time to strike a strong blow at bovine tuberculosis and favored appropriations from the legislatures and federal government that would give proper financial support in carrying on this work.

January Milk Prices

The following table from the U. S. Bureau of Markets' report presents a comparison of the net prices received during January by producers for fluid milk (test 3.5%) f. o. b. local shipping points or milk plants operated by fluid milk dealers:

Sections	Range of Jan. prices per cwt.	Comparison of average prices 1920 Dec.	1921 Jan.	1920 Jan.
United States	$2.03—$5.23	$3.50	$3.25	$3.82
New England	3.50— 4.85	4.27	3 89	4.20
Middle Atlantic	2.65— 4.04	3.31	3.30	3.77
E. North Central	2.10— 3.92	3.51	2.77	3.71
W. North Central	2.03— 3.86	3.33	2.93	3.59
South Atlantic	2.67— 5.23	4.15	4.05	4.19
E. South Central	2.23— 4.45	3.50	3.34	4.08
W. South Central	2.76— 4.36	3.98	3.59	4.51
Mountain	2.27— 3.47	3.04	2.88	3.16
Pacific	2.32— 4.41	3.57	3.37	3.66

Producers' and Consumers' Prices

The following table shows for certain representative city markets the prices of standard grade milk (Grade B, test 3.5%) received by producers f. o. b. city and paid by consumers during the month of January:

	Producer receives per cwt.	Consumer pays per qt. Cents	Butterfat allowance per lb.*
Birmingham, Ala.	$4.87	20—25	
San Francisco, Cal.	4.04	15—16	$ .29

HOOSIER SILO CO.
Dept. D86 Albany, Ind.

When writing advertisers please mention Hoard's Dairyman.

are made for butterfat content but the milk must not be lower in test than legal requirement and must not be adulterated or skimmed.

The prices quoted for producers are for milk testing 3.5 per cent and delivered f. o. b. city, from which must be deducted the various transportation costs in order to get the actual price. In certain cities the prices given apply only to that portion which is considered as the producers' average production, the surplus being either handled by the producers' association or the dealers at somewhat lower prices.

The prices given are here reduced to the comparable basis of 3.5% fat, as different cities vary from 3% to 4% as the basic fat test. To reduce the prices per hundredweight to either a gallon or a quart basis divide by 11.63 or 46.33, respectively.

The prices paid by consumers are for average testing milk delivered in quart bottles. It is the grade of milk most generally sold in these cities and in most cases is for pasteurized milk.

Country Shipping Stations

Prices per cwt. paid at the dealers' country receiving stations or at producers' railway shipping plants are given as follows for January:

New Haven	$3.60	Newark	$3.38
Washington	2.90–3.71	Trenton	2.88–3.53
Chicago	2.50	Buffalo	3.22
Indianapolis	2.31	New York	3.38
Baltimore	2.92	Cleveland	3.10
Kansas City	2.03–2.45	Cincinnati	3.30
St. Louis	2.78	Pittsburg	2.90
Lincoln	2.19	Philadelphia	2.88

Retail Prices

The following table gives for a few cities the retail prices of special milk, certified milk, cultured buttermilk, cottage cheese, and cream for December, 1920:

Cities	Special milk per qt.	Certified milk per qt.	Buttermilk per qt.	Cottage cheese per lb.	Light cream* per ½ pt.

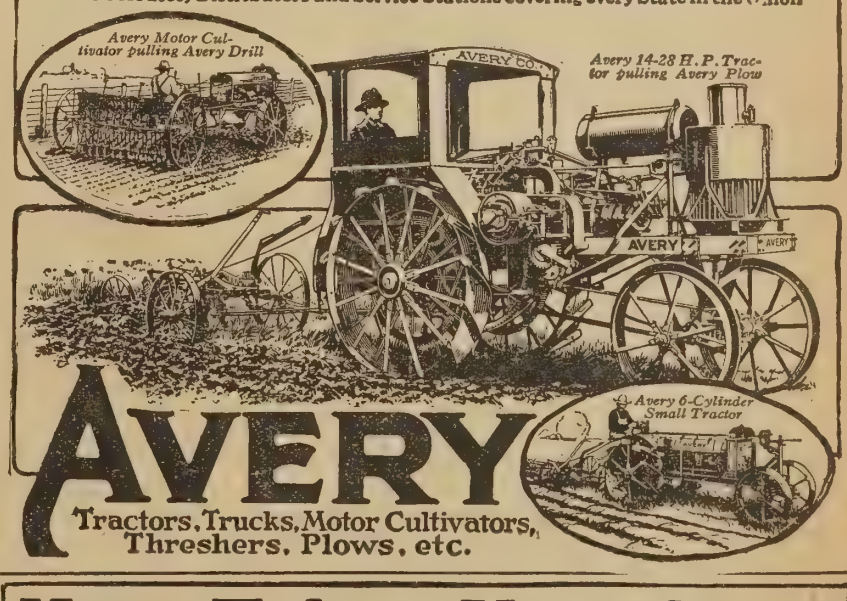
Avery-ize *Now* For Bigger Profits

The problem *now* is to raise bigger crops at *lower* cost. *Increased* production and *decreased* expense is *now* more important to you than *ever* before. Getting a tractor is the logical, practical answer to your problem.



Only a tractor can give you the *economical power* needed to work your land in the right way at the right time to get the best seed-bed—*speedy power* to take advantage of weather conditions, and hurry up your plowing, discing, harrowing and planting—*tireless power* that can do in hours' work that now takes days—*hardened power* that's ready in the early Spring when power is needed most—*concentrated power* that enables one man to do the work of several with horses—*which mean lower costs, bigger crops and greater enjoyment in farm life.*

Avery answers this problem for you with a complete line of tractors—seven sizes in the regular design using "Draft-Horse" Motors and "Direct-Drive" Transmissions—also two small Avery Tractors, the Model "B" 5-10 H. P. and the Model "C" Six-Cylinder. One and two-row Motor Cultivators, Motor Trucks, Power-Operated Tillage Tools, and Champion Grain-Saver Threshers and Silo Fillers.

Send For the Avery Catalog

Avery quality is now better than ever—there are many pleasing surprises for buyers of 1921 Avery machines, all shown in the new Avery Catalog. Write for a copy today. It is the most complete, up-to-date book ever published on motor farming machinery. Every farmer should have a copy. Sent free upon request.

HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

An Essential on Every Dairy

The title of this story might suggest several things, because there are so many essentials necessary for the successful management of a dairy farm. We might refer to the stables and the way they are kept or to the crops that are to be raised and taken care of for feed or to the management of the herd or again to the boys and girls of the farm. But we don't propose to talk about any one of these important items at this time for right now we think there is something taking place on every dairy farm that should occupy the attention of the boys and girls living there as much and perhaps more than any other one thing that this title might suggest. And so we are going to talk about the calves which are now beginning to put in their appearance on every well governed dairy farm of the country.

The abuse which some calves are forced to endure on farms that are shiftlessly conducted is almost unbelievable. We hope that none of the boys and girls who read this story have ever been guilty of abusing a dumb animal of any kind. Kindness to our farm animals is a cardinal virtue and it always brings its reward. Born in the manure and filth of the stable gutter on a cold winter's night to become chilled through before it is found the next morning, kicked about by the other cows as it attempts to struggle to its wobbly legs and finally dragged to some dark corner of the stable by the fellow who finds it, later on in the day to have its head shoved into a dirty pail containing some of its mother's milk in an almost vain attempt to get it to drink is the introduction that more than one calf has to this world. To be sure, boys and girls, a calf is a calf, but don't forget that even a calf has very sensitive feelings. If for no other reasons than to be humane, a calf does not deserve this kind of treatment. Nor will we make any discriminations between those calves which we know will go to the block to be slaughtered for veal and those that we expect to raise to add to our herds or later to be sold for breeding purposes. What applies to one, applies equally well to the other and a calf that lives with us but for the short period of four or five weeks deserves every consideration that a calf should be given. We wish every farm boy and girl could read this story about taking care of the calves, because to them often this task falls. So strong is our faith in this subject that we are not willing to excuse any case on the plea, "that I did not know any better". It is our business to know all about the things which we are doing. If there is any other young animal that makes a greater appeal for human sympathy than a calf as it stares at us from the depths of its big innocent eyes, we have not yet found it. So when we read what is to be said here, we trust that it will be analyzed in the light of plain, every day common sense.

Lessons from Nature

What will a cow, about to become a mother, do when left to choose for herself? True to her instinctive genius she seeks a place of seclusion. Here she is free to care for her new born calf the way Nature intended the job to be done. No sooner is her new born dropped than mother bossy is on the job. She immediately starts to dry the wet little youngster by licking it so vigorously that she almost knocks it over as it attempts to rise. Drying her calf in this way gives it strength for the blood is started into a more rapid circulation and its body is not so liable to become chilled. And the place she has chosen is a clean one where there will be little danger of her calf becoming infected with bacteria that later on give rise to serious diseases. And when the calf has gained sufficient strength to rise to its feet, mother bossy sees to it that it gets its first real dinner, and this usually ends the worst part of her trouble in raising her baby. Intestinal troubles are not very liable to arise in a calf that gets its fill of its mother's first milk, because Nature has purposely provided that the first milk shall be of such composition to start the digestive organs properly. Every farm boy and girl knows that it is not until about the ninth milking that the cow's milk is saved for house use, for it takes about this length of time before it has come back to its average composition of whole milk. This first milk, following the birth of the calf, is called colostrum and its purgative effect cleans out the digestive system of the calf.

WHAT THE BEST OF CARE WILL DO

Applying Nature's Methods

Since Nature's ways are usually the best, why should we not draw from her the fundamental lessons necessary for the welfare of these little dairies in the making. That would be a sensible procedure, I am sure you will agree, so let's set about to see how we may apply some of these natural considerations to those which must be at best more or less artificial.

Where Shall the Calf be Born

If we follow Nature's advice, we will at least select a clean place in the stable. Now in order to have this, we will probably have to look ahead for stables usually become contaminated in one way or another. A box stall makes an ideal place for cows to give birth to their calves. These conditions almost approach Nature, for here the cow will have freedom to attend to her calf immediately upon being dropped. The stall should be dry and free from cold drafts and it should also be well ventilated. A damp, poorly ventilated corner of the stable weakens the calf's vitality and resistance to disease, and in addition we ask you to keep the humane side of the argument in mind. An abundance of dry, clean straw makes an ideal bed for it keeps the calf warm and dry, conditions which add to its comfort and welfare. We cannot be too particular about this matter as it is one which is so vital in giving the calf the right start.

Things to Know About the Birth Weights of Calves

Perhaps it has already been a matter of your observation that calves from the lighter dairy breeds such as the Jerseys and Guernseys weigh less than those from the heavier breeds like the Holsteins, Ayrshires, and Brown Swiss. And, furthermore, you have perhaps noted that the bull calves usually outweigh the heifers in any breed. Weights of calves for the various breeds taken on the day of birth have shown the following results:

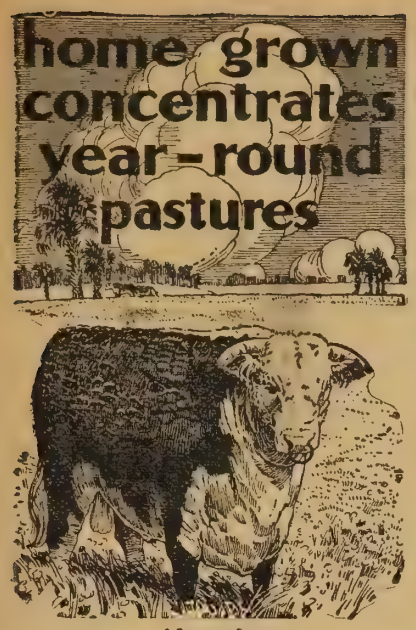
Breed	Male calves	Female calves
	Lbs.	Lbs.
Jersey	62	59
Guernsey	70	68
Ayrshire	77	71
Holstein	90	88

While these weights could not possibly hold true for each individual, they at least indicate relative facts upon this subject. Weights much lower than these might be ascribed to several causes, such as lack of proper care and feed of the cow, or it might be due to the calf being that of a heifer bred too young.

When Shall the Calf be Weaned from its Mother

This might depend upon several factors, but usually in the case of the dairy farm the best practice is to allow the calf to remain with its mother at least one full day and we think that two would be better. And there is a reason for this advice, too, again found in Nature's way. By allowing the calf this privilege, and it certainly should be regarded as his privilege, we are assured that it will in this time get sufficient of the colostrum milk to set its insides to working right. It is much easier to follow this practice than it is to be compelled to doctor sick calves later on. And which do you consider to be the more humane way, to follow the practice suggested or to drag the little thing from its mother before it has gained any strength, to be cuffed and knocked about in an attempt to get it do what is almost an impossibility? Patience and not force should be used at this time.

But there comes a time when the calf must be weaned from its mother, and then he should be taught to drink. And right here lies the strength of our argument, not to allow the calf to remain longer than two days with its mother. It is easier to teach a young calf to drink than it is one that has run with its mother for a week or two.



But whenever the time comes one may expect to encounter some difficulty at first, and this is just the reason why we urge patience at this time. It will accomplish more than force ever can. It is usually a good practice to keep milk away from him for at least one meal so that he will get somewhat more eager to get a feed than he may otherwise be. This will make him more anxious and it will be a great aid in teaching him to drink the first few times. A good method to practice the first couple of times is to give the hungry calf your finger and then by lowering his head to the milk in the pail he will get his first taste and if he is very hungry he is quite liable to keep his head there, and when his mind is so occupied with getting his meal, it is a simple matter for you to slip your finger from his mouth. A few trials like this mixed with patience will be all that is necessary to melt all of the troubles away.

How Much and How Often Should He be Fed

Guesswork is not head work and it is head work that counts on the farm nowdays as it does everywhere else. At the outset we should accept this fact, that it is rarely necessary to feed to any one calf more than 12 pounds of whole milk at the start. To be more exact here is a rule that works out very well and it is not a matter of guesswork either, for it has been used for a long time and has been found to fill the bill. For each eight pounds of live weight that the calf can show, he should get one pound of whole milk. Applied it would work out thus: For a calf weighing 80 pounds, there should be allowed 10 pounds of whole milk for his daily feed. Now this amount should not be guessed at. Of course experience teaches many things and after awhile we get so that we know approximately the weight of a given amount of milk in the pail which we are using. But it is better to play safe and measure out the milk. A gallon of whole milk will usually weigh just about eight and one-half pounds, so from this we are able to calculate the ration. Furthermore, anything other than knowing the exact amounts you are feeding may lead to serious digestive troubles for the calf may get too much and this would also be a waste of good milk.

Experimental work done on feeding calves shows that a calf will thrive better when given his feed three times a day compared to two times a day. A large amount at one time followed by a long period without any milk makes a hungry, discontented calf, conditions not good for the best development. Many feed only twice a day, however, on account of it being more convenient for them to do so, feeding in the morning at milking time and again at night.

Irregularity in feeding is also a cause for digestive disturbances. A young animal learns the time to look for its feed and unless it is given at the same time each meal, it becomes discontented and worried. And right in this connection it is very important that the milk be in a uniform condition from day to day, and explains why great care should be exercised when the change is being made from

Along the

Seaboard

the south's newest great railway

Productive prairie land along the Seaboard, with pasturage every month, can often be bought for but little more than interest Western farmers pay on mortgages.

Soy beans, velvet beans and peanuts furnish an abundance of rich home-grown concentrates. Instead of housing cattle for months and feeding them hay, silage and concentrates, they are turned into velvet bean pastures and rapidly get into market condition. Wonderful gains are made and splendid flavored meat. In the "Black Belt" of Alabama and in Georgia alfalfa flourishes.

Shoats hog down the peanuts, making big gains at lowest cost per pound, one acre of peanuts equalling two of corn.

Ewes in Florida and other States drop lambs from November to January. Early pastures are provided by sowing oats, rye and rape, and the farmers have a well-grown fat 65 lb. by April — get "hot-house" prices for pastured lambs.

Stock-raising, general farming, fruit and vegetable growing are paying big profits. Write me for booklet and information. Advise kind of farming in which interested.

whole milk to skimmilk. I have even heard boys express themselves upon this subject by saying, "Oh, I guess just this once will not make very much difference." Still it may be the cause of giving your calf a serious setback in his health and growth. It simply means that you are taking a chance, and many such a chance has been taken with its attending consequences. Avoid chances and guesswork in handling your calf and those of dad's for which you may also be caring.

And before leaving this subject of feeding following the weaning from the cow, there is something else that should come to our attention. There is an old proverb that runs like this, "a bird in the hand is worth two in the bush." We believe that at feeding time, a calf in the stanchion is worth two loose ones in the pen. It is much easier to feed and it prevents that miserable sucking-each-other habit which must later on be broken. And, besides, if they are learning to eat grain, it is much easier to get them to do it when they are shut in stanchions and they will each then get their share. I have actually seen calves fed without stanchioning that develop the sucking-each-other-habit so badly that the grain ration which usually followed the milk feed was practically all eaten by one or two of them. To be sure, if the calves you are raising are each tied up in some lonesome, dark corner of the stable the sucking habit is prevented. But we are not talking about such antiquated ways of confining calves. We want them to have their freedom at all other times other than feeding, so that they will get plenty of exercise.

When Shall Supplementary Feeds Begin to be Used?

To continue to feed whole milk alone with the ever increasing amounts which would have to be used as the calf grows older, would indeed be an expensive practice. Skimmilk is perhaps the best single substitute. But if there is no skimmilk available, then we shall have to resort to other supplements. Let us consider the case of skimmilk first. No attempt should be made to change from whole milk to skimmilk before the calf is at least three or four weeks old. And when the change is being made it should be a gradual change rather than a complete sudden change from one to the other. The skimmilk should be sweet and warmed to the temperature of the whole milk. The two should be mixed at about the rate of half and half and during the following five or six days the change may be completely made if so desired. Sweet skimmilk is not liable to cause any trouble when used in this way. Where skimmilk can be had its use is to be advocated for at least five or six months, using it at the rate of from 10 pounds to 15 pounds daily for each calf. But in any event we think it is a good thing to continue feeding whole milk for at least one month, and then gradually work in some of the substitutes.

(To be continued)

Junior Letter

Hoard's Dairyman Juniors:—I have not written a letter to the juniors for a long time because I have been pretty busy on the farm. I bought a little pig from my father about a week ago and she is certainly doing fine. We have about thirty small pigs now. They make quite a noise at meal time. I am going to run the truck for my father as soon as school is out. We take our milk to a restaurant every day.

There is a boy who lives next farm to me. I wish you would write to him and get him interested in Hoard's Dairyman Juniors. His name and address are Leonard Welmich, R. No. 33, Barberton, O. I wish some of the juniors would write to me. My adress is R. D. No. 23, Barberton, O. Loyal Saurer.

The Farmer's Concrete Mixer

SHELDON Batch Mixer — Price $16.80 Up

Build for permanence. Put a SHELDON Mixer to work on your farm. Saves time, labor, money. Takes the backache out of concrete. Gives you a better job. Sheldon is the pioneer builder of mixers for farmers. Thousands in use now on farms —in every state. Buy a Sheldon. Build your own concrete tanks, feeding floors, silos, foundations, etc., at a big saving. Costs only $16.80 and upward. Write for book.

This Picture Shows Sheldon Power Mixer No. 6

Read What These Sheldon Owners Say

It is the greatest labor saver I have on my farm. Two men can do ten times the amount of work in one day and do it ten times easier than the old way.—HARRY L. WALLACE, Jeromeville, O.

The machine I bought of you in 1916 has given continual service to date *without a single repair,* and at present needs only the small cast wheels that support the drum, and their supports.—ASA A. GOBLE, Huntington, Ind.

Owing to the scarcity of labor the machine is practically indispensable in making farm improvements with concrete.—J. McGRARY, Massena, N. Y.

I am more than busy with my Sheldon Mixer. I have more work than I can do. I get $10 a day when I work out.—JESSE L. WITTER, Wellsville, N. Y.

Last spring we purchased a set of castings to make a concrete mixer. It was constructed per the plans furnished and *it surely worked great.*—D. M. BRUBAKER, Freeport, Ill.

George Hanig of Ackley, Ia., writes that he "put through" 106 yards of concrete in 21 hours. That's more than 40 cubic yards for an eight-hour day.

FREE PLANS

Make your own concrete mixer. Costs so little you can't afford to mix by shovel. With our iron and steel parts we send Free Plans and a permit for building your own. Or, we will sell you a built-up machine, at a very low price.

You Can Make Big Money at Concreting

If you buy a Sheldon Mixer for your own use you can make many times its cost in a season by renting it to your neighbors. Or, if you want to go out with it on contracts, you can easily earn $10 to $20 a day. Sheldon owners are doing it right now. The jobs go to the man with a Sheldon Mixer every time. A profitable side line for spare time.

Purdue Dairy Night

The Dairy Club at Purdue University is planning a student dairy show for February 23. This is Dairy Demonstration Night and has become an annual event. A demonstration will be made from the nutrition department of the University. Sanitation and bacteriological methods will be demonstrated. Another demonstration will show the process through which market milk passes from the dairy to the consumers' homes.

Eighteen pure-bred bulls were sold recently by the Petaluma Calf Club of California. Ten of the eighteen were purchased by Marin County dairymen. A. J. Gambonini bought Valdessa Fayne Pontiac, an eight-month-old calf, for $700, topping the sale. M. T. Freitas Home Ranch bought two, these being the first pure-bred bulls to be placed on the ranch.

Marin County of late years has ranked in sixth place among the dairy counties of California. Increased interest in better cattle at this time is improving the dairying and increasing the production.

Ayrshires on the Gossard Breeding Estates of Indiana have been awarded the gold medal offered by the Indiana State Dairy Association for the six highest producing cows on official test in 1920. These six Ayrshires made an average production of 16,446.5 lbs. milk, 628.11 lbs. fat. Four were mature cows and one a junior two-year-old. This is the first year in which an Ayrshire herd has won this award.

Have you talked with your neighbors about subscribing for Hoard's Dairyman? Why not do it now? Make up as large a club of subscribers as you can and send them in.

Three Great Heifers

Consigned to the

Red River Valley Holstein Sale

Crookston, Minn., Feb'y 9th

(1)

Bess Pietertje Ormsby 3d

A splendid individual with a world of breeding. She is sired by King Pietertje Ormsby Piebe and from a full sister to Sir Pietertje Ormsby Mercedes 41st. This makes her 100% the same blood as Marathon Bess Burke.

(2)

Johanna Olathe Bonheur

A beautiful two-year-old daughter of Johanna Bonheur Champion. Her dam is a 20-lb. daughter of Sir Beets Cornucopia Netherlands and a 29-lb. cow, now completing a 900-lb. record as a 12-year-old.

Both of these heifers are finishing up splendid 305-day records and are due to calve May 10th to the services of Sir Pietertje Ormsby Mercedes 41st.

(3)

Bess Burke Colantha

A yearling daughter of King Korndyke Colantha Ormsby, 1,255-lb. son of Colantha Johanna Champion. Her dam is a daughter of Bess Burke Ormsby, the $25,000 full sister to "41st". A great combination of breeding **and she is due in June to the service of**

Sir Pietertje Ormsby Mercedes 37th

To the breeder looking for foundation stock of unusual quality these three heifers offer wonderful opportunity. Their calves will carry the strongest blood lines that it has been possible for us to produce.

It is the Engine's Turn to Turn

EVERY dairy farmer who handles a large volume of milk knows that turning the easiest running cream separator in the world by hand gets to be monotonous work before the day's run is finished.

The **Primrose Direct Power Drive** has simplified greatly the matter of separation on a considerable scale. This practical little addition to Primrose efficiency can be attached to any hand-operated **Primrose Cream Separator** and does not interfere in any way with hand turning of the separator.

By means of this simple attachment, direct connection can be secured with an engine without speed-reducing gear, to a line shaft or portable electric motor.

If your milk volume has reached such proportions as to make separating a real task, then it is most certainly the engine's turn to turn. A **1½ h.p. International Kerosene Engine** and **direct-power-drive Primrose** will shoulder the job and handle it efficiently

The Human Side of Cow Testing

(Continued from page 83)

was to become a farmer at all, he would be a dairy farmer.

Five years ago last spring the back-to-the-land virus delivered its final deadly punch, and Stanley found himself spending half of his last week's salary to buy a ticket to Plainfield. He wanted to hire out to the very best dairyman in the community, from whom his purpose was to learn the dairy business. As he was entirely unacquainted at Plainfield, this procedure was not the easiest matter in the world. He laughed as he told me his experiences in finding the right place, though doubtless they did not seem so humorous when he was living them.

After working temporarily for several farmers and by shrewdly asking numerous questions so as not to divulge his real purpose, he became satisfied that the man for him was William Kent who, I believe I told you, is president of the Plainfield Cow Testing Association. Just at the time Stanley reached this conclusion, however, Bill wasn't in need of more help, especially such help as the green city kid Kent's practiced eye sized his applicant up to be. Stanley did not surrender at this. Instead he went to Bill's nearest neighbor, who lived almost directly across the road from him, and obtained a job where Kent could not well help knowing of what kind of stuff the young man was made.

He pitched in with a will, kept his eyes and ears open, and made good in a hurry. Haying time found Kent with more alfalfa to put up than he and his hired man could handle. With his neighbor, a grain farmer, the farm work had slackened a little just then, and Stanley got his chance with Bill. Though Kent increased his wages because of his satisfaction with his new helper, this was not the prime consideration with Stanley. He was at last getting his opportunity to learn the dairy business, and at first he would have stayed for his board.

Now you know as well as I that any hired man who stays long 'round the average dairy farm is going to use his hands. Well, Stanley developed those undersized forearms of his all right. He also kept his gray matter out of mischief by applying it to Bill Kent's business. From his office experience Stanley had obtained a fairly

good knowledge of business methods and was good at keeping records, all of which Bill turned to good account in the management of his pure-breds. In spare time Stanley read all the books and bulletins relating to dairy farming that he could put his hands on, so that by the time he had worked for Bill about two years he was quite familiar with the practical aspects of dairying. Then, the following winter, as a sort of final chapter in the education of this embryo dairyman, he took a vacation long enough to attend a short course in dairying at the university.

Stanley had been working for Kent nearly three years, making himself almost invaluable to him, when he got the idea that he would like to strike out for himself. Meanwhile he had fallen in love with Marjorie Kent, Bill's eldest daughter. At about the same time he saw a farm for sale that was very much to his liking, and was hoping to find some way of buying it. His savings, of course, would make no impression against such a deal, so he asked Bill to act as his security in arranging a loan.

Bill met this appeal with the hard-headed proposition that Stanley rent the farm for a couple of years, to prove what he could do, after which if he needed assistance he could count on his probable father-in-law. While not just what he had asked for, this proposition appealed to Stanley's sporting sense and he accepted it on the fly. Accordingly he used the bulk of his savings to buy a two-year option on the place, Bill backing him for enough equipment to enable him to carry it on.

That first year on his own was no bed of roses for Stanley Miller. He shouldered the job alone, however, Marjorie making him wait a year for reasons of her own. But despite being his own housekeeper and meeting the usual difficulties of the beginning farmer, he came through the year in good order, making a substantial reduction in the indebtedness on his equipment. By this time Marjorie was evidently satisfied with Stanley's record, as she married him then, and together they made excellent progress the second year.

The two years of renting ended last spring, whereupon Mr. Kent saw to it that Stanley had the credit with which to buy the farm. The happy couple is now engaged in shooting the mortgage full of holes and, with his nice start in pure-breds, his up-to-date methods, and eagerness always to be improving his dairy practices, I know of no dairyman of whom success might be better expected than Stanley Miller.

There is a good idea in Stanley's hired-man route of getting onto the farm. A lot of back-to-the-landers would be much better off if they would follow his plan instead of expecting to inherit the earth the first season. Stanley was wise enough to obtain his knowledge of farming while someone else was paying his way. And he picked a good man from whom to learn the dairy business. That's my game, too, though perhaps I never thought of it in just that way before. I think I have the advantage over Stanley a little, however, as the cow tester, instead of learning the methods of but one dairyman, can study the best methods of the entire association. As ever,

HORACE EVANS.

(Editor's Note: This is the second of a series of six letters prepared by Frank M. Chase. The next will appear in an early issue.)

The chief value of cowpea hay lies in its high percentage of digestible protein. This has been verified by numerous feeding tests.

What Is the Tractor's Record of Economy?

Before you buy a tractor, get its *record* of economy.

Don't be satisfied with merely statements of what the tractor will or *may* do under *certain* conditions, but get a record of what it has done under *all* conditions over as long a period of time as possible.

The story of any one of thousands of old OilPull tractors, scattered throughout the world, would prove the unequaled economy of the OilPull. Take the one owned by Radtke Bros., Spiritwood, North Dakota, which was bought nine years ago. Its owners have always given it hard service the year 'round—plowing and breaking sod, threshing, operating feed mill, etc.

For seven years it performed faultlessly without the need of a single important repair! It is now nine years old and not half "worked out." Many twelve-year-old OilPulls, including the first one built, are still on the job!

The OilPull's remarkable economy in fuel is well and widely established. For the last nine years the OilPull has held the world's tractor fuel economy record! And—consider this point—the OilPull is the *only* tractor backed by a written guarantee to burn successfully all grades of kerosene, under all conditions up to its full rated brake horsepower! The OilPull is the tractor of *proved* economy. When you buy an OilPull you *know* you are getting the tractor that is cheapest in cost per year of service.

Ask your OilPull dealer about other OilPull features that are as outstanding as its economy—about its dependability, long life, etc.

If there is no Advance-Rumely dealer in your town, write to us for catalog.

ADVANCE-RUMELY THRESHER CO, *Inc.*
LaPorte, Indiana
29 Branch Offices and Warehouses

Nine-Year-Old OilPull, Owned by Radtke Bros., Spiritwood, N. D.

RUMELY OILPULL TRACTOR LA PORTE IND

Guaranteed to burn kerosene under all conditions up to its full rated brake horsepower. Holds the present world tractor fuel economy record.

ADVANCE-RUMELY

Good Maxims

Attend carefully to the details of your business.

Sacrifice money rather than principle.

Take care of the pennies and the dollars will take care of themselves.

Strive to do right, fear to do wrong.

Injure not another's reputation in business.

Observe good manners.

Pay your debts promptly.

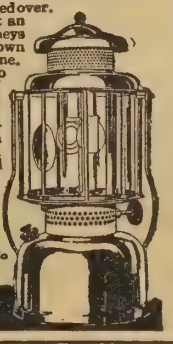
Punctuality is better than wisdom.

Use your leisure time for improvement.

Extend to everybody a kind salutation.

Zealously labor for the right.

Recoveries by the Government, during the last fiscal year, for trespasses on the national forests amounted to $87,082 in damages and $3,225 in fines. These included grazing, timber, fire, game, and occupancy.



It's farm inventory time. Don't think of it as an impossible task. A half day will do the job in most cases.

More Light Than 20 Old Style Oil Lanterns

THE Coleman Quick-Lite Lantern makes all after-dark work easy. Lights barns, sheds, feed lots, cellars—any place—with a brilliant, pure white radiance of 300 candle power—the finest, steadiest light you ever saw. Rain-proof, bug-proof. Won't blow out in wildest storm.

Coleman Quick-Lite

Can't spill or explode even if tipped over. Cost to use less than half a cent an hour. No wicks to trim. No chimneys to wash. Makes and burns its own gas from common motor gasoline. Lights with common matches—no alcohol torch needed. Built of brass. Has mica globe with metal reflector. Inspected, tested and guaranteed. Take this advertisement to your dealer. Ask him about the Quick-Lite Lantern. If he hasn't it on sale yet, he will gladly order one for you on approval. Free book on request. Write today to Department HD6

Don't Guess at What Feed Is Worth

Scales are used everywhere, from drug stores to steel mills, but they are no more important anywhere than at the feed trough and behind the cows in the dairy barn. A daily record of feed consumption and milk production is necessary for intelligent feeding. Weigh the feed you are now feeding. Weigh the milk you get. Put down each day, for each cow, what the feed costs and what the milk brings.

BUFFALO CORN GLUTEN FEED

Then get BUFFALO CORN GLUTEN FEED — the milk-producing concentrate — from your dealer. Mix up a mixture with wheat bran or other mill feeds, oats, etc. Make the BUFFALO CORN GLUTEN FEED one-third, one-half or more of your mixture. Then feed this mixture to your cows, each cow according to her production, but give every cow enough to show what she can do with good feed when she gets a chance. Weigh each cow's feed. Then weigh her milk. A little figuring will convince you that it pays to feed BUFFALO CORN GLUTEN FEED.

Write us for literature giving mixtures for feeding BUFFALO CORN GLUTEN FEED—*and sample if you would like one. If your dealer cannot supply you, tell us who and where he is.*

An Object Lesson in Testing

(Continued from page 89)

as good an illustration as one could find of the value of testing cows. The cow shown in the picture with her is a half sister. They are the same age, very similar in appearance, weight, and height. At the time Mr. Kinsley, their owner, joined a cow testing association two years ago, the two cows were giving about the same

Two cows, half sisters, considered of equal value. On test one proved more than twice as profitable as the other.

quantity of milk. Mr. Kinsley considered them of equal value and among the best cows in his herd. "If I had been selling them," he says. "I should have asked the same price for them before I put them on test."

It was another matter after the two cows had been on test a year. The one on the right rounded out the first year in the cow testing association, the high cow of the test associations of Iowa and earned $182 for her owner. The other had produced only a little over half as much fat, her record for the year being only 288 pounds. She had earned her owner $43. "The circumstance only goes to show," says Mr. Kinsley, "that no matter how good a judge of cows you may think you are, you can be fooled. There is only one way to tell, and that is to test. Think what it has meant to us to learn the truth about those two cows for we considered them both good and were using both of them in an effort to improve our herd. We were right about one, but were actually lowering the standard of our herd by using the other."

The test has also, through the knowledge it gave the Kinsleys, allowed them to make the very best of the superior cow, as is shown by the fact that they have been able by care and feeding to raise her 1919 record of 520 pounds butterfat up twenty-five per cent higher the past year to 651 pounds. She has earned her owner a full $300 in 1920 above feed cost.

Iowa. F. L. CLARK.

Prices of Bran and Shorts

HOARD'S DAIRYMAN:—"Thirty dollars a ton for bran and a dollar a ton less for shorts," the miller answered to a query of a feeder who had come to the local plant for a ton of feed.

The prospective buyer was still in doubt as to the price, however, and asked a second time what bran and shorts were bringing. The feeder recalled that hardly four months ago, when he purchased a wagon-load of both bran and shorts, the miller quoted a price on the heavier offal about $20 a ton above bran. So he was naturally surprised when the miller repeated his price of thirty dollars a ton on bran and a dollar a ton less for the gray shorts or flour middlings. "That's the way the market is moving," the miller added, to assure the prospective buyer that he was not in error.

Of the many extraordinary price movements in the market for various feedstuffs, the fluctuating premium between bran and shorts has reflected most significantly the basic influences surrounding the trade. From a relative price level showing a premium of more than $20 a ton on gray shorts over bran, the market since the late fall has receded to a basis where the light offal commanded a premium of as much as $2 a ton. Only a few times in the history of the milling and feedstuffs industries of the United States has such a disparity between the bran and short prices prevailed. Before the war the average difference amounted to about $4 a ton on shorts over bran and seldom did the differential range above $6 or below $2 a ton. On some markets of the country bran is still selling at a slight premium, but a slowly strengthening tone is developing in the heavier offal, and in most of the important milling sections the premium is again on the shorts or middlings, though still very slight.

Based on feed value, shorts should command a premium above bran. But it has not been a question of relative feeding value; instead a question of demand and supply and a problem of obtaining substitutes at cheaper prices. In the case of shorts, both the brown and gray varieties, the market has suffered a sharp contraction in demand owing to the enormous production of the coarse grains, including corn, kafir, and milo, which are available to consumers at a sharp discount under the price at which the mill feed has been selling. With corn and the sorghum grains available in larger quantity than ever before and the crop more evenly distributed and with the price well under a cent a pound net to the producer, it was only natural that the producer of hogs refrain from the feeding of shorts on an extensive scale with the price of the

feed above a cent and a half per pound. The grower of pork animals was stimulated in the use of the substitutes for shorts by the radical downturns in prices for hogs and the reduced returns from fattening operations.

Various substitutes have been available for dairymen in the place of bran, some localities being more fortunately situated than others in this respect, yet the prices of the substitutes were hardly sufficiently lower to warrant their use on an extensive scale instead of the mill offal. Alfalfa hay, for instance, has been selling practically on a parity with bran, at least for the better quality offerings demanded by dairymen. The excellent late fall and even early winter pastures provided the best substitute for bran. There is no doubt that the consumption of bran has been sharply reduced, though with production less than half normal. Owing to a lack of demand for flour and resulting light operations of milling plants, the slackening in the buying was more than offset by the scant offerings in consuming channels.

Bran can be bought on the Minneapolis market around $25 to $26 a ton, sacked, for carlots, brown shorts around $23 to $24, and gray shorts or flour middlings at $27. In Kansas City the market for bran is holding around $25 for prompt shipment and about $24 a ton for all February delivery. Gray shorts on the leading Southwestern market are at a premium of about a dollar a ton over bran. Bran in St. Louis is bringing about $30 a ton and $32 to $33 a ton for gray shorts. Ohio markets are quoting around $36 a ton for bran and $38 to $39 a ton for gray shorts or flour middlings. Other markets are on a freight differential.

The outlook for mill feed, particularly bran, offers no encouragement for bullish operators. Production of flour by mills in both the spring and winter wheat sections of the country is increasing and, while normal operations are not expected for any lengthy period, the output of feed will probably reach a far greater figure than in the first half of the crop year. The exceptionally mild winter temperatures thus far have effected a sharp reduction in buying of bran for deferred shipment, and the consuming trade holds little feed above its current requirements. Nor can the dairymen be expected to take hold more freely in view of the large stocks of roughage available in most of the dairying districts and the more extensive buying of alfalfa hay, which is declining with greater rapidity than bran. While there is no direct relationship as competitive feeds between bran and corn, still the fact that the coarse grain is at a sharp discount will do much to exert bearish pressure on the wheat mill offal. Corn ordinarily commands a considerably higher price than bran.

It is possible, however, and even probable that while bran goes off in price, as generally anticipated, gray shorts or middlings will advance. The mill feed market is entering a period of the year when hog producers are heavier consumers of shorts for young stock and, with the advance in the season, the differential between bran and shorts widens more and more in favor of the heavier offal. In this respect, corn will exert much pressure on bran. Instead of using larger quantities of shorts, hog producers will not take hold unless the price recedes more nearly to a parity with the coarse grains, including kafir and milo as well as corn. And with these grains at $7 to $10 a ton discount under gray shorts, there will be a strong tendency to hold the mill feed down in price. This naturally will prove a weight upon bran and thus force this offal down.

Missouri. SANDERS SOSLAND.

Milkless Quarters

A high grade Guernsey heifer on our farm became fresh with first calf recently and has only milk in the two hind teats. There is just a drop or two in the front teats. Is there a chance that she will be all right with the next calf?

Libertyville, Ill. H. H.

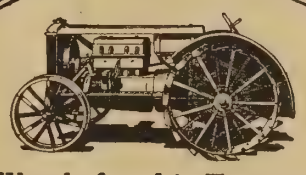
Chances of improvement are extremely poor in cases such as you describe. It would be well to allow a calf to nurse, or to go through all the motions of milking, three times a day. If the condition was not caused by garget (mammitis) milk may then gradually be secreted. If not, the heifer should not again be bred.

Uncle Ab says: If you have a grouch, hold it till after the next meal; feeding may tame it.

How a $42,500,000 Company Upheld a 65-Year Reputation

FROM the very first, Allis-Chalmers recognized that the severe strains of farm duty require more than just a "power plant on wheels." And so this company—for over a half century builder of only high-grade machinery—set its vast resources and one of the world's foremost engineering staffs at work to build a super-tractor. That was seven years ago.

The Tractor that Took Seven Years to Build



Carefully—and under the supervision of engineers who have built the machinery for some of the largest factories in the world—the first Allis-Chalmers tractor was designed. But Allis-Chalmers was not satisfied.

In quantities of only five at a time, tractors were produced for testing in the field. Performance was watched—a careful check-up made on costs. Points of weakness were made points of strength. But still production was delayed!

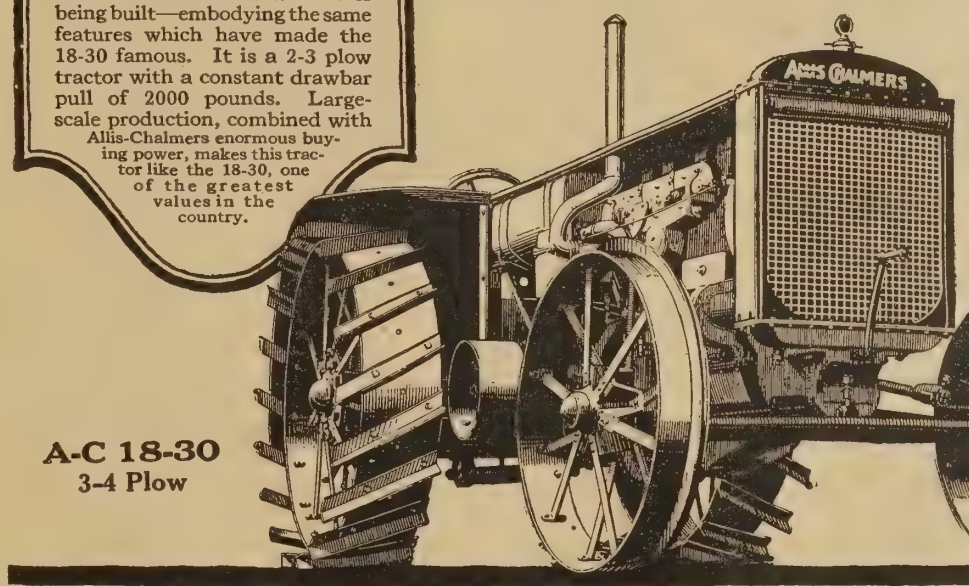
Finally a limited number of Allis-Chalmers 18-30's were released. Would they stand the punishments of service? Would they uphold the quality traditions of this 65-year-old company? This was the final test—and the verdict of the farmer was awaited.

That seven years of engineering effort and the expenditure of $3,000,000 were justified is best proved by the fact that not a single A-C 18-30 owner made complaint.

Today, Allis-Chalmers tractors are perfected—this $42,500,000 company has reached the point for which it has striven for seven years. Now, with one of the largest manufacturing organizations in the world, Allis-Chalmers goes into volume production!

Watch for this Tractor!

So remarkable has been the performance of the A-C 18-30 that now a 12-20 is being built—embodying the same features which have made the 18-30 famous. It is a 2-3 plow tractor with a constant drawbar pull of 2000 pounds. Large-scale production, combined with Allis-Chalmers enormous buying power, makes this tractor like the 18-30, one of the greatest values in the country.



Long Life "Built-In"—Surplus Power Guaranteed

Frameless construction and flexible three-point suspension relieve the 18-30 of all strains, even in the roughest going; air entering the carburetor is first washed—freed of every particle of dirt and dust; an oversize fin-and-tube type radiator prevents overheating, even in warmest weather.

Then, too, the abundant reserve power of the 18-30 is always ready for emergencies. Under ordinary soil conditions this tractor pulls four 14-inch bottoms—without strain. It easily handles a 28-inch separator, with all attachments. The special governor (Allis-Chalmers' own make), automatically holds the engine at a constant speed—varying the mixture according to the load.

WRITE FOR BOOKLET TODAY: Ask for the 18-30 or the 12-20 booklet—or both—giving exclusive features of A-C construction.

The Allis-Chalmers Mfg. Co., Dept. 28C Milwaukee, Wis.

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Eversion of the Womb

Turning the womb (uterus) inside out (eversion) sometimes occurs after calving (parturition) and proves promptly fatal unless the organ is at once cleansed, disinfected, and returned to place. Fatalities in this condition result in a few hours from shock or bleeding or in a few days from infection (septic metritis) following replacement of the organ.

In our experience eversion of the uterus most commonly occurs when the pelvic ligaments and bones of an adult cow are in an abnormally relaxed condition and the afterbirth has been retained. The accident then results from the severe straining efforts of the cow to expel the afterbirth, which is tightly held by wedging of its projections (villi) in the cavities (crypts) of the cotyledons or "buttons" of the womb. The accident may also follow rough assistance at calving time or rough removal of the afterbirth.

When it occurs the womb is found hanging from the body as a great, red and often bleeding mass, with the afterbirth adhering to the red-raw cotyledons. At this time, in many instances, the mass has become fouled with manure and filth and may be covered with straw and chaff. If long exposed it will also be intensely engorged with blood and have become so brittle or friable that it may readily be torn or punctured with the fingers and often is found bruised, lacerated, and bleeding as a result of trampling by the cow's feet.

When the condition is discovered the veterinarian should be summoned at once. Meanwhile the womb should be thoroughly cleansed with warm, boiled water containing two tablespoonfuls of table salt to the gallon, and placed upon a clean sheet or rubber cloth.

The veterinarian upon arrival administers morphin or chloral hydrate to lessen straining and combat shock. He again cleanses the womb, removes all foreign bodies, and if necessary applies an astringent such as a weak solution of alum or acetate of lead to toughen the tissues. Some practitioners also apply a solution of tincture of opium as a soothing agent and persistently bathe the protruded parts with cold water and even bandage them with cold, wet cloths to reduce the mass so that it may be replaced. At the same time the tail and rear parts of the cow are thoroughly washed and disinfected.

When everything is in readiness for replacement of the womb the cow must be got upon her feet with her hind parts high, or they may be raised with a block and tackle. The everted vagina, at the vulva or opening of the body, is then grasped with both hands and compressed and pressed inward while an assistant supports and raises the mass of the womb upon the sheet or rubber cloth. If the parts are dry this may be greatly facilitated by freely applying pure vaseline to the vulva and protruding vaginal wall.

When the parts nearest the body of the cow have thus been worked into place, similar methods, continuously applied, compress the womb itself and cause it to follow the vagina. When a large part of it has entered the body the fist is then pressed strongly into the center of the remaining portion and causes it to follow into place. The hand should continue inward and be used as perfectly as possible to smooth the womb into its normal position so that straining will not ensue. If this is done a truss or stitches need not be used to retain the womb. After treatment consists in giving stimulants and internal antiseptic or hypodermic injections of a bacterin against infection.

Fistula of Teat

Milk leaks through small orifice, half way down the teat, with regular canal open. This hole was left after a large gash had otherwise completely healed. The cow is now entering her dry period. What can be done to close the new channel permanently?

Port Washington, Wis. B. B.

Immerse the teat in hot water containing all the boric acid it will dissolve. Then insert a sterilized milking tube, the cow being cast and her legs tied. Make a fresh wound of the fistulous tract. This is best done by scraping with a curette. Swab with absorbent cotton and when bleeding has subsided apply tincture of iodin to the wound. Then coat teat with pine tar and bandage with a narrow strip of antiseptic gauze, applying more pine tar on each successive layer of gauze until seven or eight turns have been taken, when the gauze should be stitched in place and again coated with tar. Remove gauze in ten days if fistula was recent and in three or four weeks if of long standing. Saturating dressings with alcohol facilitates removal.

Depraved Appetite

My cows are gnawing on boards around the yard fence, one more so than others. Give me the cause and remedy if possible.

Lake Villa, Ill. E. E. B.

Pregnant cows often chew and swallow all manner of foreign objects, notably bones, leather, crockery, rags, etc. Allow free access to salt and add bran freely to the ration of meals or grain, silage or roots, and clover or alfalfa hay. Generous, complete feeding is always advised in such cases. An ounce of bicarbonate of soda given twice daily in water may be given if medicine proves necessary. If it fails, have a veterinarian give 2 or 3 drams of iodine crystals in a capsule after a purgative has acted.

What Might Have Been

(Continued from page 81)

scrub herds in the United States are pulling down the price of milk and are putting on the mortgage. They lower the standard of the dairy world in every way and are a constant loss and detriment to not only Bill Barr himself, but to every other dairyman who tries to own profitable cows and to progress as he goes. I, too, must leave you," and the sad better-your-herd resolution which Bill Barr thought he couldn't keep to help him on and upward vanished with its mates.

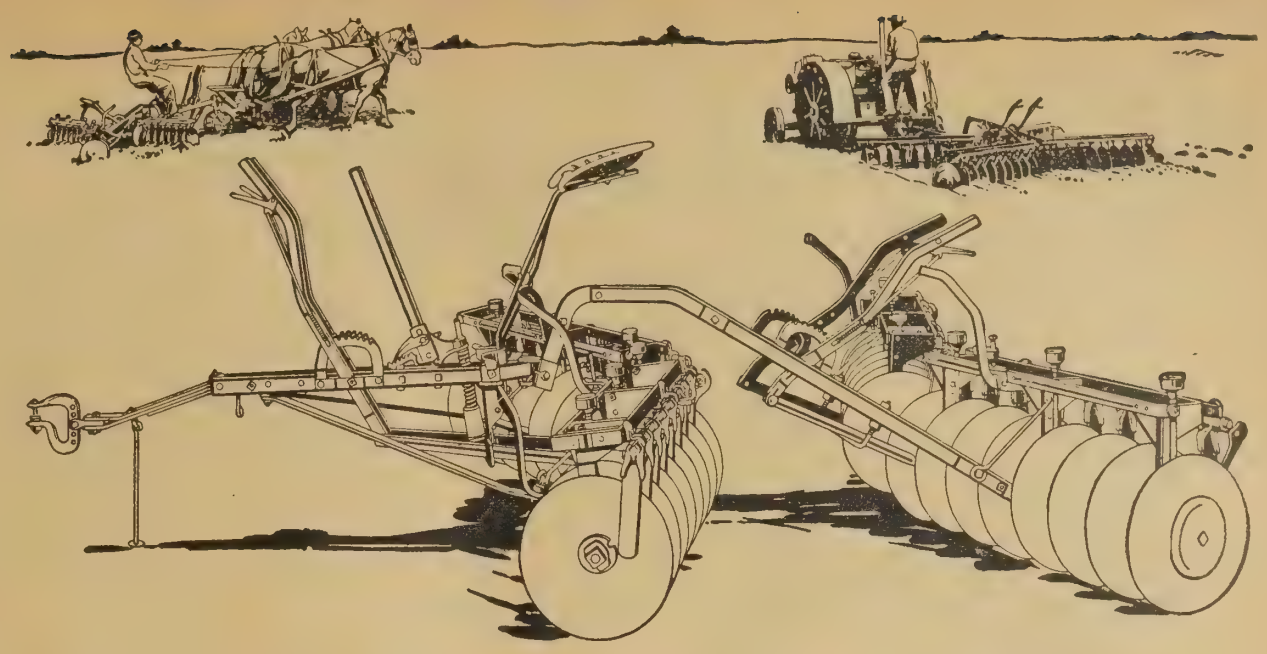
"I am the accredited herd resolution," then remarked a dim shadow quietly, "and I was called into being this new year by Dick White and others like him. These men had watched the leading communities everywhere wage the grim battle against the ravages of cattle tuberculosis and finally made up their minds that the test only would cure their herds of the last trace of this expensive disease. And so Dick White said that in 1921 he, too, would join the constantly growing procession of herds inspected by state and government. But Dick hasn't—and won't. He says he can't afford to lose too many valuable cows, after all, and so on and so on. So Dick will continue to trade in tuberculin animals and spread the enemy, which his neighbors and the government are so desperately trying to eradicate. He, too, lacks the courage and vision to see a country with its cattle free of the terrible pest and its little children running no risks from its presence. He is a bad resolver; he lacks the courage of his convictions. So I also will give up my place in the world and thousands of dairy farms will therefore remain rotten with this awful germ. I go!"

As still the army of discouraged, broken ghosts advanced to tell their tales in turn, a cry suddenly rang out, "The morning is here! We cannot live in light and among mortals. We must all die now with our stories untold. Oh, why could not our makers have allowed us to live on and do good?" And with this last despairing wail, the broken resolutions of 1921 faded into the mist.

Blasting Stumps

A short time ago I heard that a dealer in explosives was sending a truck load of dynamite into my section with a crew of expert blasters to do some stump work for one of his customers. I decided to take a day off to watch the experts and learn all I could from them.

Their method was to bore a hole under a stump with 1½-inch auger, stick a cap with a short piece of fuse into ½ cartridge of dynamite, light the fuse, shove the charge into the hole, and run. The small charge made a cavity under the stump. They then estimated the proper charge for the stump, pushed it down into the cavity; prepared another ½ cartridge as before, shoved it down on top of their charge, and again ran away.



They usually shattered the stumps but did not get them out. The reason was that their little preliminary shot loosened the soil around the roots and as they didn't tamp in their charge, they had little resistance. Notwithstanding they used much more dynamite than was necessary, they didn't get the stumps.

I asked the privilege of showing them my way. The hole under the stump was made with a narrow spade. Contiguous soil was not loosened. After my charge had been placed in position, with the primed cartridge included in the charge, the hole was completely filled with moist earth and tamped solidly from bottom to top. The end of my fuse protruded six inches above the ground.

I got my stumps out clean; used much less dynamite than they did. The experts claimed that what they learned from me was worth a great deal to them.

Tight tamping, correct estimating, and placing of charges is the secret of economical stump blasting. Too many blasters neglect the tamping, use too much dynamite, and then fail to get the stumps.

I am not criticising the work of any real experts. Some of the powder companies have some really good men on their staffs of demonstrators from whom the average farmer can learn a great deal. These men I saw operate were merely self-confessed experts of whom there are quite a good many floating around in all the stump regions of the country.—F. E. CAMFIELD, Michigan.

Two Types of Disc Harrows in One

YOU can do a good job of disking; save the cost of a new harrow when changing from horses to tractor and experience no delays when your tractor is busy elsewhere or being repaired if you use a

JOHN DEERE
PONY TRACTOR DISC HARROW

This double-action tractor disc harrow can be converted quickly into a horse-drawn, double or single-action harrow by using the hitch that we can furnish for that purpose.

Does a complete job of disking—the John Deere Pony Tractor Disc Harrow penetrates and pulverizes thoroughly because the low hitch and the low coupling between front and rear gangs hold discs to their work.

This harrow is flexible—each gang works independently—obstructions in the field do not lift the entire harrow out of the ground. And the front section is equipped with the famous John Deere third lever, pivoted yoke and powerful pressure spring—the construction that makes possible disking at even depth entire width of harrow, always—in dead furrows as well as on ridges.

Light running—no dragging around corners—the rear gangs trail properly and run steady because the reinforced gooseneck connection to rear gangs is attached ahead of the front gangs.

Can be used with any standard tractor. The John Deere Pony Tractor clevis is adjustable to suit the height of any standard tractor drawbar.

FREE BOOKS. "Bigger Crops From Better Seed Beds"—24 pages attractively illustrated—tells when and why to disc. Also describes the horse-drawn and tractor harrow to use.

"Better Farm Implements"—just off the press—a big book, 114 pages, illustrates and describes briefly the entire line of John Deere farm tools. Write today address John Deere, Moline, Ill. and ask for Package PT 414.

League Price for February Milk $2.58

The producers' price for milk in Dairymen's League territory during February will be $2.58 per hundred pounds for milk testing three per cent butterfat, at the 200—210 mile freight zone, with the usual freight and butterfat differentials. This is a reduction of sixty cents a hundredweight from the January price, or about one and one-quarter cents a quart.

The reduction in price is due to a surplus of milk caused chiefly by the continued refusal of the manufacturers to buy milk for manufacturing purposes. The milk market situation is bad. Manufacturing plants are still shut against the farmers. Many farmers are facing financial disaster because of their inability to market their milk for anywhere near what it is worth. Thousands of them have loyally refused to sell their milk to the dealers for less than the League price, or unless the milk was bought through the Dairymen's League.

There is every evidence now, however, that farmers are about to go over the top with the pooling campaign, and, when this is once in operation, it will relieve to some extent the present critical situation, and keep good cows on the farm. There is increased interest in the signing of the pooling contract all through the territory. At the present writing there are on file at League headquarters 35,274 signed contracts. A large number are still in the hands of local secretaries and will be sent in later. Therefore, the necessary goal of 50,000 is within sight and many of the farmers who have waited to see what their neighbors would do are now hastening to get in line.—Dairymen's League News.

HOLSTEINS

Selected Herd Bulls

Sired by

King Valdessa Pontiac

A son of Mabel Segis Korndyke (40.32 lbs.) and sired by King Valdessa. Three near dams three of the breed's best 40-lb. cows. Forty daughters in our herd for development. Bulls are all brothers to our Echo King Sylvia.

King Valdessa Pontiac Gem

(Born 6-22-20). His dam Pabst Cynthia 38-lb. daughter of King Pontiac Champion. Second dam a 29-lb. cow. This bull has a 25-lb. maternal 2-year-old sister. Four nearest dams average over 35 lbs. One of our very best.

King Valdessa Pontiac Piebe

(Born 2-7-20). His dam an A. R. O. 2-year-old daughter of the noted King Pietertje Ormsby Piebe, second dam a 21-lb. 3-year-old sister to three 30-lb. cows. Splendid breeding here.

King Valdessa Pontiac Lincoln

(Born 2-12-20). From a 19-lb. 2-year-old daughter of Moscrip's Johanna Bonheur Champion. Second dam, Kayewood Joyce Korndyke, 39-lb. in 7 days, also a 10-month record of 1,076 lbs. butter. State Champion. This bull is from one of our best producing families. Four nearest dams average over 35 lbs.

King Valdessa Pontiac Prince

(Born 3-25-20). From a 24-lb. 4-year-old with most 700 lbs. milk. Her dam 32-lb. with most 700 lbs. milk, making a great yearly record. Four nearest dams all above 600 lbs. milk and average 37.22 lbs. butter.

We have listed here four of our best young bulls. All from promising families and individually pleasing. Nicely colored and right in every respect.

In writing please indicate second choice. The oldest bull we have is under twelve months.

Our entire herd is under Federal Supervision.

BELL FARM Coraopolis, Penn.

Two Grandsons of Pontiac Korndyke Ready for Service

No. 1. Born February 17, 1920, a very good individual. His dam is a show cow and an all year producer. She made 24.88 lbs. butter in 7 days as a 3-year-old. Is a granddaughter of Pontiac Aaggie Korndyke. His sire is Sir Korndyke Matador, one of the best sons of Pontiac Korndyke.
No. 2. Also a son of Sir Korndyke Matador, was born Dec. 29, '19. He is a well grown, very straight individual. His dam, a maternal sister to the 24-lb. 3-year-old dam of No. 1, has a 21-lb. 4-year-old record. Both bulls priced to sell. Tuberculin tested and sold subject to a 60-day retest.
TIM H. BLOSSER, care Bell Farm, Coraopolis, Pa.

A Splendid Young Bull For $150.00

Sired by my De Kol Hengerveld Burke bull, and out of an A. R. O. daughter of King Pieter Segis Lyons 170506, an extra well bred and very promising young sire, whose 3 nearest dams have A. R. O. records as follows: 30.12, 31.06, and 33.31 lbs. of butter in 7 days. He now has 10 A. R. O. daughters, 3 of them as junior 2-year-olds made from 19.21 to 21.65 lbs. in 7 days. This calf is a splendid individual and about ⅞ white.
Write for further information and pedigree.

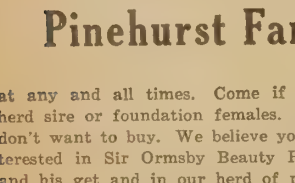
Any Breeder of Jerseys can afford to own this bull, who is a splendid specimen of the quality Jersey Crest Farms demand and produce. We would be pleased to have you come and inspect this fine fellow. Herd Tuberculosis free—under Federal supervision.

JERSEY CREST FARMS, Oconto Falls, Wis.

BUY DIRECT



Reasons for Buying Holstein Cattle in Waukesha County:

1. You can buy direct from the breeder through the breeders' association, organized by the breeders to promote the breeding of more and better Holstein cattle and to assist in a fair marketing of the same.
2. There are over 50 pure-bred Holstein sires in service in Waukesha County whose dams have records of over 30 lbs. butter in 7 days or 1,000 lbs. butter in a year.
3. There were 1,307 long-distance tests made on Holsteins in Waukesha County during the past year, which is more than the total in the next four leading counties in the state.
4. There are more tuberculin tested cattle in Waukesha than in any other county in the world.
5. The breeders' organization is in a position to put you in touch with "bred-for-production-stock" at reasonable prices.
6. When buying through the Association, you obtain the services of men who devote their entire time to the Holstein industry. It saves you time. You get more for your money.

Build Your Dairy Profits Around International Feeds

Note Protein Content

Diamond Dairy—24%

Ready Ration—20%

Special Dairy—15%

Priced Accordingly

Keep Your Cows In Milk!

The fact that the price you now get for dairy products is lower than you have been getting, and that your supply of home-grown grains is perhaps larger than usual, are not the only points to consider in this business of making cows pay a profit.

Dry cows are liabilities. So are cows that are at lower milk flows than they should be, and which could be brought up to profitable production by proper feeding.

Remember this: a dairy herd kept in prime condition and top milk flow *now*, will be the biggest producing herd when pasture arrives and feeding costs are lowest. *Planning* ahead means *acting now.*

International Feed Prices Are Down

The cost of feeding International Feeds has been reduced so that the prices you get for your dairy products will still yield you a living profit. Find out about this from your home dealer or if there is no International dealer near you, write us. But do it today.

International Diamond Dairy, Special Dairy and Ready Ration are guaranteed feeds. Their records of performance, and the integrity of the organization backing the guarantees are well and favorably known to dairymen and stockmen everywhere.

LIVE AGENTS WANTED In each vicinity where there is no International dealer the exclusive agency is open to a live agent who has the confidence of his community and who knows feeds and feeding. International Feeds are always good sellers. Write for details.

INTERNATIONAL SUGAR FEED COMPANY

Minneapolis, Minn.

Mills at Minneapolis and Memphis

No Filler

More Milk
Better Milk
Healthier Cows

That's what you get with

Pillsbury's Dairy Ration

In formulating Pillsbury's Dairy Ration, our first principle was that a ration made entirely from all high-grade and valuable materials, without a "filler" (useless material), would be most economical from the feeder's standpoint. Actual feeding tests on practical dairy farms clearly demonstrated this fact.

Pillsbury's Dairy Ration is made exclusively from high-grade materials —without a "filler". It contains no molasses, oat hulls or beet pulp, no ground hays or other disguised roughages. We believe that such roughages, if desired in the ration, can be grown and fed on the farm more economically.

Pillsbury's Dairy Ration Contains:

Ground Oats, Wheat Bran, Hominy Feed, Linseed Meal, Standard Middlings, Corn Gluten, Cotton Seed Meal, Mineral Salts, ***and nothing else.***

The eight ingredients contained in Pillsbury's Dairy Ration were selected for their feeding value alone. Every cent invested in Pillsbury's Dairy Ration goes for feed that's 100% feed—clean, wholesome, palatable, digestible and of uniform analysis. The high quality proteins are perfectly balanced for maximum milk production ***at the least cost.***

A truly balanced ration, and most profitable for the feeder.

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Fort Atkinson, Wisconsin Volume LXI, No. 4 February 11, 1921

Columbia Grafonola

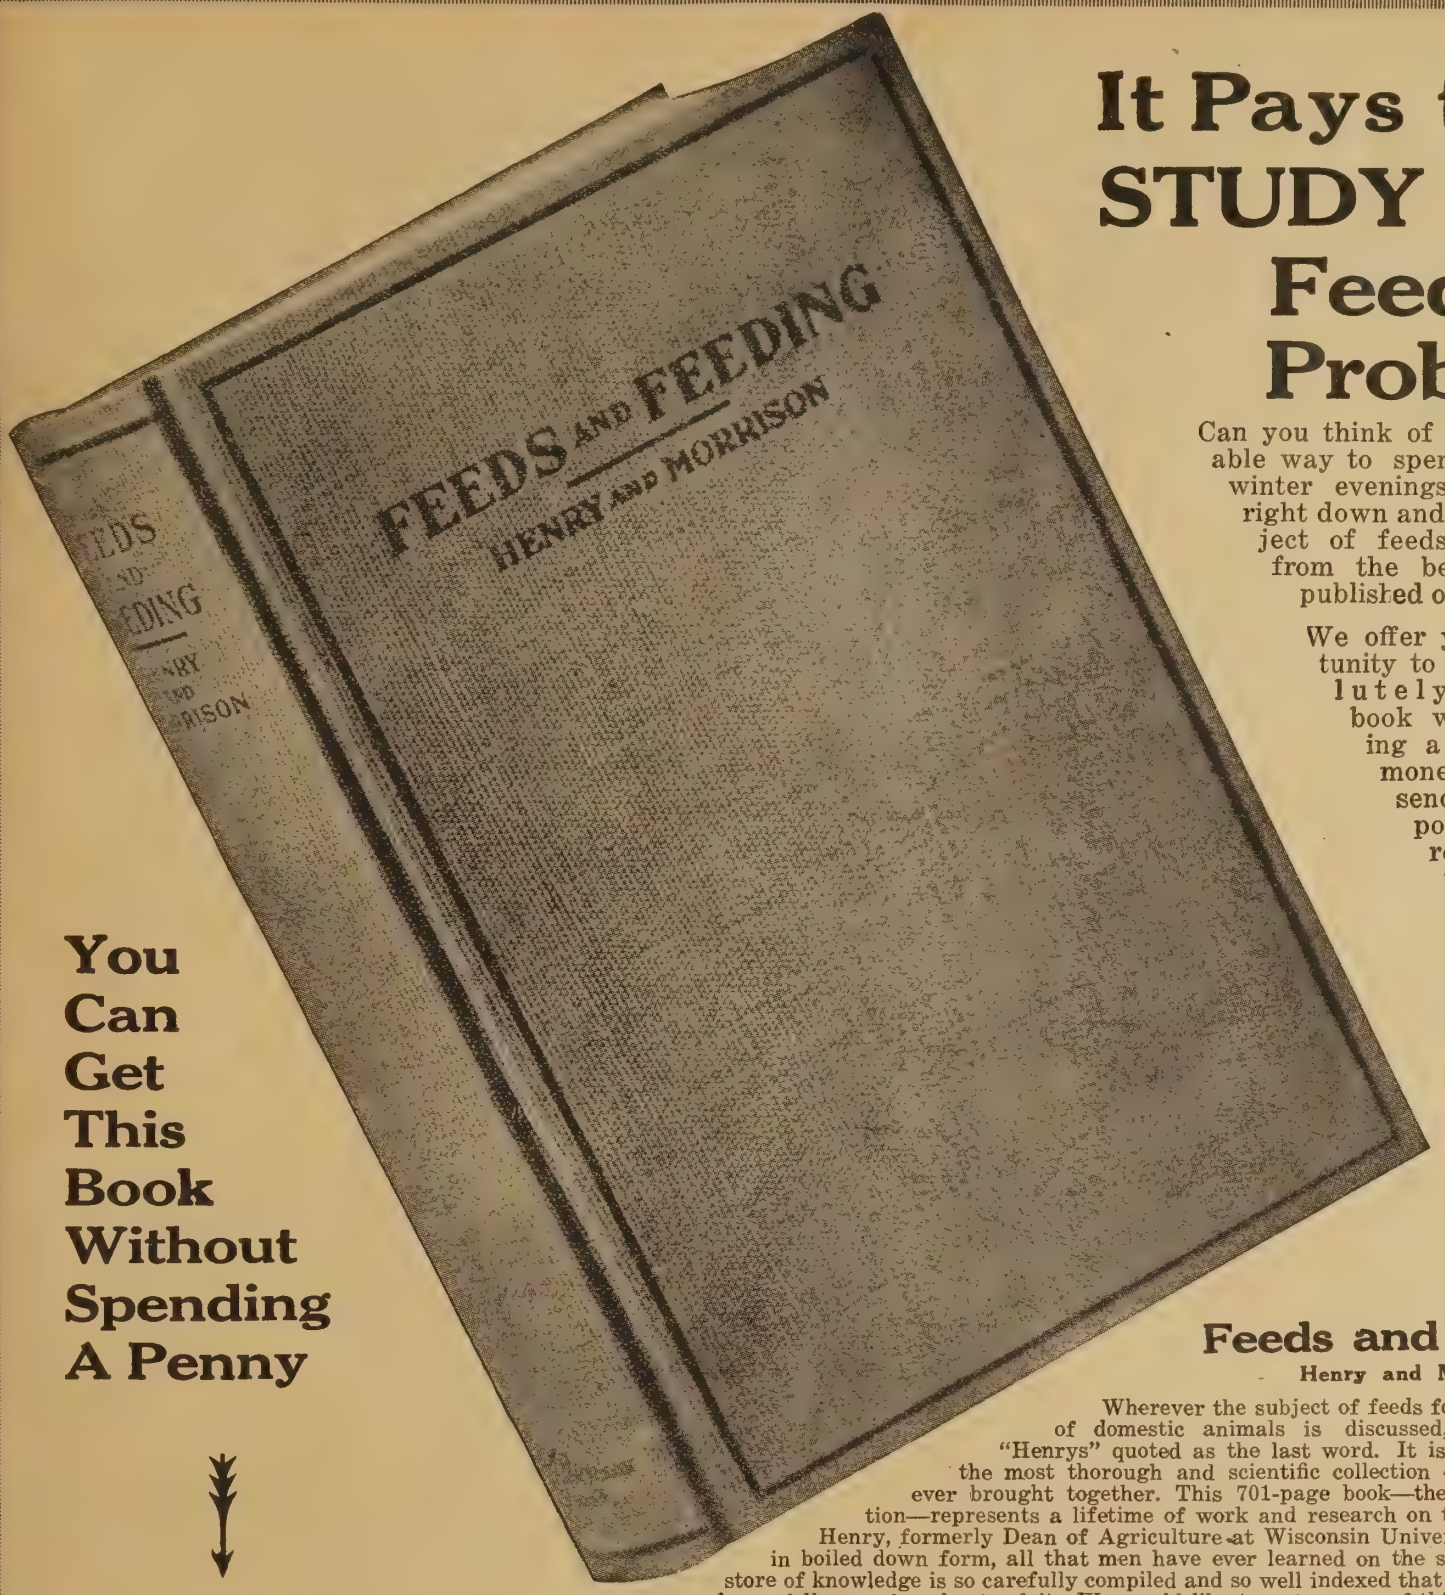
Hear Sweet Hymns and Sacred Songs at Home

Rain or shine, sleet and snow, or bitter cold, even if you can't go to church you need never be without the sacred music that soothes and comforts you.

Columbia Records played on the Columbia Grafonola reproduce so realistically all of your favorite sacred songs right in your own home that you can close your eyes and see the church.

On Columbia Records you will find the hymns that your mother and her mother sang, the hymns that you've heard on happy Sundays throughout the greater part of your life.

New Columbia Records on Sale at All Columbia Dealers the 10th and 20th of Every Month



COLUMBIA GRAPHOPHONE COMPANY, New York
Canadian Factory: Toronto

Standard Models from $32.50 to $300.00; Period Designs from $335.00 up to $2100.00

It Pays to STUDY the Feeding Problem

Can you think of a more profitable way to spend these long winter evenings than to get right down and **study** the subject of feeds and feeding from the best book ever published on this subject?

We offer you an opportunity to get this absolutely authoritative book without spending a cent of your money. We will send it to you, postage paid, in return for a favor you can easily confer on us.

You Can Get This Book Without Spending A Penny

See Offer Below

Feeds and Feeding

Henry and Morrison

Wherever the subject of feeds for and the feeding of domestic animals is discussed, you will find "Henrys" quoted as the last word. It is without question the most thorough and scientific collection of facts on feeds ever brought together. This 701-page book—the seventeenth edition—represents a lifetime of work and research on the part of W. A. Henry, formerly Dean of Agriculture at Wisconsin University. It contains, in boiled down form, all that men have ever learned on the subject. This vast store of knowledge is so carefully compiled and so well indexed that any man who can read can follow and understand it. We would like to put a copy of this book into the library of every HOARD'S DAIRYMAN reader. Price $3.85.

Here's the Offer:

WE WILL SEND a copy of this 701-page book, postage prepaid, to any reader who will send us a club of just five subscriptions. They may be either new or renewal and either one-year-for $1.00 or three-years-for-$2.00 each. YOUR OWN RENEWAL MAY BE INCLUDED IN THE CLUB.

USE THIS COUPON—TEAR OFF ALONG THIS LINE.

HOARD'S DAIRYMAN,
Fort Atkinson, Wisconsin.

As per your offer I enclose five subscriptions and remittance of $..... Send HOARD'S DAIRYMAN to the names below, and send me the book "Feeds and Feeding".

For Early Pigs Build a James Sunny Hog Barn

A. D. Severe, Dows Ia.

W. H. Strucker, West Bend, Iowa.

Geo. Herman, Norwood, Minn.

W. H. Strucker, West Bend, Iowa.

W. H. Strucker, breeder of Poland China hogs at West Bend, Icwa: "The barn erected under your plan gives entire satisfaction in every way; among a number of large barns erected in this vicinity last year it stands out pre-eminent as a specimen of beauty and architecture. It sure cuts the chores more than half."

The Jamesway of building and equipping hog barns puts vim, vigor and vitality into the little pigs--makes possible earlier litters and more pigs out of each litter raised to sturdy hoghood.

Warmth, dryness, sunshine, pure air, fresh water, cleanliness, safety and comfort are made possible by James equipment in a James Sunny Hog Barn.

This new type of hog barn has many advantages over any other; but the outstanding reason for its popularity is the peculiar arrangement of roof and windows, which puts sunshine on the barn floor seven-eighths of the time between sunrise and sunset; with a spot of sunshine and sun warmth on the floor of each and every pen two-thirds of the sunlit hours.

If the barn is placed Northwest and Southeast, spots of sunshine and sun warmth appear on the floor in the west pens as soon as the sun's rays fall at an angle of 7 degrees from the horizontal.

When the sun's rays are about 30 degrees from the horizontal, there is a spot of sunshine in every pen in the barn.

This continues until the sun's rays reach a similar angle in the afternoon.

Makes Cleanliness Easy

Not only does James Equipment make it easy to maintain sanitary conditions necessary to ward off disease, but the concrete floors, steel pens and metal devices make easy the disinfection of the entire equipment and quarters, if that ever becomes necessary.

And James Equipment saves labor in caring for the hogs and little pigs.

Dr. J. S. Johnson of Hagerstown, Maryland, writes July 30, 1920: "My James equipped hog house is visited almost daily by numerous farmers. My first litter farrowed in your pens is far superior to any I have had and I attribute it to the sanitary conditions possible with James equipment. I would like to see your equipment on every farm in Maryland."

You Can Get Better Prices at Sale Time

Because in the well lighted, well ventilated James Way barn and in the James steel pens, your hogs show off to so much greater advantage.

A home surrounded by a neat, well kept lawn will sell at a better price every time than the same house on the same ground, if the lawn be overgrown with weeds, the trees untrimmed, no flowers and the house unpainted.

A good hog in a well lighted, clean barn, in a James Way pen, will bring a better price every time than the same animal in a dark, dirty shed and old board pen.

Free Plans and Hog Barn Book

We do not build barns, but as a service to the swine industry, we designed and have applied for patent on this new type of barn which has so many advantages over any others.

Plan now to build; tell us the breed of hogs you raise, and the approximate number—or state what size barn you have in mind; if you ask for them we will send you blueprints and details from which you can build a James Sunny Hog Barn.

The 80-page James Way Hog Barn Book gives much helpful and interesting information not only regarding the James Sunny Hog Barn and James hog barn equipment, but also regarding the merits of the community hog house versus the individual hog house, the south window type of hog barn; the Iowa Sunlit hog house type, etc.
Send for this book now. Ask for Hog Barn Book No. 23.

Labor Saving Equipment for the Hog Barn

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Volume LXI — FORT ATKINSON, WIS., FEBRUARY 11, 1921 — Number 4

The Farmer and His Reading

M. H. WATSON, KANSAS

MANY farmers do not do enough reading. I believe most farmers read far less than they should. Jones has a lot of work to do. He gets up early in the morning. He must do his morning's chores and begin the day's work. Probably it does not even occur to him that he should sit down and read awhile in the early part of the day. He may read a few minutes after dinner, but he must not tarry long if he is to do even a small day's work in the corn field or in the wood-lot. He works faithfully through the short afternoon. The darkness begins to come. He does his chores. He has his supper. He sits down in a comfortable chair by a comfortable fire to read. But he very soon becomes sleepy and lays aside his paper. The next day I meet my friend Jones and something is mentioned about which he really ought to be informed. "I don't read much," he says. "I get sleepy just about as soon as I sit down with a book or a paper."

The Need for Readers

Every profession and trade should have reading, thinking men in it, men who know the facts and are able to draw wise conclusions. In periods of readjustment like the present, this is particularly true. If such men are not found in all branches of our national economic life there is nothing to save us from unsafe leaders and national ruin. Farming has attracted many of the best young men and women of the day. There are numbers of graduates of high schools and colleges in our midst.

But unless a man has some unearned capital with which to begin, he and his family will probably have to pass through a period of hard work and drudgery. Long days and years of hard work—longer days and more years for some than for others—have a tendency to make us all just common workers, toilers with the thought of leadership, of pre-eminence, almost forgotten in the cares and duties of the season.

Every man who has ever had ideals should hold onto them as a priceless possession. They give meaning and nobility to life. Keep yourself fit so that if in any way you can influence your fellow men for good, you may be able to do it. And if no large place in life is ever open to you, you may have the poise, the good judgment, the cheerful optimism which will make you a good husband, father, friend, and neighbor.

When and What to Read

The farmer's reading is one of the most important influences which hold him up to a high standard of life and living and work. There are other good influences which he has, his home, the church, his friends. There are good influences which the city man has and the farmer has not. But the farmer has within his reach the best books and the best papers and he should use them.

I do not want to advocate a reading program which will cost too much in time or money. I know how hard it is for me to spare either. The cost of what I am suggesting need not be over fifteen or twenty dollars a year and an hour a day. In bad weather and in the winter time a person ought to read more; in busy seasons he may have to read less.

In spite of its disadvantages the evening is usually the best time for my reading. Some find it better to go to bed early and then get up an hour before the day's work begins and read with clearer head and rested limbs. Still others take their reading hour after dinner or at some other time that is more convenient. I like to look forward to the pleasant hour with my books and papers when the day's work is done. A man should feel that a little time spent in reading is not stolen from his family or from his future prospects. He will probably actually accomplish more in five years or ten by reading wisely and discriminately than by working all of the time with his hands.

Reading furnishes me three things: It gives me facts, it gives me inspiration, it gives me recreation. With these things in view, let us choose our papers and books.

Shall we take a daily paper? Yes, if you can afford it and if you don't let it take up too much of your reading time. We all had to have our daily papers during the war. But I would rather have one such magazine as the "Literary Digest" or "Review of Reviews", together with a good weekly newspaper, than to have a daily paper without such a magazine. The best dailies that I have known are too much under the control of politicians and this spoils their reliability unless you are prepared to make corrections here and there from other sources. The man who reads no current literature except his one daily paper cannot do this. Then the daily prints much that is trivial, much that is uncertain. You read a good deal and you get a little like when you boil the sap of soft maple trees and try to get maple sugar. The fact that the Literary Digest comes once a week increases its value. It excels in giving all sides of the important topics of the day. It is a veritable scrapbook of opinions and you are expected to form your own after the case is well presented. The Review of Reviews is neither narrow nor partisan. It excels in giving you a real acquaintance with public men. It is splendid to feel that you and Herbert Hoover and William H. Taft and President Wilson are all fellow men, fellow patriots. It comes to the defense of people who have received much public criticism; for example, Postmaster-General Burleson. It tells in connected readable articles about the great undertakings of the day. There are other magazines of this sort. I have described these two because I know them best.

DAIRY BARN IN GUILFORD COUNTY, NORTH CAROLINA

Herd records and business methods provide improved equipment and make dairy farming pleasant and profitable.

You probably have a little newspaper published in your vicinity that is worth taking for its local news. You had better take your own church paper or "The Christian Herald". If the children are old enough, take "The Youth's Companion" and enjoy it with them.

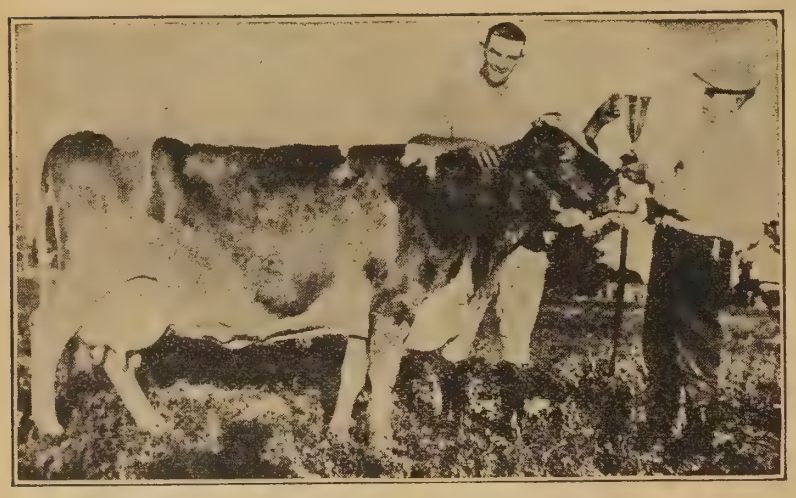
Every home should have "The Ladies' Home Journal" or "The Woman's Home Companion" or "The Mother's Magazine". The wife gets a lot of cheer and good suggestions from her paper and a good story from one of these is good for father, too tired to read most anything else. A good short story rests him and often really lifts him up.

I read our dairy farm paper and its weekly visits have made me a better farmer. I have come to feel that the theory of farming which it has preached year after year is my theory. Its rules and precepts are, in general, mine. Through it I have learned about the struggles and successes of other men whose problems are similar to mine. It might pay you to file away your farm papers. I prefer to cut out and paste into a book the articles and facts and pictures that particularly impress me. This book is more valuable to me than would be the accumulated papers of the seven years since I started it.

Two or Three Good Books

We have sent to Washington, D. C., and to our experiment station for a number of bulletins which we wanted to read. We have received much practical information by reading advertisements and by sending for catalogs and booklets occasionally. If you are a breeder of Jerseys, send to the American Jersey Cattle Club and get their inspiring little booklets about your breed of cattle. The Holstein Association will be glad to tell you all about the white and blacks, and every Holstein man ought to give them a chance to do it.

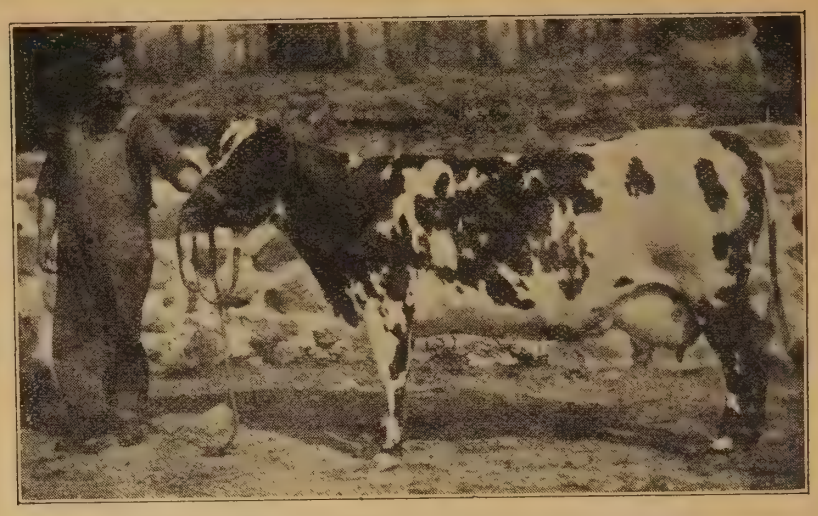
I try to read two or three good books a year. Most of the books I refer to now are fiction, but some are poetry, biography, or history. They are books that have no particular bearing on my business. One of the first books of this sort that I read was "John Halifax Gentleman" and about the same time I read "Ivanhoe". I was a boy then and I love those books. I also read in those days the autobiography of U. S. Grant and I'd be glad to have my boys read it some day. Among the more classical books that I have read in later years are "The Pickwick Papers", "David Copperfield", "Henry Esmond", "The Virginian", "Rob Roy", "Quo Vadis", and "Les Miserables". Among the lighter and easier books on my list are a few of Joseph C. Lincoln's delightful stories of the Cape Cod folk, "The Winning of Barbara Worth", "The Iron Trail", and "The Peace of Soloman Valley". Ambassador Girard's book, "My Four Years in Germany", is not fiction but it is just as interesting.



There is another class of books that well repay the time they take, but they have to be really studied. One such book I received as a Christmas present from my brother recently, "The Productive Feeding of Farm Animals", by F. W. Woll. In studying such books it pays me to make a few notes on a slip of paper to be carried in my pocket and referred to at odd times. These little notes in my pocket are very easy to manage when I am plowing for wheat with horses on a hot August day or in most any field work.

Read of Nature

I once undertook to study astronomy without a teacher and all I know



(Continued on page 150)

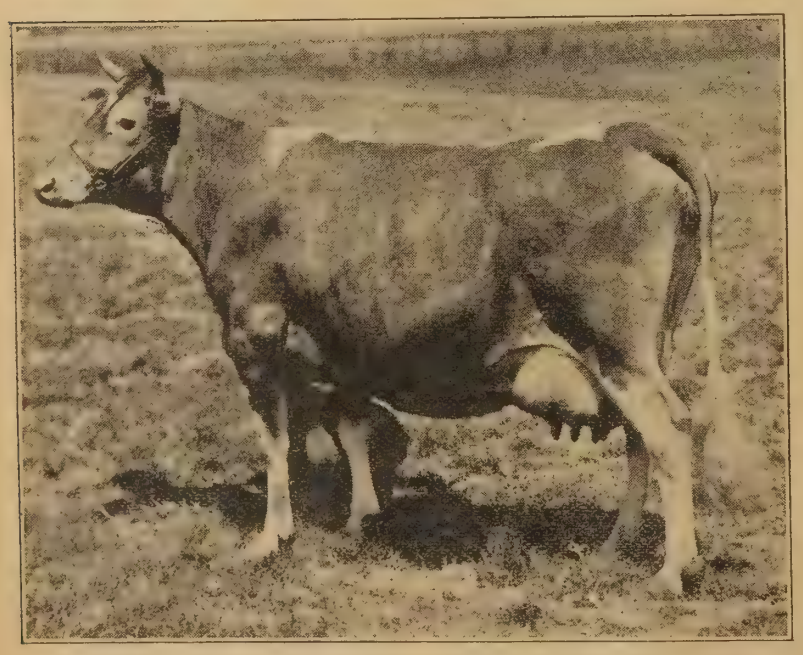
HEAVY PRODUCERS FROM FOUR BREEDS

PRINCESS OF MEADOWBROOK, GUERNSEY COW OWNED BY BRANT RANCHO, CALIFORNIA

She has two fat records which average 733.5 lbs. Her milk and cream were given the only scores of 100 per cent ever made at the National Dairy Show. She was grand champion at the 1919 and 1920 California State Fairs.

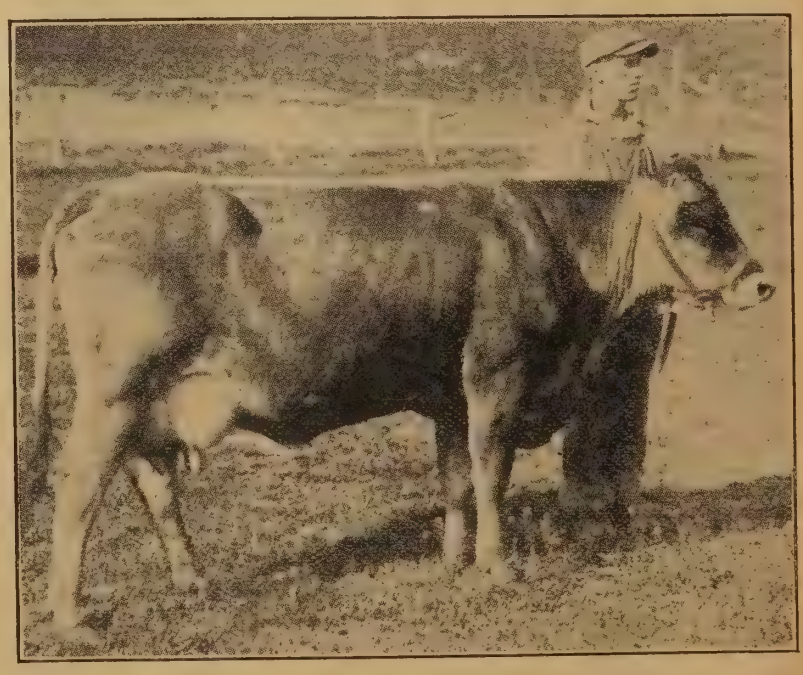
ROSELLA WEBB, AYRSHIRE COW OWNED BY MIDDLESEX MEADOWS FARM, MASSACHUSETTS

This cow has just completed her fourth consecutive A. R. test, making a production of 16,650 lbs. milk, 675.53 lbs. fat. Her four records average 13,476 lbs. milk, 557.1 lbs. fat. She is by Earl's Choice of Springhill, one of the ten leading sires of the breed.



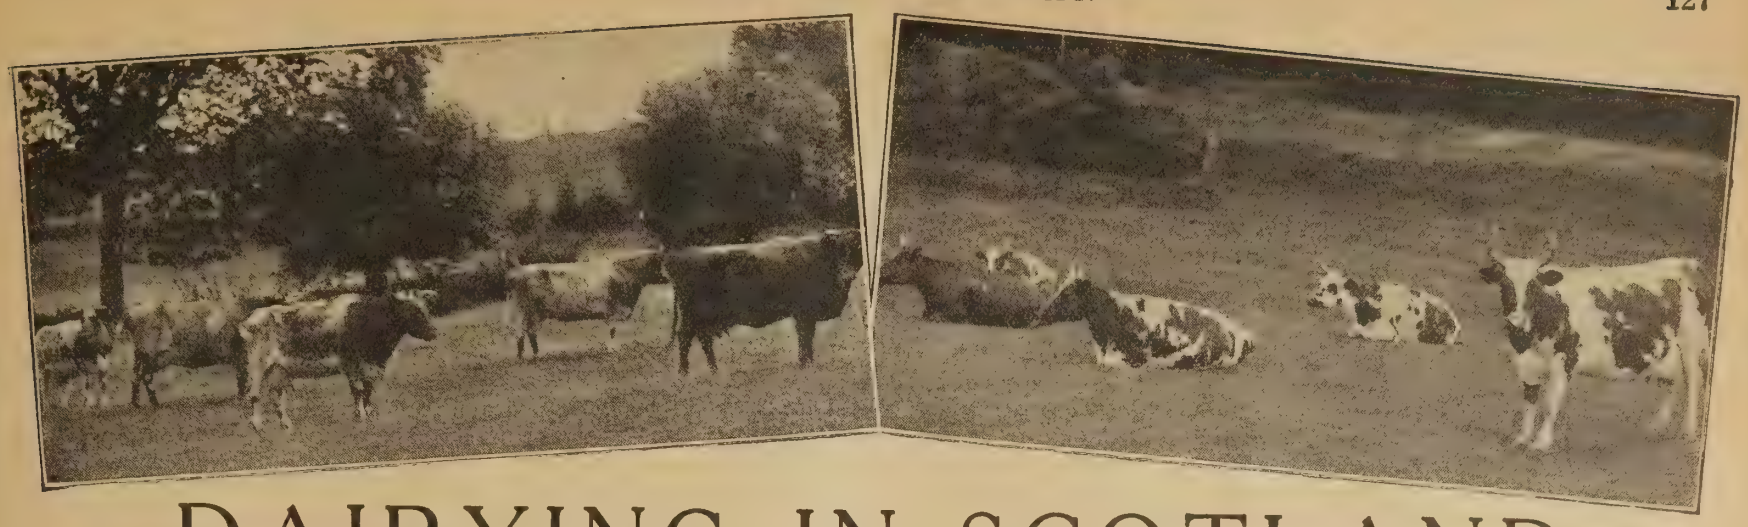
BELLEMORE TOPSY 2ND, HOLSTEIN COW OWNED BY Z. C. THOMPSON, JR., KANSAS

Mr. Thompson is the first to make official tests in Harper County. In 7 days this cow made 532 lbs. milk, 20.3 lbs. fat.



THE GUERNSEY COW, CELESTINE MAY ROSE, OWNED BY WOODEND FARM, MINNESOTA

She has completed a record of 10,218.6 lbs. milk, 480.48 lbs. fat as a junior 4-year-old.



CORA OF GERAR, A GUERNSEY COW OWNED BY SHOREWOOD FARM, MINNESOTA

Her fourth official record is 16,958.2 pounds milk, 734.54 pounds butterfat in Class AA. This production entitles her to eighth place in her class. Her four records average 13,803.4 lbs. milk, 625.17 lbs. fat. The total, 55,213.9 lbs. milk, 2,500.7 lbs. fat, is the breed's greatest cumulative record, considering three records are double letter.

BROWN SWISS COW, MASTER'S BERNICE, OWNED BY W. O. BOHART, MONTANA

As a two-year-old this cow produced 10,499.5 lbs. milk, 364.5 lbs. fat, in eleven months. Her caretaker, A. E. Dean, is shown holding her. He cared for 20 cows on test and milked some of them in the field in summer to save their walking to the stables.

DAIRYING IN SCOTLAND

A. C. McCANDLISH, IOWA

TO the "Pussyfooters" Scotland is a land of Presbyterian churches and "Pubs", though the miners have recently voted certain sections "dry", while the main attractions for the "Tramp Abroad" are generally scenic rather than agricultural. Many of these delightfully deluded individuals are unaware of the fact that the highlander piping the Reel o' Tullochgorum at the entrance to his native glen, as the tourists coach past and contribute to his support, was probably raised in the smoky fastnesses of Glasgow or even in Packingtown, Chicago, and imported to the Highlands for the special purpose of bleeding suckers. If Scottish agriculture is to be seen in its true light, the rut made by the flivver of the tourist agent must be avoided.

Scottish agriculture is extremely variable as climatic and soil conditions are far from uniform. The country is only about half the size of Iowa yet more types of farming are found than in all the middle west. The rainfall varies from less than 40 inches on the east coast to over 140 inches per year in the northwest. In the dairy region in the southwest, 40 inches is about the normal annual rainfall and it is well distributed throughout the year. The drier sections in the east are given over mainly to grain farming and beef production, while in the northwest and extreme south sheep raising is the most important branch of agriculture. There are also certain localities of limited area where specialized branches of agriculture, such as potato raising and fruit growing, are extremely important.

Superficially, Scotland appears to have changed little in recent years but a study of agricultural conditions shows this to be a false impression, as changes, and many of them marked ones, have occurred, and perhaps nowhere are these more noticeable than in the dairy world. The full extent of these changes cannot as yet be appreciated nor can it be foretold if they are all for the ultimate good of the industry. A few changes which should have taken place are apparently in the distant future.

Land and Labor

Land and labor conditions are at present in a state of flux throughout Britain though in perhaps no section are conditions acute so far as the dairy farmer is concerned. The Scottish dairy farmer is in the large majority of cases a tenant holding his land under a long lease and with little desire to own the land which he cultivates, partly from an inborn desire to allow conditions to remain as they are, and partly because of the fact that all landowners are heavily taxed at the present time. In many cases the taxes and the outlay for the upkeep of buildings, fences, and other permanent items which must be maintained by the owners are greater than the rental value. Consequently where the lease is such that the rent cannot be increased, the farmer is better off renting than owning the farm. The existing conditions are causing the breaking up of many of the large estates and some of the farmers are buying their farms at the remarkably low figure of $100 to $150 per acre, to prevent outside men from buying and then ousting them at the end of the tenancy. A more equitable distribution of taxation among the large and small landowners would induce a greater number of farmers to purchase their land.

An important factor in dairying is the supply of milkers. In Scotland they are recruited mainly from the ranks of the women. They receive $2.50 per week for milking 10 cows, night and morning, and for each additional cow milked the stupendous sum of 25c weekly is paid. This seems a remarkably low wage, but it is large when compared with the prewar stipend of 75c per week for milking 10 to 12 cows. Though milkers are poorly paid, milking machines are becoming fairly common. In fact, on many farms they have been in use for 12 to 15 years though on others they have been put in for use only in emergencies.

A considerable rise in general farm labor costs has also taken place but even yet workers of this class are not too highly paid. In 1914 a very common wage for men was $3.50 per week, with a house and a few extras, and the total wage, including a fair valuation for the house and other items allowed, was about $5 per week. In addition the wife and older daughters of the worker usually milked and the younger members of the family, which generally was not small, worked in the fields during the busy seasons for 25c per day of ten hours. Now conditions are changed, the eight-hour day is the general run, with a half holiday on Saturday except in haytime and harvest, and the minimum wage, as prescribed by the Corn Production Act, is $12 per week, including prerequisites, for a man over 21 years of age.

At one time the "bowing" of cows was quite prevalent and it is still to be found on some cheese farms. Under this system the farmer provides the buildings, cattle, and a stipulated amount of feed while the "bower" provides the labor. The farmer gets his returns in the form of a cash or cheese rent. This custom was gradually dying out, as it does not give the farmer the control over his stock and labor which he generally desires, but labor scarcity during war times induced many farmers to resort to this system as it relieved them of labor troubles to a considerable degree. However, the majority of farmers prefer to control their cattle directly and pay their dairyman a stipulated wage to do all the work needed around the herd with the exception of the milking. The farmer hires and pays the milkers while the dairyman does the general work with the members of his family.

Types of Dairy Farming

Though the main dairy section of Scotland is in the southwest, other important dairy regions are to be found surrounding the large cities in other parts of the country. In all of these market milk localities, with one exception, conditions are very similar. The main object in such districts is milk production and very little is done to maintain the herds with home grown heifers. The calves are vealed or a bull of a beef breed will be kept and the calves sold to be raised for beef purposes. In such districts, it is needless to say, real constructive dairymen are scarce—they are simply milk producers out for the money with little real love for their work and no idea as to what real constructive breeding means.

The conditions under which they work indicate this. They do not mind hard work as many of them milk at three o'clock in the morning and then haul their product to the city immediately and very frequently make a second delivery after the afternoon milking. They simply raise and produce feed and convert that into milk with the aid of purchased cows. They are not the real dairymen of the country. A large amount of the milk produced on such farms is sold to wholesale men in the cities though some of the farmers retail their own product. In a few cases they also sell butter, which generally indicates that the evening's milk is skimmed before being mixed with that produced in the morning. Fairly stringent legislation keeps this practice at a minimum, however.

In the Edinburgh district much of the milk used in the city is produced under a different set of conditions. The cows are kept within the city limits and all feed must be purchased and in addition the regulations of the sanitary authorities necessitate the daily removal of the manure without the confines of the city. Under such conditions the raising of the stock necessary to maintain the producing herd is impossible. Fresh cows are purchased on the market or from districts at a considerable distance from

(Continued on page 154)

AYRSHIRE COWS, IN THE HERD OF JAS. HOWIE, SCOTLAND, WHICH GIVE 1000 GALLONS OF MILK PER YEAR

Washington, D. C., Weekly News

[SPECIAL TO HOARD'S DAIRYMAN]

WASHINGTON, FEB. 1—The emergency tariff bill retains its place as the unfinished business of the Senate, in spite of filibustering tactics by various senators opposed to the principle of the tariff on agricultural products. Senator Penrose has taken up active leadership in an effort to force the bill through, and is said as this is written to have the signatures of forty Republican senators to a demand for the enforcement of a seldom used closure rule to shut off filibustering. There are votes enough to pass it if a vote can be had, for asking an immediate disposition of this important measure, because of the big appropriation bills awaiting consideration.

Senators Thomas of Colorado, Harrison of Mississippi, and Underwood of Alabama are leading the opposition. Senator King of Utah has also made a speech in opposition, but has not joined in the obstructive tactics. Senator Lenroot of Wisconsin has written friends of the dairy tariff item in the bill that he is in favor of its enactment.

⚜

Senator Knute Nelson of Minnesota has resigned as member of the Conference Committee to which the Capper—Volstead bill has been referred. Senator Nelson is chairman of the Senate Judiciary Committee which added the objectionable amendment, forbidding co-operatve associations as approved by the bill to "create monopolies" which, according to the sponsors for the bill, weakens it to the extent of making the measure of less value than the present law. His resignation from the Conference Committee was a surprise to everyone interested. Vice-president Marshall named in his place Senator Walsh of Montana who is a Democrat and is understood to hold views even more antagonistic to the Capper—Volstead measure than Senator Nelson. Senator Nelson's attitude in standing firm for the retention of the Senate amendment was made the basis of strong efforts on the part of the American Farm Bureau Federation to bring sufficient pressure from the Farm Bureaus in Minnesota to cause him to modify his views. This was ineffective and he had personally served notice on the Washington representative of the Farm Bureau that his mind could not be changed in this way. The reason given by the Minnesota senator for his resignation is sickness in his family. The Capper—Volstead bill is still in conference, and the conference is said to be deadlocked. The National Grange in its bulletin issued this week makes a statement credited to Representative Volstead of Minnesota correcting a previous statement that the House was responsible for the second amendment which is opposed by the representatives of farmer organizations, the one which substitutes the Federal Trade Commission for the Secretary of Agriculture as the supervising authority in the bill. This amendment, too, was added in the Senate sub-committee.

⚜

The House Agricultural Committee is considering the Packer control bill, which passed the Senate, January 24. The bill might be finally passed at this session, if it can get through the House without amendment. If it is delayed, or amended, so it will be compelled to go to conference, there is not time enough to pass it. Hence every packer advocate is trying to amend the bill. Many others who honestly think the bill is defective and who are not pro-packer are also in favor of amending it, so its course is a stormy and tortuous one. The committee by a tie vote refused to hold any more hearings, and by a tie vote has refused to accept several amendments. The sessions are becoming heated and somewhat bitter. Up to this time not enough votes have been mustered to report the Senate bill favorably. It is hoped, however, by the forces fighting the packers, that this will be done this week. Chairman Haugen has given up his own ideas of amending the bill, and is fighting for a favorable report. Opposition to the bill is led by Rainey of Chicago, with McKinley and Wilson both of Illinois aiding and abetting, while Riddick of Montana and McLaughlin of Michigan have both asked for certain amendments. Hutchinson of New Jersey and Ward of New York are other members of the committee who favored amendments and delays.

⚜

There is no public announcement growing out of the recent opinion of the Attorney General holding that butter made after the use of neutralizers is adulterated butter. It is rumored that the Attorney General has been asked for a reconsideration, so that persons familiar with the methods of butter manufacture may present the plain facts to his attention, in an effort to get an opinion less sweeping and general in character, and more definite and discriminating. It is also stated that the word has been given out that a thirty-day stay has been unofficially agreed upon before any test case will be enforced. Such action as seems likely to be resultful and constructive is a request that the sweeping terms of the opinion be made definite and explicit as to the wide differences of practice which exist ranging all the way from the careful and seemingly harmless use of an alkali to condition cream for pasteurization to the use of chemicals to eliminate results of real decomposition. The original ruling bars the entire practice, as it is most easily interpreted. There is a large number of prominent persons in the butter industry who hold that the question of adulteration should rest on the condition of the finished product and what it contains, rather than on the methods of manufacture. Certainly if the methods of manufacture, the condition of the raw product, and the nature of the chemicals used in the manufacture of butter substitutes are accepted, there could be no objection, by comparison, to any of the methods used which produce palatable butter, which is all butterfat and which holds its full content of vitamines and the same food value as other butter.

⚜

The Dairy Division is preparing for a Use More Milk Campaign in Akron, Ohio. Miss Jessie Hoover of the Dairy Division office of extension is in charge, and co-operation has been arranged between the dairymen's association, the milk distributors, the Board of Health, the Chamber of Commerce and the various community and consumer organizations. The campaign comes next month.

⚜

Maryland—Virginia Association officers are planning a milk plant in the near vicinity of Washington to handle the surplus likely to develop this spring in this territory. Manager McLaughlin of this association has the plans well in hand, and they have the tentative approval of the executive committee. Further official announcement is expected soon.

⚜

The House Committee on Foreign Affairs voted on Friday last to report out the resolution offered by Congressman Browne of Wisconsin authorizing the President to invite foreign countries to send delegates here to a World Dairy Congress in 1922. The committee gave a brief hearing on Thursday at which it developed that it would not approve a resolution authorizing this invitation which might involve considerable expense. The hearing was continued until the following day, when Congressman Browne offered to amend by inserting a proviso to the effect that this resolution did not create any financial responsibility. This was accepted by the committee as proper. B. H. Rawl and C. W. Larson of the Dairy Division made brief statements as to the advisability and desirability of this congress, and A. M. Loomis, Secretary of the National Dairy Union, and Milo D. Campbell, president of the National Federation of Milk Producers' Association, told the committee of the formation of the temporary committee in Chicago, at the National Dairy Show, to work out the plans for such a congress. The committee vote was unanimous in support of Congressman Browne's resolution. There will be no action in the Senate until the House passes this resolution, making it urgent that there be prompt consideration if possible.

Pennsylvania Dairymen at Harrisburg

HOARD'S DAIRYMAN: — Dairymen from all parts of Pennsylvania met at Harrisburg the last week in January to attend the Fifth Annual Farm Products Show. Starting five years ago with only five thousand feet of space, this show has grown until this year it was thirteen times as big. With nearly seventy thousand square feet of space available many things had to be omitted. This is more space than Harrisburg can properly handle and sentiment on all sides is growing for a state fair befitting a commonwealth which, although largely noted for its industries, is in reality the sixth agricultural state in the Union. While dairy products have always had a prominent place at this show this was the first year dairy cattle appeared and it also marked the first annual meeting of the State Holstein-Friesian Association.

⚜

The dairymen of Pennsylvania are optimistic. Of course they feel the recent drops in the market prices for their products but they know they are not suffering alone, and have set their minds and hearts to work for a better future. When they think of the February price for New York milk of $2.98 a hundred, they feel good over the basic Philadelphia price of $3.68. President F. P. Willets and Secretary Robt. W. B. Balderson, of the Inter-state Milk Producers' Association, which handles the business of the Philadelphia territory, spent almost the entire week at the Association booth. One of the most notable new members is the Governor of the State, William C. Sproul, who signed for his dairy of 40 cows on his home farm in Delaware County. The Association had a striking exhibit showing the value of milk. Thousands of city people stopped to admire it and learn its lesson. It is to appear in several prominent store windows in the Philadelphia shopping district.

The dairy cattle exhibit was educational rather than competitive. To drive home the truth that a daughter can be better than her dam if a tested and worthy sire is used, seven choice Holstein-Friesian cows and a splendid pure-bred bull were there with accurate records hanging over all of them. In each case the daughters showed marked increase in yearly milk and fat production over their dams. This exhibit was from the state hospital farm at Warren and was part of one of our leading accredited herds. Although this state now claims to lead all the others with 21 bull associations having in them 98 animals of meritorious breeding, we still have need for many improved sires. Chester County, our leader in dairying, recently undertook a better sire campaign and is working hard to have only pure-bred bulls at the head of all its herds.

AAGGIE PERFECTION SECOND, HOLSTEIN COW OWNED BY L. G. GLEIM OF IOWA
This cow at 12 years of age has produced 23,000 lbs. of milk containing 840 lbs. of fat. This is held to be the world's record production of both milk and fat for a cow of that age.

The old story of the difference in cows, alhough they may look alike to the casual observer, was repeated for those who are slow to learn. Six cows were there from a cow testing association and their differences ran from the one with a yearly fat record of 148 pounds giving a return of $20.63 above feed cost, to the one which gave 419 pounds of fat with a return of $163.02 above the feed cost.

⚜

As a concrete example of what the 241 members of boys and girls dairy cattle clubs of the state are doing, the Point Township Club (Northumberland County) exhibited six fine

(Continued on page 140)

Dairying Thirty Years Ago

Taken from the Issue of Hoard's Dairyman of February 13, 1891

The total gross cash income per cow for the animals contributing to the Connecticut creameries the past year has been $43.20.

⚜

It has been found that corn meal and middlings will not make 4-cent pork at a profit in New Hampshire—but that 20-cent skimmilk will do it. The Wisconsin Experiment Station has found that to mix meal and milk pays far better than to feed either exclusively.

⚜

Mr. Henry Chase of Decorah, Ia., is the sort of a dairyman that is valuable to have in a community as a practical example. During the past year he has kept an average of 9 cows and has derived an income therefrom of over $500. He took the precaution in the first place to have good cows. One such dairyman is worth more than a whole county full of the sort who "let things flicker" and take what they can get.

⚜

Mr. H. E. Stockbridge of the North Dakota Agricultural Experiment Station writes a hopeful letter in regard to the opening of their special course this winter by which it appears 28 young men in that new land are in attendance. Mr. Stockbridge adds that "is a larger number than has been obtained at any other single special course of instruction similar to that undertaken here." Quite a start; but if he will read the Dairyman of the 6th of February, he will see that the Wisconsin Experiment Station had 70 scholars in its special school; but perhaps he can "hedge" a little, because of the fact that part of the Wisconsin students are studying dairying only.

⚜

A valued subscriber says well when he says he does not always agree with the Dairyman; and adds: "But this is just what we want—an exchange of views from sensible men." That is it, exactly, and when we compare this broad catholic spirit with the fears of pigmies who are afraid, the vigorous expression of an honest opinion will topple down the pillars that uphold the temple of truth and progress; we can but pity the pigmies and thank God for those true and brave. The man who is afraid of the expression of a view that is adverse to his own can't have a great deal of confidence in the soundness of his own position. It is well to get rid of all positions that you do not feel you can stand up to the rack, like a man, and defend. A man ceases to make an indentation on a hoary old wrong the moment he begins to give it light taps or ceases to hammer at all.

Scores on Milk in Los Angeles

Milk scores made by the Health Department of Los Angeles give some very interesting information on the quality of milk being distributed in that city.

Scorings of certified milk, which is raw milk produced under the supervision of the Medical Milk Commission of the city and which must not contain more than 10,000 bacteria per cubic centimeter, showed an average for the three best samples of 94.7.

A score of 95.3 was the average for the three best samples of "guaranteed milk". This milk is raw milk guaranteed by the producer with the written permission of the city of Los Angeles. It must have a bacteria content which does not exceed 25,000 per cubic centimeter.

The best three samples of Grade A raw milk averaged a score of 96.7. This is from tuberculin tested cows and must not exceed 100,000 in its bacterial content.

The three best scorings of Grade A pasteurized milk averaged 94.6. This grade of milk has been heated to a temperature of 142°F., held for 25 minutes, and then rapidly cooled to below 50°F. Its bacterial content can not exceed 15,000 per cubic centimeter after pasteurization or 200,000 before.

Grade B milk, that which is sold in cans to restaurants and wholesale trade, must contain less than 1,000,000 bacteria per cubic centimeter before pasteurization and less than 50,000 per cubic centimeter after pasteurization.

The card used in these scorings allowed 35 points for bacterial count, 15 for flavor and odor, 16 for absence of sediment, 15 for butterfat, 15 for solids not fat, 5 for acidity, and 5 for appearance of package.

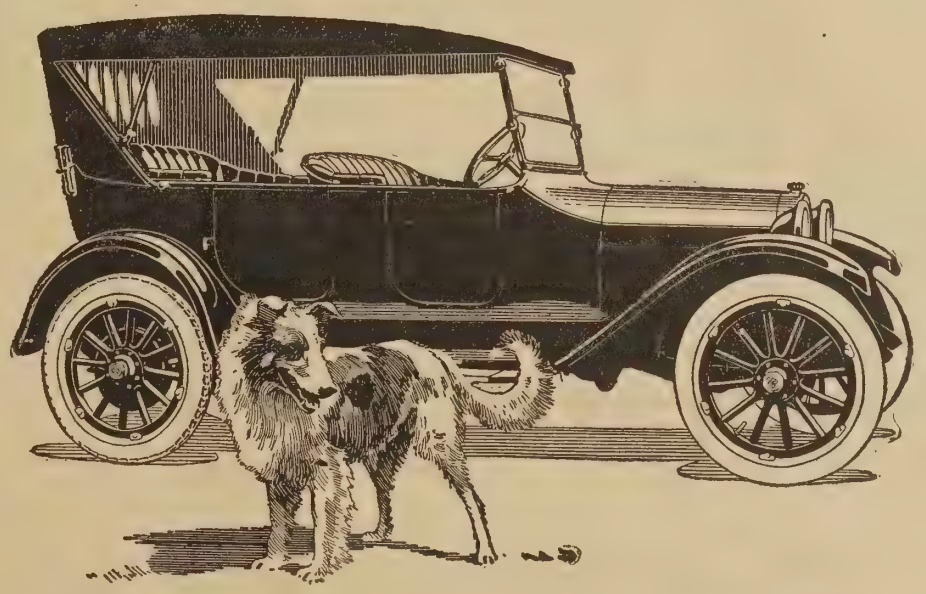
Final scorings were made under the supervision of R. J. Posson of the United States Department of Agriculture, Dr. A. S. O'Banion, and J. C. Marquardt of the University of California.

Jersey Cattle Notes

For week ending Jan. 21.

Number of animals registered: bulls, 175; cows, 610; total, 785. Number of transfers recorded: bulls, 145; cows, 596, total, 741.

DODGE BROTHERS MOTOR CAR



When you inquire into the wonderful hold which Dodge Brothers Motor Car has upon its owners, you will find that its popularity is due to the simple qualities which make any commodity valuable

It can be relied upon to do all that the owner wants it to do every hour of every day it is in service, for months and years

In short, more than half a million people are driving Dodge Brothers Motor Car because Dodge Brothers Motor Car is undeniably good value

The gasoline consumption is unusually low
The tire mileage is unusually high

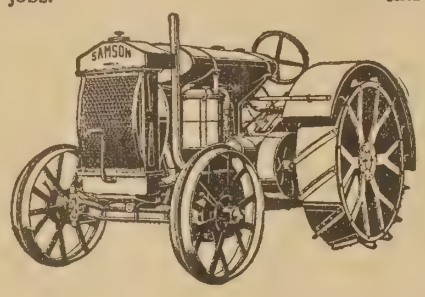
How Much Do Idle Horses Cost You?

Fifty-six per cent of the pulling jobs on the farm are done with two horses. This is shown by actual investigation. Count up and see how many times your farm jobs require more than two horses.

Yet you have to keep four, six or more for your maximum horse power requirements.

How much do idle horses, kept to meet your occasional peak load, cost you? Their expense goes on just the same whether they are working or not.



Idle horses are nonproducers. The feed and pasture they require would keep more cows and return you a big profit.

Did it ever occur to you that you could get rid of some of your horses—and do more and better farming, at lower cost, with Samson Tractor Power? Deeper, more rapid plowing, quicker tillage work and planting, speedier harvesting, all done with a margin of cost saved on every field operation. Tractor belt work saves time and labor on the small jobs.

A tractor is not an added expense to your farm. The horses it replaces equal a good part of its first cost. The elimination of horse feed, pasture and lost time pays the cost of the tractor operation with such a wide margin of profit that the tractor is soon paid for. And the tractor will pile up profits year after year.

The Samson Model "M" Tractor is the profitable tractor for the great majority of farms. Thousands of Samson Farmers have proved it this last year by making a profit under the most unfavorable market conditions. They saved on horses—saved on help hire—and made every acre and every head of ive stock count.

How to cut down YOUR operating expenses—and make YOUR farm pay more—This is your problem this year.

Write Us Today For New Information

which will help you to lower your operating costs and increase both the quantity and the quality of your yield. Write us now. A post card will do. No obligation.

Some Notes on the Tuberculin Test

E. G. HASTINGS, Wisconsin College of Agriculture

AT the recent meeting of the Wisconsin Dairymen's Association, inquiries were made that indicated to the writer that many of the aspects of tuberculosis, as it occurs in the domestic animal, are not as well understood as they should be if proper progress is to be made in the fight against this disease which is of such great economic importance in our country.

One of the questions asked by a man with many years' experience in breeding cattle referred to the fact that some of the animals that have reacted to one or more tests now in common use do not show evidences or lesions of the disease on careful examination of the tissues. The answer made by the representatives of the Bureau of Animal Industry of the United States Department of Agriculture was, in substance, as follows: On the killing floors of the packing house it is impossible to examine all parts of the body that may be affected. The examination is made chiefly for the purpose of determining the fitness of the meat for human food. The inference was carried that if the examination could be more detailed, and if a microscopical examination of the tissues could be made, in many and probably in the majority of cases, evidences of the disease would be found. The afternoon program was concluded by the slaughter of a reacting animal from a herd in which tuberculosis was known to be present. The post mortem examination revealed no evidences of the disease, a fact disconcerting to those giving the demonstration and tending to arouse doubts in the minds of those witnessing the examination.

The demonstration seemed to indicate that the tuberculin test had failed, that it had judged as guilty an animal that was not guilty of having tuberculosis. Possibly this was true, but probably not. It is quite certain, however, that the test does sometimes fail in detecting the tubercular animals. From the standpoint of the breeder this failure is infinitely more important than its failure in the opposite direction, namely to adjudge what seem to be healthy animals as tubercular.

The reaction to tuberculin is a phase of a subject that has many ramifications, and is gaining in importance each year: namely, the sensitization of an animal to compounds, chiefly proteins, from some other living thing. The sensitization may occur by the artificial injection of the substance. For example, a guinea pig may be sensitized to egg white by injecting a minute quantity into the tissues. The sensitization is made apparent by the fact that if within a few weeks after the first injection a second is made a violent reaction follows, the animal has difficulty in breathing, and often death occurs in a few moments. The reaction to the second dose varies widely in its intensity in the guinea pig, and still more widely when larger animals are used. Other manifestations of the same phenomenon are such diseases as hay fever, due to an acquired sensitiveness to the pollen of certain plants, and asthma, due often to the sensitization to substances of animal origin, such as dust from the skin of the horse. The manner in which the sensitization occurs is unknown. Ways have been devised by which the original source of the sensitizing substance can be determined. This accomplished, the sensitiveness can be overcome. The individual is said to be desensitized, and the hay fever or asthma appears no more. It is common knowledge that hay fever occurs in all degrees of severity, as does asthma. In other words, the degree of sensitization varies from such a slight degree that the disease is not recognized, to that in which the individual is very ill when brought in contact with the sensitizing material.

It is common knowledge that the use of certain foods causes serious disturbances in some people. The eating of strawberries may result in a rash over the entire surface of the body. Many people can not eat eggs. It is believed that such incidents represent cases of sensitization to the particular food.

The tubercular animal is sensitized to the tubercle bacillus or to its products. When the latter are introduced in relatively large amounts, as is done in any of the tuberculin tests, a reaction of varying degrees of severity occurs; a variation in the temperature of the animal when the tuberculin is injected beneath the skin as in the subcutaneous test, in the extent of swelling in the intradermal test in which the tuberculin is injected into the skin, or in the inflammation of the eye in the ophthalmic or eye test.

The interpretation of the test demands judgment as to how marked a reaction shall occur before the animal is said to have reacted to the tuberculin. Somewhere a dead line must be drawn; on one side the animals are said not to have reacted, on the other side they have reacted. Admitting that all degrees of sensitiveness exist, all degrees of reaction will follow. The results will therefore not permit of the division of the animals into two groups, one healthy and the other tubercular. Among the nonreacting or supposedly tubercular-free animals are likely to be found some tubercular ones.

Dr. V. A. Moore of the New York State Veterinary College at Cornell University is authority for the statement that from 5 to 20 per cent of the tubercular animals can not be detected by a single application of the tuberculin test. The present day veterinarian seeks to overcome this limitation of the specific tests as well as may be by using two or even three of the tests at the same time or by repeated use of the same test. Under the best of circumstances some tubercular animals will escape detection. Their presence in the herd is a menace to its future health. By consistent and repeated tests a herd can be protected against the disease in the great majority of instances. Now and then a failure appears, a failure so striking as to destroy the confidence of some in the value of the test.

It will be seen that what has been said refers to the non-detection of the disease. Sometimes the test points the finger of suspicion to what is found on slaughter to be an apparently non-tubercular animal. Two explanations are possible, and both seem probable. First, the tubercular animal may be extremely sensitive, a most minute development of the disease may cause a reaction, and the amount of diseased tissue may escape even the most careful examination. Again, some other condition than the tubercle bacillus may produce a sensitiveness to tuberculln.

It does not matter which of these conditions is most frequently the cause of the removal from a herd, of animals that do not show lesions on slaughter. Such instances occur and will continue to occur. If the breeder is to use the tuberculin test, he must use it with such limitations as it may have. Without its use tuberculosis will spread unchecked. With the tuberculin test we hope to limit its spread, to reduce the amount of the

disease, and to keep it out of areas that are practically free from it, as are some of the northern counties of Wisconsin.

Admitting that the statements made are correct, will it not be conducive to peace of mind for the breeder who is using the tuberculin test to adopt the policy that the test is more nearly a correct agent for the determination of the presence of tuberculosis than is the post-mortem examination? If some of his valuable animals react, and their isolation from the remainder of the herd is impossible, he should consign them to the slaughter house with the idea that what he has done is best for the herd, and ninety-nine times out of a hundred it will be. If he follows the animals to the killing floor, and no evidences of disease are found, he questions the tuberculin test, and may abandon it, with the chances of having made a mistake ninety-nine times out of a hundred. If I were a breeder I would use the tuberculin test. I would part with the reacting animal, ask no questions as to what was found, and I should be certain that what I had done would be the safest road to success as far as the health of the herd is concerned.

Washington Holstein Affairs

HOARD'S DAIRYMAN:—With the selection of Stanley V. Butchart as secretary, the organization of the Washington Holstein-Friesian Breeders' Association is completed. Mr. Butchart was one of the organizers of the Yakima County Holstein-Friesian Breeding Association and for a number of years has been a leader in the improvement of live stock in the Yakima Valley.

The rapid growth of the state organization is largely attributable to the untiring efforts of F. S. Stimson of Hollywood Farm. The initial step in the development of the state association was taken at the Washington State Fair last fall when fifty Holstein breeders in attendance effected an organization, electing Mr. Stimson president and R. L. Rutter as temporary secretary. This meeting was adjourned to assemble again at The Pacific International Live Stock Show. At that meeting President Stimson presented a constitution and set of by-laws which were adopted. In discussing conditions prevailing throughout the Northwest it was stated that the demand for high-grade Holsteins is increasing and breeders are finding it more difficult to supply a sufficient number of animals for the buyers.

"Eastern breeders are beginning to look to the Northwest for good stock. One of the greatest opportunities of the state of Washington has is in the development of the pure-bred cattle industry. We have every advantage in climate and other essential conditions. The official records show that we have the foundation stock. No other industry in the state has greater possibilities", says C. A. Harrison, a Seattle breeder of pure-breds. Mr. Harrison took Countess Sunnyside DeKol 2nd, grand champion of the 1919 Pacific International Live Stock Exposition, to the National Holstein Sale at St. Paul last June where she was sold to a Pennsylvania breeder for $5,000, her calf bringing $2,800.

With the record of 37,380 pounds of milk containing 1,158.95 pounds of fat, exceeding the former world's record by 3,958 pounds of milk, Segis Pietertje Prospect owned by the Carnation Stock Farm added new laurels to Washington's Holstein record.

The Holstein breeders of Washington take pride in the fact that they are developing a highly efficient type of dairy animal as is evidenced by the fact that many breeders in other sections of the country are looking to the Northwest for their foundation stock. President Aitken in addressing the breeders of Snohomish County said: "The chief trouble with the dairy business in Washington and elsewhere is that three-fourths of the milk producing machines on the dairy farms are antiquated and inefficient and many of them are operated by inefficient men."

He referred to the dairy cow as a milk manufacturing machine and said the farmers would be the first to laugh at any other manufacturer whose equipment and methods were as inefficient as that on many dairy farms. "The consumers of dairy and other farm products have a right to expect that the farmers will use efficiency in their business and not require the consumer to pay for the lack of it," he said.

It is believed by those responsible for the organization of the association that it will accomplish much toward the elimination of the inefficient and scrub dairy cow and that the dairy industry of the state of Washington will be placed on a higher standard.

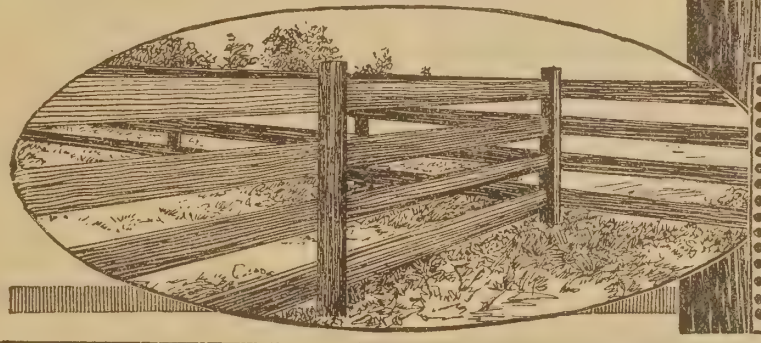
Washington. ALTON D. HURLEY.

The hot school lunch isn't a fad; it is a practical, common sense way of making it easier for boys and girls to learn, and at the same time to build up stronger bodies.

"The Fence Everlasting"

Fences built of Long-Bell Creosoted Yellow Pine Posts and Fencing Boards give permanent, dependable protection to livestock and crops. Decay-proof creosoted Yellow Pine fence boards are most practical for barn yard, corral and feed lot fences. They attract favorable attention—give your place that "well-kept" appearance by which the value of any farm is largely judged.

LONG-BELL
Creosoted Yellow Pine Fence Posts



are straight, smooth, uniform and outlast ordinary posts many years because they are injected with Creosote (Dead Oil of Coal Tar) by the pressure-vacuum process. The sapwood is thoroughly saturated, making posts capable of resisting decay, fire and other destructive elements—practically "everlasting."

Posts shown here are Sawed Halves. Other styles are Full Round and Sawed Quarters; all suitable lengths and diameters.

5 Great Novelties 20 cts.

AUTUMN GLORY. A new hardy plant. The most showy Autumn bloomer, surpassing all others. It is the latest to bloom, showing its full glory after frost has killed all tender flowers. Greatest novelty in twenty years. Succeeds everywhere, reaching perfection the first season from seed, and continues blooming for years. 20 cts. per pkt.
With each order we send one trial packet each of: PINK WOOLFLOWERS, new—nothing can surpass the mass of pink flowers which it shows all season.
DAHLIA LORD GOFF, lilac pink, in great profusion. Blooms in 3 to 4 months.
JAPAN IRIS, new hybrids of all colors. Magnificent.
DIENER TOMATO, grows to weigh 3 lbs. As smooth and beautiful as an apple. Most startling new vegetable.
And our Big Catalog, all for 20 cts.
Big Catalog, free. All flower and vegetable seeds, bulbs, plants and new berries. We grow the finest Gladioli, Dahlias, Cannas, Irises, Peonies, Perennials, Shrubs, Vines, etc. All prize strains—many sterling novelties.
JOHN LEWIS CHILDS, Inc. Floral Park, N.Y

Yield of Each Cow Figured for You

By the *CP* Pail Balancing Scale

Has two indicators. Weighs the milk in the pail. Eliminates errors. First hang the empty pail on the scale. Turn the thumbscrew in the center of the dial, which moves the red indicator until it is at the 0 mark, thus balancing the weight of the pail. Then add the milk or cream and the result shown by the red indicator gives the net weight of the milk or cream, and at the same time the black indicator gives the gross weight of pail and milk.

The capacity of these scales is 30, 60 and 120 pounds, according to size, in pounds and tenths of pounds. With each scale we furnish special blanks that will contain the record for two milkings a day for one week for 14 cows.

The scale can also be used for all weighing purposes.

Price each, 30 lbs. capacity by 1-20 lb. $4.85, 60-lb. $6.65, 120-lb. $8.85. Extra records per dozen, 15c.

Price each Postpaid (East of the Rockies)

Holstein Breeders of New Jersey Meet

During the week, January 10-15, the Holstein breeders of New Jersey held a very enthusiastic demonstration for the breed at Trenton. Twelve Holstein cows were on exhibit to teach the value of record keeping. Other Holsteins were shown to illustrate the proper type of Holstein breeding animals. Two calves were compared, one of which had received plenty of milk and the other being stunted because milk had not been fed. Truman Davis, a member of a boys' calf club, had on exhibit a pair of twin heifers a year old.

On January 13th Holstein breeders met in annual session. G. D. Brill was elected president for the coming year; N. Y. Dungan, vice-president; W. M. Regan, secretary; and Thos. Metler, treasurer. Committees on advertising, program, legislation, and membership were appointed. It was decided to hold a sale June 9th. In the afternoon session B. D. Scott, secretary of the Minnesota Holstein Breeders' Association, gave a talk which was received with much enjoyment. At the evening banquet it was stated by Mr. Dungan that of the 150,000 dairy cows in New Jersey, 120,000 are black and white.

Merrill Secretary Oregon Dairy Council

HOARD'S DAIRYMAN:—Fred W. Merrill has been elected secretary of the Oregon Dairy Council. Mr. Merrill formerly edited a dairy magazine and has had wide experience in organization as well as in work that pertains to the dairy industry. He succeeds Edith Knight Hill who has been with the Oregon Dairy Council since its founding.

The council will put a strong effort into organizing along firm financial lines and will extend the work already started and establish new interests. It is the aim of the new president, J. E. Dunne, and Mr. Merrill to establish a Northwest council among the Northwestern-Pacific states that these may co-operate in the work done for the dairy industry.

The Oregon Dairy Council so far has done most of its work through the schools, clubs, mothers' and parent-teacher meetings, and by means of milk surveys, talks before community and farmers' gatherings, and through the press. Exhibits in the libraries, schools, and at fairs have played an important part. The Council now has an exhibit in the state house at Salem where the legislature is meeting. The secretary spoke before farm bureau meetings and has addressed several school assemblies in January.

⚜

The Oregon Dairymen's League is doing good work now and is meeting with success. At a recent meeting in Hillsboro the members voted in favor of subscribing $100,000 worth of preferred stock to erect plants (cheese) in Washington County to insure a market for milk in that locality. The shutting down of the condenseries in that locality had caused this problem to arise.

⚜

D. D. Aitken, president of the Holstein-Friesian Association of America, who is visiting the Pacific Coast was entertained in Portland at a banquet given on January 28 under the auspices of the Pacific-International Live Stock Exposition, the Oregon Dairy Council, and the Oregon Holstein Breeders' Association. A banquet at the Hotel Portland was a fea-

ture. Other shining lights present were Henry McCall, president of the Oregon Holstein breeders; O. M. Plummer, manager of the Pacific-International; and Fred Stimson of Hollywood, president of the Pacific-International; J. E. Dunne; Fred Merrill; a score of bankers, and as many breeders; and a large delegation of dairymen.

A junior Guernsey Cattle Club has been organized in Clackamas County, Oregon. The Clackamas County Guernsey Cattle Club last year had among its members several boys and girls. Four of these young people were among those who imported heifers from the Island of Guernsey. Three members of the junior club exhibited at the state fair last fall. Francis Hughes, son of Mr. and Mrs. I. A. Hughes, placed first with his heifer. Francis won a trip and scholarship to Oregon Agricultural College for next summer.

Oregon. E. K. HILL.

Steps in Land Clearing

Here is a boiled down discussion of land clearing methods:

Cut the trees down and get them out of the way.

Cut brush with a brush scythe or other suitable tool and pile it up as cut.

Collect dead and down timber and pile it for burning.

Utilize all trees and down timber for fuel, it's worth while.

Blast stumps as preparation for stump puller.

Haul pulled stumps to pile and pile them with Conrath home made piler for burning.

Stump removing is the most important job. It is preceded by blasting with 20 per cent dynamite, using either fuse or electric blasting machine. The dynamite splits the stumps and makes them easy to remove with a team or horse power puller, of which there are several makes and styles.

Stumps once out of the ground should be arranged in high, narrow piles and burned as soon as they are dry.

2,464 Guernseys Average $508

Five hundred and eight dollars was the average price paid for 2,464 Guernseys in forty-nine sales reported in the Guernsey Breeders' Journal from January 1, 1920, to December 15, 1920, inclusive. Two thousand and eighty-eight females brought $1,107,489.70, an average of $530.41. Three hundred and seventy-one bulls brought $144,551.46, an average of $389.63. Six Guernseys whose sexes were not stated brought $365, an average of $60.83. The total sales amounted to $1,252,406.16.

The average for 1920 is indeed encouraging. Some sales have brought low averages and have tended to cast a gloomy aspect upon the entire pure-bred dairy cattle situation, but when all the facts are brought out we find that the past year has been very flourishing for Guernsey breeders. The average for 1919, which was $546, was not quite reached, but the total number of cattle sold in the last year exceeded the number sold in 1919 by more than 88 per cent.

A detailed statement of averages for the last three years is given in the following table. The cents in each case have been omitted.

Year	Sales	Females No.	Females Ave.	Bulls No.	Bulls Ave.	Total No.	Total Ave.
1918	38	737	$385	167	$284	1318	$330
1919	29	1096	561	213	470	1309	546
1920	49	2088	530	371	390	2464	508

"BALL BAND" TRADE Red Ball MARK

Look for the Red Ball

TRAMP through a bog—wade all day in running water—stand ankle-deep in mire—if your boots are "Ball-Band," your feet are dry at night.

The rubber and fabric of "Ball-Band" Boots are welded by a vacuum process into one solid, tough piece, giving extra long wear.

"Ball-Band" Arctics keep your feet and ankles warm as toast, in deep snow or bitter cold. Good fit and latest style are combined in "Ball-Band" Light-Weight Rubbers. To make sure of what you're getting, look for the Red Ball Trade Mark when you buy.

Free illustrated booklet, "More Days Wear," shows you our great variety of Rubber and Woolen Footwear. Ask your dealer for it.

EDITORIAL COMMENT

It is refreshing to be advised of the action of the milk producers in the vicinity of Orfordville, Wis. A successfully operated creamery has been located in this place for many years. During the war the demands for condensed milk grew, so a condensery was established which took away almost all the creamery's patrons. Some of the far-sighted patrons appreciated that there would be a reaction in the condensed milk business and when the owner of the creamery desired to discontinue its operation, they bought it. When the crash came to the condensed milk industry, these far-sighted patrons opened the creamery. They have had a good market for their product and have received an unusually good price for butter and have had the skimmilk for feeding their live stock. The price these patrons received has been quite as good as has been paid for market milk and they have been in a position to care for their own product and to direct its marketing.

These men exhibited a business foresight and showed an understanding of marketing conditions which is highly commendable. We wish every dairying community had men with such foresight and business understanding. It would mean a regeneration of the present system of preparing and marketing dairy products.

PROTECT THE BUYER

A commendable action is that taken by the managers of Wisconsin dairy cattle sales. In an effort to standardize public auction practices and further insure fair treatment for the buyer, six regulations have been agreed upon for adoption. Sales operating under these rules will be designated by the "seal of approval" of the state federation of sales managers. Consignors violating any of the rules will be barred from selling in "approved" sales and their names made known to the federation members.

Observance of provisions guaranteeing honest dealings with purchasers in the public auction can have but one effect—that of increasing public confidence in that institution. The sooner all sales get away from the rule, *caveat emptor*—let the buyer beware, and recognize the justice of protecting their customers, the greater is the benefit to the pure-bred industry.

COST OF MILK

Ever since dairying has taken on the form of an industry, an attempt has been made to estimate the cost of producing milk or, perhaps better say, to determine the profit made by keeping cows. More than forty years ago the leading dairy farmers of Wisconsin, those engaged in close studying of what dairying would do and what returns it would make, came forth with a formula—if it may be called such—which would indicate the profit made by keeping cows. These men came to the conclusion that if a cow returned $25.00 a year above the cost of feed, she yielded a profit of that much to her owner. They appreciated that other factors entered into the cost of producing milk, such as interest on investments, depreciation, labor, etc.; and, on the other hand, they recognized that the cow brought other returns than simply from her milk or fat; that is, the calf, the utilization of farm products that have no market without her, the employment of labor, especially of the family, and her manure. After balancing these factors they concluded that any return above the cost of feed was profit. These men had observed bran being run into the mill race or burned as fuel and cornstalks, which contained 40 per cent of the nutrients in corn, wasted in the field; they knew the advantages of feeding skimmilk to the live stock on the farm; what the manure would do for the land; the opportunity for following a system of diversified farming with rotation of crops.

As we review the reports from various sources on the cost of producing milk, we come to the general conclusion that these men were not far wrong, especially where the farmers are following diversification. Anyone who has considered the cow and all her relations to agriculture knows how difficult it is to arrive at the returns she makes. This one thing is sure—farmers who have kept good dairy cows and followed diversified farming have made money, and are now better off than any other class of farmers.

ARMSBY VS. SAVAGE FEEDING STANDARDS

In the balancing of rations there is considerable difference in the requirements for dairy cows as stated in the various published feeding standards. At the University of Wisconsin a test has been made with dairy cows to discover the difference in results from the Savage and Armsby standards, two which are now widely used.

In balancing rations according to the standard of Savage, cows producing fairly heavily are shown to require considerable more concentrates than is specified according to the Armsby standard. A trial has been carried on to show the effect of this difference in total digestible nutrients or net energy. Two lots of eight cows each were used in the experiment which covered three periods of five weeks each. The average of results with the Armsby ration shows that the cows consumed 7.21 lbs. of concentrates, 10.8 lbs. of alfalfa, and 31.6 lbs. of corn silage per head daily. When fed the Savage ration they consumed 10.33 lbs. of concentrates, 10.8 lbs. of alfalfa, and 32.3 lbs. of corn silage; that is, the Savage standard furnished three pounds more concentrates per day. The average daily milk yield on the Savage ration was 27.94 lbs. On the Armsby ration it was 25.72, a difference of 2.22 lbs. Also on the former ration the daily yield of butterfat was 1.04 lbs. and on the latter .97 lb., a difference in favor of the Savage standard of .07 lb. On the Savage ration cows gained slightly more in live weight than with the Armsby feed.

The results show very clearly that with most of the animals in this test the Armsby ration did not supply sufficient nutrients to permit maximum production. It is pointed out that while the total production of a cow is of first importance to the breeder who is feeding cows for maximum records, economy of production is of greater importance to the average dairy farmer. With feeds calculated at 1917 and 1918 prices it was found that the feed cost of 100 lbs. of milk was $1.78 on the Savage standard and was only $1.60 on the Armsby ration. The feed cost of one pound of butterfat with the former ration was $.48 and with the Armsby ration only $.42. The results indicate that rations balanced according to Savage standards cause greater production than those according to Armsby requirements. However, when feeds are high it is more profitable to feed somewhat less concentrates, as advised by the Armsby standard, in order that maximum economy of production may be secured.

CAN YOU INFORM US

Since the inception of Hoard's Dairyman we have attempted to show the feeding value of skimmilk. It has been shown by experiment that 100 pounds of skimmilk is equivalent to one-half bushel of corn or six times the value of a pound of live pork. In other words, when corn sells for 60 cents per bushel, skimmilk is worth 30 cents per 100 pounds, and when hogs sell for $9 per 100 pounds, skimmilk is worth 54 cents. For the feeding of grade calves selling at the age of six months for $25 apiece, skimmilk is worth 50 to 60 cents per 100 pounds. For chickens it is estimated to be worth all the way from $1.50 to $2 per 100 pounds.

We were recently informed of a group of farmers, taking their milk to a creamery, who refused to carry the skimmilk back home as they considered it of no feeding value. If they refused to feed their live stock skimmilk from a creamery which had not been properly pasteurized, fearing tuberculosis might be carried to their herds and flocks, it would be a very reasonable excuse. But to refuse skimmilk because, in their minds, it has no feeding value is to us a lamentable state of affairs. It has been shown by experiments that one pound of corn and three pounds of skimmilk make an ideal ration for the production of pork. It not only produces a high quality of pork but hogs make their most economical gains on this combination of feeds.

Utilizing skimmilk for the rearing of hogs and calves and for egg production brings about a diversification in farm operation that is highly desirable and according to our government reports the farmers producing animals and animal products have suffered less financial reverses or liquidation than those producing crops. If it can be impressed upon the farmer that this diversification is advantageous to his profit and if he could be taught the value of these by-products for the rearing of his live stock, the milk question to a very large extent would be solved.

Can anyone inform us what we can do to get the milk producers to comprehend the advantages of this course?

FARMERS STABILIZING FORCE

Dr. Bailey, in an address before the American Association for Agricultural Legislation, says, regarding debates and discussions: "They breed the spirit of self help. Unfortunately the philosophy of grievance, discontent, and complaint is abroad amongst us, and it propagates itself and grows big by habitual discussion. It breeds the spirit of dependence and sows the seeds of strife. These numerous people, standing on the earth, owned by nobody, impossible to stampede, each man responsible for his program, cautious of novelty, moving separately rather than in crowds, temperate in hero-worship, will absorb the shock in the conflicts of the classes. They should be a stabilizing influence. It is just because the farmer stands between and behind the classes that he may render inestimable service to society by helping to umpire the disputes."

Some farmers feel ill over the agricultural situation of having their industry liquidated with such a vengeance and before others had a taste of it. These men feel a great deal worse than they should or than conditions warrant. The great body of farmers are acting wisely and resolutely in our present situation and most of them say that this condition had to come and the sooner it did the better it would be, not only for agriculture but for the nation. It is their desire to see it go on until conditions are brought back to normal. They have not been affected by talk or discussions, or have they stampeded. They have absorbed the shock. They are the stabilizing influence, for they appreciate that agriculture will survive. A few farms will suffer because they have expanded too much. Outside of a small percentage of dairy farmers, the dairy industry has suffered less than any other branch of agriculture. The patrons of creameries and cheese factories are in position to make more money by feeding cows this winter than last, for the prices of feed are relatively cheaper than the price of butterfat. Among the well organized co-operative creameries that have secured a good market for their high quality butter there is little complaint, for the patrons are self reliant, resolutely going forward with their work, and they are not permitting themselves or their industry to become depressed.

Margin on Milk Store

In furnishing bottled milk to stores where milk is retailed at 15 cents per quart, what price should the grocer pay for the milk?

Gypsum, Colo. O. W. R.

The margin allowed stores for handling milk depends upon the arrangement made for taking

back surplus, making up bottle losses, etc. The average allowance for grocery stores for carrying bottled milk ranges from one to two cents per quart, about half taking a margin of one cent and about half taking a margin of one to two cents. The margin taken by stores selling dipped milk averages one-half to one cent per quart.

It is estimated that the cost per bottle for icing during summer months ranges from .087 to .417 of a cent per quart, the average being about one quarter of a cent. To this ice cost must be added labor costs, risks, and overhead.

Sweet Curdling of Milk

What causes milk to clabber and get thick with sort of a whey coming to the top? There is not the least bit of acidity to it as it has a rather sickish, sweet taste. The cream sours all right. The cow seems to be perfectly healthy and this condition does not occur except occasionally. I am feeding a balanced ration of grain, together with mangels and mixed clover hay.

Cuba, N. Y. G. B. D.

The fermentation which normally occurs in milk is one in which acid is formed from the sugar. The taste of the milk gradually changes from sweet to acid, or sour, and the milk curdles under the action of the acid produced by the acid-forming bacteria which in one way or another find their way into nearly all milk. Many other kinds of bacteria are also introduced into milk. As a rule, the non-acid formers do not find as favorable conditions for growth in milk as do the acid forming bacteria. They are, therefore, unable to compete with the acid-producers and usually their presence is not noticeable in the milk. If the acid-forming bacteria are not introduced into the milk, a condition that is possible when the milk utensils are very thoroughly cleaned and sterilized and when the milk is produced under clean conditions in other respects, the non-acid-forming bacteria make themselves manifest and produce what may be called an abnormal fermentation in the milk.

Many of the non-acid-forming bacteria produce a substance very similar to the rennet used in curding milk in cheese making. The milk in which such bacteria have grown may curdle and still show no acid taste or odor. This change is frequently called the "sweet curdling" of milk.

If the bacteria forming the rennet-like substance are introduced into the milk in large numbers as compared to the acid-forming bacteria, they may grow to such an extent as to cause the sweet curdling of the milk. Later the acid-forming bacteria may grow, changing the taste of the milk from sweet to sour. It is probable that such is the case in the present instance, for your correspondent states that the cream removed from the abnormal milk sours in a normal manner.

There need be no hesitation in using the milk from the animal even though it does not undergo what is considered the normal fermentation of milk. The feed can have nothing to do with this abnormal fermentation.

If the trouble appears frequently, I think it can be prevented and a normal souring of the milk produced by securing a little sour milk that has the clean acid odor associated with the most desirable acid-forming bacteria and inoculating the utensils with it. One should then be careful not to subject the utensils to boiling hot water in the rinsing process which ordinarily follows washing proper.

The writer is well aware that in giving such advice he is going contrary to the prevalent ideas in regard to milk production and the care of milk utensils. He is very certain, however, that milk can be produced which will be of no value for the making of butter because no acid-forming bacteria are introduced, on account of the extreme cleanliness surrounding production. If such milk is to be used for the making of butter, the acid-forming bacteria must be introduced in some way. The way suggested is but one of many that might be mentioned. E. G. HASTINGS.

Wisconsin College of Agriculture.

Tuberculin Testing Questions

Will you please answer the following questions about tuberculin testing through your paper:

1. When cattle are killed that are reactors to the tuberculin test do they find many that have no lesions or don't show any signs of T. B.?
2. Could the tuberculin in any way affect the cattle so they would react if they did not have tuberculosis?
3. Can an animal that has reacted to the test be tested again? If so, how soon?
4. Can cattle under six months be tested successfully by any of the three methods?
5. Which of the three methods do you consider the most reliable, the subcutaneous, the intradermal, or the ophthalmic?
6. Do you consider using two of the methods together more sure than one?

Whallonsburg, N. Y. W. W. F.

1. Post mortem examination of reacting cattle will not ordinarily disclose lesions in more than 85 to 90 per cent of the cows. This does not mean that the animal does not have tuberculosis, but merely that no observable lesion can be found. It is quite possible that the animal may be in the incipient stages of the disease or it is quite possible that the lesion is so covered up or so small that it is not ordinarily found with the examinations as they are made on the killing floors.

2. The tuberculin will in no way affect cattle so they will react when free of the disease. There are people who fear tuberculin may communicate the disease to their cattle. That this is not possible is not only proven by many demonstrations, but also by the fact that the tuberculin itself consists of the dead disease germs and, therefore, will not communicate the infection.

3. Most veterinarians consider that when a cow has once been determined to be a reactor, she should be ever after treated as a reactor. The saying is, "Once a reactor, always a reactor". In some states the law requires that an animal once condemned can never afterward be declared free of the disease. We have known of cases, however, where an animal may have shown only slight symptoms of the disease and has later been tested and failed to react. The trouble with maintaining such a cow in the herd is that the tuberculin test will not always disclose all the reactors and it sometimes happens that the condition of the animal is such that she will fail to react even though showing evidences of the disease. The safest thing for the owner of a herd is to dispose of all animals that react and not to hold them for retest.

4. As a general rule, it is inadvisable to test an animal under six months of age, although we have in our own herd used the intradermal test in such a case and were satisfied with it. We would expect, however, to retest such animals when they arrive at greater maturity, in order to be quite certain that the test had not failed to disclose incipient cases of the disease or cases which have been contracted after the test was applied.

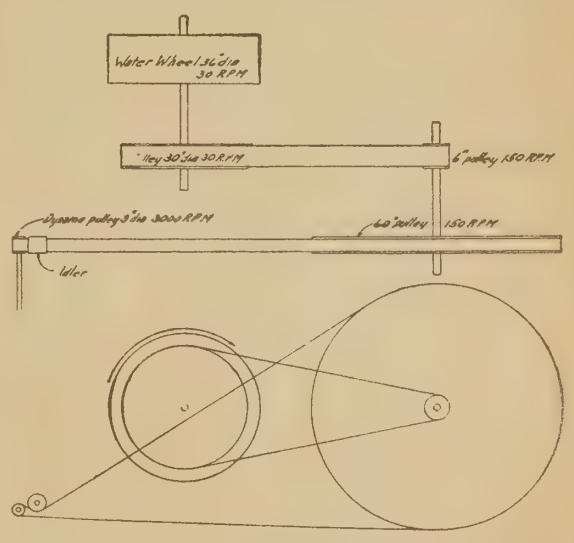
5. The subcutaneous is considered at present the most reliable and is the standard test. The intradermal is, however, coming into larger use and there are many who believe it is quite as accurate as the subcutaneous, if not more so. The ophthalmic is the least satisfactory of the three tests.

6. We are quite in favor of the use of all three tests in determining whether or not the disease is present in the herd. This is due to the fact that repeated examinations have shown an animal will react to one of these tests and possibly fail to react to the other two. Or it may react to two of the tests and fail to react to the other.

As a matter of fact, the tuberculin test is accurate in ascertaining the presence of tuberculosis in the herd in perhaps not to exceed 90 to 95 per cent of the cases where it is used. If there were a better agent for determining the presence of the disease, we should be very happy, but at the present time tuberculin is the best agent that we have in controlling the spread of the disease.

Designing a Water Wheel

We wish to run a 1-6 H. P. dynamo from a stream of water which is dammed up to a height of approximately three feet. Kindly tell us how to make a water wheel and what size pulleys to use to make the dynamo turn over 3,000 R. P. M., which is the maximum speed of the generator. The water of the brook will fill a 2-inch pipe continuously.



Saukville, Wis. SUBSCRIBER.

The statement that the water of the brook will fill a 2-inch pipe continuously is rather vague. In order to figure the available power it is necessary to know the quantity of water flowing per minute, or other unit of time, and the distance it falls. In your subscriber's case, I would suggest that he place a barrel, or other receptacle, under the 2-inch pipe and see how long it takes to fill it. The standard barrel holds 31½ gallons but most of the barrels used for holding liquids are larger. If a barrel holds 42 gallons and is filled in 7 seconds, the flow will amount to 6 gallons per second. A gallon of water weighs about 8⅓ pounds and the total falling weight will be 6x8⅓ pounds or 50 lbs. per second. If the 50 lbs. of water falls 3 feet, the work done will be 50x3, or 150 ft. lbs. per second. Since a horse power is equivalent to 550 ft. lbs. per second, the available power will be 150 divided by 550 or about one-fourth horse power.

The type of wheel or turbine used will have a good deal to do with the amount of power delivered. The overshot wheel is probably the most efficient, sometimes delivering as much as 90% of the power received from the falling water. The other types of wheels and turbines are somewhat less efficient. If the wheel or turbine is connected to an electric generator by means of gears or belts, or both, it is very doubtful if more than half the available power can be delivered to the dynamo. Thus, in the above problem one-eighth horse power would be all that could be reasonably expected.

In order to successfully drive a one-sixth horse power dynamo from a 3-foot fall, there should be at least 6 gallons of water flowing per second and I judge that this is about twice as much as your subscriber has.

To design a water wheel which will be cheap and efficient is a job which requires considerable knowlege and experience. If there is a large amount of water available and wastage is not an important factor, a home-made plank wheel may do very nicely. All things considered, the home-made wheel will probably cost as much as a boughten one and will not be anywhere near as efficient. A light steel wheel, such as would fill the bill in this particular case, would probably cost about $50. So far as I know, there are no bulletins or other printed matter outside of text books

PULLEYS FOR TRANSMITTING POWER FROM WATER WHEEL

which would aid an amateur in building a water wheel. There are, however, several concerns which make the building of water wheels their specialty, among them are: The Fitz Water Wheel Company, Hanover, Penn.; The Rodney M. Hunt Company, Orange, Mass.; The Pelton Water Wheel Company, New York City; and the James Leffel Water Wheel Company, Springfield, Ohio.

To determine the size of pulleys necessary to drive the dynamo at a certain speed, three things are necessary: speed of dynamo, speed of water wheel, and diameter of dynamo pulley. For instance, assume that dynamo must run at 3,000 revolutions per minute, water wheel at 30 revolutions per minute, and that dynamo pulley is 3 inches in diameter.

The revolutions per minute of dynamo times diameter of dynamo pulley equals revolutions per minute water wheel by its diameter.

The diameter of drive pulley in the case cited would be 3,000 times 3 divided by 30, or 300 in.

Since a pulley of this size is impractical, a counter shaft must be employed. In the first place, the pulley on the water wheel shaft will probably have to be smaller than the water wheel, in this case less than 36 inches, suppose we say 30 inches. The small pulley on the counter shaft should be large enough to permit its use without an idler, say 6 inches. The distance between the two shafts should not be less than twice the diameter of the larger pulley, or in this case 5 feet. The counter shaft will now run at 30x30 divided by 6, or 150 revolutions per minute. To determine the size of drive pulley on the counter shaft, use the same formula as before: revolutions per minute of dynamo times diameter of its pulley equals revolutions per minute counter shaft by diameter of drive pulley, (3,000x3 divided by 150, or 60 in.).

In order to save room and belt an idler should be used near the dynamo pulley. The accompanying sketch will probably speak for itself.

Minnesota. A. G. TYLER.

Willis J. Eldridge

HOARD'S DAIRYMAN:—The death of Willis J. Eldridge of Ohio, January 27, was a distinct loss to the dairy industry of Northeastern Ohio and to the great commercial dairy business reaching far east and west. Mr. Eldridge was for years the largest buyer of milk and manufacturer of cheese in the Central West, and besides did a large brokerage business in dairy produce. He was a large land proprietor, owning several farms all devoted to dairying. In the late 60's as a farm boy he had a vision of the great changes that would surely come in dairying and, with his father's consent and promise he would supply him with the milk of his dairy as a starter, he built a small factory and commenced a patron factory. So satisfactory was it that it rapidly grew into importance and was added to and built upon until it was soon a 1,000-cow concern. Ultimately Mr. Eldridge had over twenty-five factories scattered about in Portage, Geauga, and Summitt Counties. Then came the day of buying milk outright, a plan he introduced into all of his factories and maintained to the last. He introduced trade brands of cheese and guaranteed each to be of uniform quality. They became trade-marks known everywhere.

Then he added brokerage, buying and selling of the makes of other states and localities until he was handling cheese by the half million pounds or more yearly.

Honest to the letter, of strict integrity, a business difficulty with anyone was unheard of with Mr. Eldridge. Wonderfully enterprising and liberal to an extreme degree both in a public and a church way, he soon had a host of friends that never left him.

On the 27th of January word was quickly passed that Will Eldridge had quite suddenly passed away, in his 78th year, a commanding figure in his sphere of life and action, a great pioneer in the development of Ohio's dairying, and sincerely mourned by all who knew him.

Ohio. JOHN GOULD.

Hawley Commissioner of Oregon

C. L. Hawley, for many years a successful farmer in the Willamette Valley, took over the office of State Dairy and Food Commissioner for Oregon January 1. Commissioner Hawley is a practical dairyman, having been for several years one of the most progressive and successful farmers in the state. He owns a herd of pure-bred Guernsey cattle and has been for eight years president of the Oregon Pure-bred Live Stock Association. He served for several years as a member of the Board of Regents of the Oregon Agricultural College and for four years has been treasurer of the institution. He has served three terms in the state legislature.

Oregon F. L. BALLARD.

Butter Prices Slightly Firmer During Past Week

[Report by U. S. Bureau of Markets.]

Trading in the butter markets was revived to some extent and a firmer tone was noted in the early part of the week ending January 29. At the New York market, which led in the move, this was attributed to a reaction from the previous week when price declines were registered, and to the fact that holders of Danish butter refused to sell their offerings at a loss. This action on the part of importers caused buyers to turn to domestic butter when prices reached a favorable point, with the result that the markets were fairly well cleared. The clearance of the undergrade Argentine butter the previous week to Canadian buyers, and a reputed Canadian interest in further undergrade purchases also strengthened the situation, especially on medium grades.

Interest in Foreign Butter

The S. S. Mongolia arrived during the week but carried only a small cargo of Danish butter, mostly in boxes. Several other cargoes are reported either on the way or just about to sail from foreign quarters. Danish has been selling in a wholesale way at 49c to 50½c. New Zealand butter is still offered at New York at prices around 47c to 48c. These offerings are a factor hanging over the market, and with recent arrivals reaching a large volume little else than a weak, unsettled market could be expected. Considerable interest is at present centered on the progress of proposed legislation increasing the present 2½c duty on imported butter.

The average wholesale prices on 92-score butter at five of the principal markets for the week ending Jan. 29, 1921, and corresponding week last year, were as follows:

	Week ending Jan. 29 1921	1920
	cents	cents
New York	49.8	63.1
Chicago	45.7	61.4
Philadelphia	49.7	63.4
Boston	50.0	63.7
San Francisco	41.4	64.0

The receipts of butter at these markets were 7,364,386 lbs. as compared with 4,138,139 lbs. for the corresponding week a year ago and 7,078,800 lbs. last week.

Feed Markets Undergo Further Rapid Price Declines

[Report by U. S. Bureau of Markets.]

The feed market during the week ending January 29 was in a demoralized state. An almost daily decline in the price of hominy feed together with a further cut of $5 per ton in the price of gluten feed, making a reduction of $8 to $10 within the last two weeks, caused prices of all other feedstuffs to drop to new low levels.

Retail dealers are not having normal demand for this season of the year and, because of exceptionally light feeding, large reductions in the number of cattle in many sections, and the expectation of early southern pastures, an immediate improvement in the demand is not anticipated. Reports from every section of the country indicate that with few exceptions stocks in hands of dealers are larger than normal. Therefore, further declines are looked for unless colder weather soon stimulates the feeding demand.

Wheat Mill Feeds.—Bran declined as much as $2.50 per ton in a few of the markets and is generally quoted $1.50 to $2 lower than last week. Middlings followed the decine very closely.

Cottonseed Meal.—Due to the small eastern demand and slightly increased stocks in many sections the cottonseed meal market was dull. The last survey of the cottonseed products situation made by the Bureau of the Census for the five months ending December 31, 1920, indicates that although production of cake and meal was lighter than for the same period in 1919 stocks of these commodities at mills were 8,300 tons larger on December 31, 1920, than on December 31, 1919. Exports were about 47,000 tons less for the five months ending December 31, 1920, than they were during the same period 1919.

Linseed Meal and Cake.—Linseed meal prices held steadier than those quoted for other feedstuffs. While stocks in the northeast are heavy, prices f. o. b. Buffalo are about $2.50 higher than those quoted by Minneapolis mills. Mills report the movement as fair. In Chicago jobbers were offering the better grade of meal at $40, though mills were asking $42 f. o. b. that market. A heavy export demand is not anticipated but mills expect the domestic consumption to improve.

Gluten Feed.—The price of gluten was reduced by principal manufacturers $5 per ton during the past week. A larger number of mills are reported to be in operation but it is said that most of the smaller mills do not expect to continue operations for a long period, having started only with a view of taking care of business that was secured during the time they were closed down.

Hominy Feed.—Offerings of hominy feed continue liberal while the demand, notwithstanding price reductions, was only moderate. Prices declined with lower grain values. Distress sales of white hominy feed were made at $22 in the Chicago market.

Beet Pulp.—Cincinnati reports the sale of beet pulp at $36 though quotation of $37 is a more representative price. Little interest was manifested in this commodity. Dutch dried beet pulp was offered around $38 spot f. o. b. New York.

Alfalfa Meal.—The decided break in alfalfa hay prices in a few markets, particularly Cincinnati, caused lower offerings of alfalfa meal. The demand for sweet feeds has not improved to any considerable extent and mixed feed manufacturers are

RALEIGH'S EMINENT BUTTERCUP, JERSEY COW OWNED BY LONGVIEW FARM, MISSOURI

She has produced 85.9 lbs. milk in one day, 581 lbs. in 7 days, 2,104.7 lbs. in 30 days, and 4,316.5 lbs. in 60 days.

buying sparingly. Production and stocks are light. No. 2 meal is offered at $3 to $3.50 less than No. 1 meal in several markets.

Other Feeds.—Ground barley and oat feed were easier with little demand. White corn bran was offered at around $24 St. Louis, $35 delivered northeastern markets. For imported Irish dried brewers grains $37 f. o. b. cars New York was asked, and flour middlings were quoted from $1 to $3 over the price of standard middlings.

Timothy and Prairie Hay Continue to Decline

The principal hay markets are still very weak and in some instances are still lower. Relatively large stocks yet to be marketed and continued mild weather are bearish factors. Consumers consider hay prices too high as compared with grain prices. In the central western markets feeding corn can be bought at about $20 to $21 per ton and oats at about the same price while timothy hay sells at from $22 to $25 per ton.

Buyers continue to hold off expecting that receipts will increase as the spring season approaches when the producer must either market his hay or carry it until another season.

Alfalfa.—The demand for high grade alfalfa was good but lower grades were difficult to sell. Receipts of alfalfa at Kansas City were light as Kansas shippers were unable to load because of bad roads. Some hay from Idaho came into the market during the week. Dealers state that the market would absorb more alfalfa at current quotations than is being received at this time. Two cars of Idaho alfalfa arrived during the week and more is expected. Difficulty in getting the hay baled is said to be the reason for the delay in making shipments on the reduced freight rates from the northwest.

Cincinnati reported a decline of $6 per ton on western and $4 on local alfalfa. Western coast markets continue weak. Demand is light because of the good pasturage available which is being improved by good rains.

Prairie Hay.—Prairie prices were practically unchanged, being around $19 to $20 during the week but the market lacks firmness. The low price of timothy is a factor in the prairie market as well as the poor demand from feeders. Receipts are light.

Straw.—Quotations are lower at Cincinnati and Minneapolis, but unchanged at other markets. Wheat straw is quoted as follows: Richmond $16, Baltimore $14, Pittsburg $16.50, Cincinnati $13.50, Chicago $13, Minneapolis $7.50. Rye straw: New York $18, Minneapolis $8, Cincinnati $13.50. Oat straw: Kansas City $7.50, Chicago $13.50, Minneapolis $8.

Operation of Milk Plants in California

J. M. Henderson, Jr., President, the Associated Dairymen of California, Incorporated

In California the demands of the whole milk market have been so small in comparison with total production that the development of utility plants to care for the surplus has been an extremely vital phase of our dairy industry.

About three years ago, the Associated Dairymen of California was organized, and now includes in its membership some ten thousand dairymen. Plants have been gradually built and acquired so that in the near future about twenty will be in operation. From our experience in this connection, the three outstanding features have been: method of finance, scope of products manufactured, and standardization.

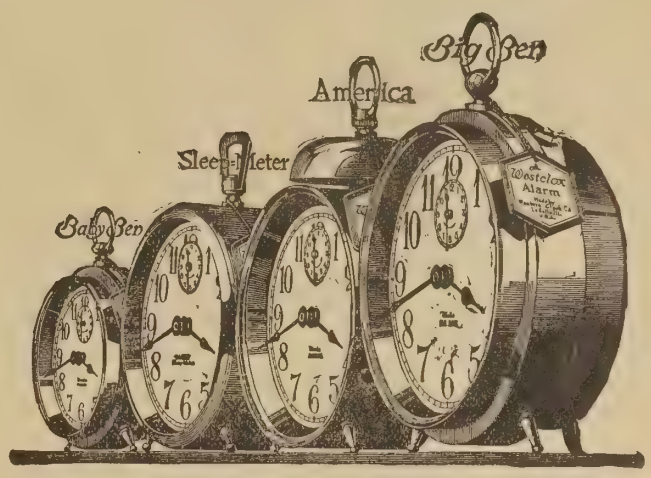
At the outset, in common with a great many other co-operative associations, we found ourselves woefully lacking in funds. The membership fee of $5.00 a cow was insufficient to provide capital for any adequate construction of plants. However, by borrowing we were able to provide, in part, for our needs. It was necessary to pay our members every two weeks so that practically our entire working capital consisted of the returns from the product handled in that period. This left us no margin to take advantage of seasonal conditions in manufacturing, such as making large quantities of cheese in the flush season when the price of butterfat was low, or to make other by-products which required holding any length of time; in fact, our limitations of finance confined us to very narrow bounds in both manufacturing and marketing. To overcome this we adopted a system of sixty-day acceptances which, in effect, is the collective pooling of both the association's and member's credit. Acceptances are made for the amount due members plus six per cent. These may be discounted at any local banks before maturity, but many of the members prefer to hold these notes and collect the interest.

One of our big problems is standardization. Our dairying country stretches from the Oregon to the Mexican border with varying conditions of feed and climate; therefore, the production of a uniform product calls for untiring efforts technically and a vast amount of educational work among dairymen. We have adopted a state brand called Cream O'Gold under which nothing but our highest grade products can be sold.

Every can of cream and milk is carefully graded. A certain standard is set for that which goes into the Cream O'Gold products. All raw material not complying with this standard goes into seconds. Then we send out field men to instruct the dairymen who have fallen below the standard as to the proper methods of preparing their milk and cream.

The high price of butter has turned a large number of consumers to oleomargarine who formally bought seconds, and hence we witness an unusual disparity in price between extras and the lower grades; therefore, quality production becomes increasingly important if we are to realize for the dairymen a maximum return.

As to equipment, our ultimate aim is to provide facilities to manufacture not only butter and cheese but all the by-products, so that we can quickly take advantage of market conditions. Supplementary to our manufacturing we are making a study of points of origin of milk in order that skimming and condensing plants may be installed to economize on our transportation costs.



Adequate financing, high standardization, and a well balanced manufacturing system should provide the dairymen with a sound foundation upon which to build.—National Milk Producers' Federation.

Brookfield Segis Hengerveld, Holstein cow owned by Geo. H. Van Wagener and C. A. Gilson of Michigan. In 7 days this cow has produced 387.5 lbs. of 3.7 per cent milk.

Westclox

—that's Big Ben's family name

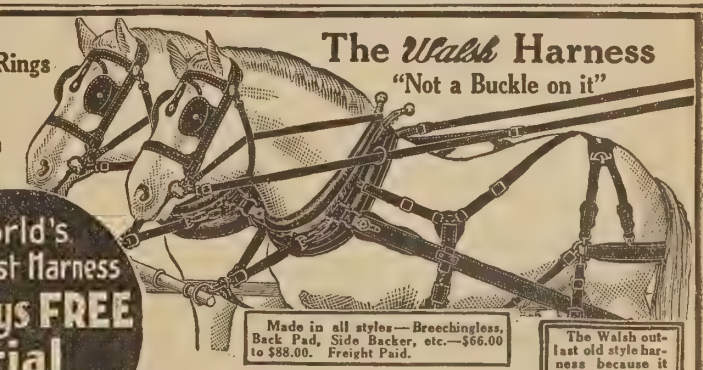
Big Ben thinks a lot of his family

HE helped little brother, Baby Ben, get a start. He introduced Sleep-Meter; and he spoke a good word for the *America* alarm, the oldest Westclox made.

So, today, wherever Big Ben is known, other Westclox are sure to get a welcome. On many farms you'll find Big Ben bossing the timekeeping job and other Westclox helping along in different rooms of the house. Several clocks, here and there, save many steps. You've discovered that yourself when you were busy about the house.

Back of Westclox popularity is an interesting reason. Every Westclox alarm is made *right* to make good. That same good construction principle that made Big Ben famous is used in all of them. Big Ben's family name, *Westclox*, can't go on the dial until the clock is *right* inside.

WESTERN CLOCK CO., LA SALLE, ILLINOIS, U.S.A.



Makers of *Westclox:* Big Ben, Baby Ben, Pocket Ben, Glo-Ben, America, Sleep-Meter, Jack o'Lantern

No Buckles
No Friction Rings
No Loops
No Billets
No Holes in Straps

The *Walsh* Harness

"Not a Buckle on it"

World's Strongest Harness
30 Days FREE Trial
9 Months to Pay

Made in all styles—Breechingless, Back Pad, Side Backer, etc.—$66.00 to $88.00. Freight Paid.

The Walsh outlast old style harness because it has no rings—no buckles.

Before you buy any harness let me send you this wonderful "No Buckle Harness" on 30 Days Free Trial. Post yourself on the latest and best in harness before you buy. Try the Walsh on your team 30 days—FREE—no obligations on your part. Send no money.

Look at it. Examine it. If you are not convinced that it is the handiest, strongest and best harness you ever saw or tried, pack it up and send it back. If you like it, keep it, and take *nine* months to pay for it.

No Patching—No Mending—No Repair Bills.

Buckles cut harness straps. Rings wear straps in two. Examine your buckle harness and prove this. You'll find more than 100 places where buckles and rings are wearing it; places you'll soon have to repair. The Walsh Harness will save trouble and expense because it has no rings to wear straps in two—no buckles to tear straps. The Walsh is a proven success—thousands in use for over 7 years. It is backed by the strongest guarantee ever put on a harness.

Lasts a lifetime—Besides having no buckles, no rings to wear the straps, it has all rust proof hardware—adjustable strap holders—improved hames, and many other improvements.

Costs less than buckle harness—The Walsh costs less than buckle harness of the same high-grade materials, yet it outwears two sets of the best buckle harness, and saves you cost of repairs.

Easy Payment Terms
SPECIAL THIS MONTH ONLY

Write today for FREE illustrated book, prices, easy payment terms, and full particulars of my 30 Day Trial Offer—also how you can earn money on the side showing Walsh Harness to your neighbors. Just say "send complete information about Walsh Harness."

I don't believe there is any other harness on the market that equals the Walsh in strength, handiness and comfort for the team at any price. HENRY P. PROVERT, Box 60

Caruso immortalized

A vast heritage of arts and literature has been bequeathed to the world by the passing centuries, but it remained for the Victrola to perform a similar service for music.

It has bridged the oblivion into which both singer and musician passed. The voice of Jenny Lind is forever stilled, but that of Caruso will live through all the ages. The greatest artists of the present generation have recorded their art for the Victrola, and so established the enduring evidence of their greatness.

There are Victrolas from $25 to $1500. Write to us for catalogs and name of nearest Victor dealer.

Wisconsin Holstein Sales Managers Organize

Action of far reaching influence concerning Holstein sales in Wisconsin was effected January 5 when twelve representatives from the various county Holstein associations and sales companies of Wisconsin met and formed the federation of Wisconsin sales managers. The purpose of the organization is to regulate the sales of black and white cattle in the Badger State.

This meeting and action is subsequent to the thought expressed at the state wide gathering of breeders held in Milwaukee the latter part of November. At this meeting there developed a desire to protect in every way possible the good name of Wisconsin Holsteins and Wisconsin breeders.

W. L. Baird was elected permanent president and L. L. Oldham was elected permanent secretary. Taking as his theme, "Let us resolve to sell 100 per cent efficiency and satisfaction with our cattle at our sales," Mr. Oldham stated that the purpose of the meeting was to draw up rules and regulations which might eventually govern all Holstein sales in Wisconsin.

He urged all present to consider that they were confronted with a task, which, if properly done, would be the greatest boon to the public sale and therefore would be of the greatest advertising benefit to all breeders of Holsteins in the state. Anyone interested in the management of public Holstein sales in the state is eligible to membership in the federation. Any sale desiring to be governed by the rules of the Federation must make application to the secretary. Such application must bear the approval of a county Holstein association or a Holstein sales company. Breeders desiring to disperse their herds are included in this ruling.

The following rules and regulations were adopted. They will apply and will be enforced at such sales as are governed by this Federation. Others will be added from time to time as they are deemed necessary:

1. No animal will be sold unless registration papers, or properly made application for registry, or, in case application be made in the National secretary's office, application marked duplicate and properly signed transfer, are in the hands of the sales manager at time of sale. (In the last 2 cases no money will be paid consignors for animals until registration is completed.)

2. All animals of breeding age are guaranteed breeders at time of sale only to the extent of the purchase price thereof.

3. All animals are sold as represented. In those cases where remarks covering animals or catalog errors are necessary, they must be made at ringside.

4. All animals must be recently tested for tuberculosis, test sheets in sales manager's hands, and will be furnished on request.

5. All consignors to sell on a 60-day retest privilege. If purchaser wishes to retest he must keep animals in sanitary quarters either isolated or in a herd that the state veterinarian guarantees is reasonably free from tuberculosis, must notify the consignor 30 days before retest, and allow him the privilege of having some one present during such retest. It is further understood that said reacting animals must show lesions on slaughter, said slaughter must be under federal supervision. The 60-day period is figured as 60 days from date of sale or, in case state law requires, 60 days

Snug and Warm Inside

The air cells in the Hollow Tile walls are non-conductors of heat. They keep your barn dry and warm throughout the winter. They also insulate against the heat in summer and protect the health of your stock the year 'round.

HOLLOW TILE

The Most Economical Form of Permanent Construction

Made in large, rapidly laid units, Hollow Tile saves materials and labor. First costs are last costs as depreciation is practically eliminated by the ever-lasting material. You are not forever repairing and repainting.

from date of entrance into said state. No retest accepted where animals are not in normal condition when tested.

6. By-bidding is absolutely prohibited.

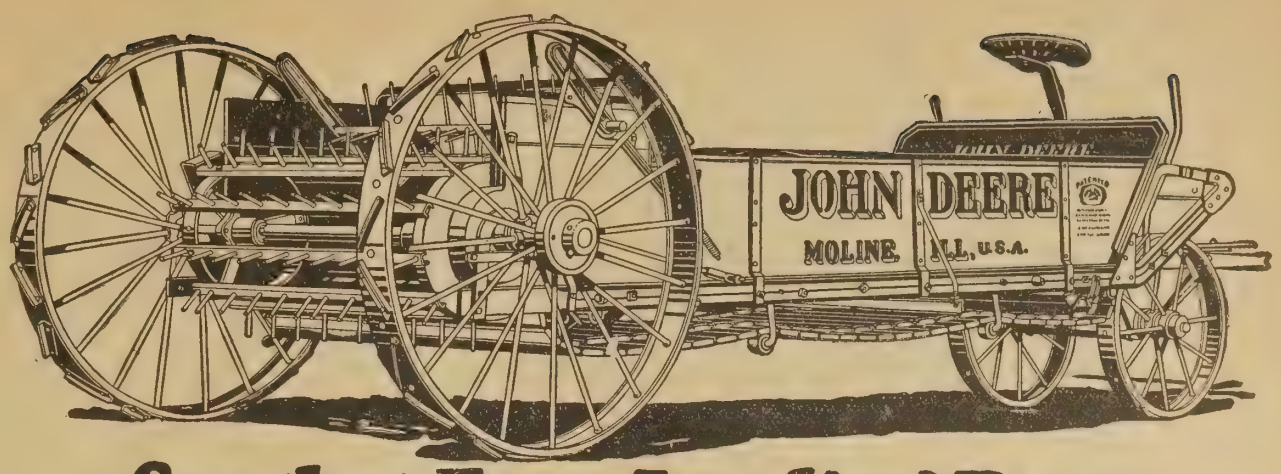
Consignors violating any of these provisions will be barred from future sales held under the rulings of this federation until such a time as they may be reinstated in honorable standing at some meeting of the federation of Wisconsin sales managers. Violators will be listed and their names made known to all members of this federation.

These rulings have been submitted to the board of directors of the State Holstein-Friesian Breeders' Association and have met with their approval and endorsement.

Such sales as are governed by these rulings will be designated by a seal of approval bearing a fitting inscription and conveying the thought that the rules and regulations made by the Federation of Wisconsin Sales Managers govern the sales. Such seals will be furnished on appplication to the Secretary of the State Association.

These rulings must be published and the seal of approval must be freely used in all advertising and catalogues of the sales so governed. —Holstein Association of Wisconsin.

The Cow and Her Keeper



HOARD'S DAIRYMAN:—The cow has been wisely referred to as the greatest animal friend of man. Also she has been spoken of as the foster-mother of the race. For the past few months we have noticed that the cow has been consistently and persistently turning out our most valuable human food, and her keepers have profited thereby. I will point you to the dairy sections of this country as the places least affected by this season's so-called business and financial depression.

We have been saying a lot of good things for a good while about the dairy cows of this country. We have recognized their wonderful ability to convert cheap, raw farm products into high priced and indispensable food products. We have profited and grown fat from this billion dollar industry, and in a measure have recognized the merits of the producer. I do believe, however, that the rank and file of cow keepers are treating neither the cow nor themselves fairly. Improvements have come on apace; in general we have rebelled against the hard way of doing things, but our dairy barns have profited too little in this respect. A cow produces in proportion as she is fed and cared for; great influence on her production is caused by her bodily comfort. How can an animal get even her actual necessities in a crude, poorly ventilated, poorly lighted, and unequipped barn or shed? The greatest human food and the one most sensitive to contamination is cow's milk, and it should be produced in a decent and respectable place. Can we ask our boys to go into dark, ill smelling stables morning and night to milk dirty and poorly kept cows, and expect these same boys to enjoy the work and to look forward to staying on the old farm? In simple words, it seems that the time has come when we should equip our dairy barns in such manner that we can produce a sanitary product, make the work easier, make the cow more comfortable and healthful, and secure more inviting conditions generally.

Every once in a while I meet a man who tells me that he was raised on a dairy farm but is now in some other kind of business. If he confesses the real truth regarding his early conception of the business, I discover that he was not very enthusiastic over the work. The old barn was a good deal of a dungeon—more ill-smelling than some of the dungeons of our early ancestors; for while theirs were dark, damp, and cold, they did not have the foul air or the labor connected with them. The fact is that dairy business is a good, profitable, wholesome, beneficial business; and when properly conducted is the most sure of profit. It can afford decent equipment and labor-saving devices; above all things it can afford fresh air, sunlight, solid floors, and practical workable stalls for the cows.

We are coming to better things, and that rapidly. Let us not overlook our dairy barn when we make plans for future improvement.

Nebraska. A. L. HAECKER.

See that Easy-Loading Box Combined with High Drive Wheels

IT'S the high lifting of every forkful that makes the job of loading manure a hard one. Lifting manure hip high, the height of the box on the John Deere Spreader, is comparatively easy. On this spreader, the average height of the box from the ground is only 36 inches.

Combined with the easy-loading feature are extra high drive wheels that furnish unusual traction and lighten the draft materially. On no other spreader can you get this effective combination.

This Big Implement Book And Two Others—FREE

"Better Farm Implements" contains 114 pages of valuable information on a full line of labor-saving farm implements. A book you will keep.

"Soil Fertilizers" tells all about barnyard manure, how to preserve it, when, and how to use it. Written by an agricultural authority.

John Deere Spreader booklet fully illustrates and describes the best implement investment you can make.

To get these books free, drop a line to John Deere, Moline, Ill., and ask for Package S 514

JOHN DEERE SPREADER
The SPREADER with the BEATER on the Axle

Mounting the beater on the axle of the John Deere Spreader, a patented feature, makes possible many other important advantages.

It gives you a spreader with only about half the parts used on other spreaders—no clutches to wear and slip — no chains to break; no extra beaters; practically no adjustments for you to make. The John Deere is the simplest manure spreader built.

All the main working parts, including the beater drive, are mounted on the axle where they can't get out of line to cause binding, heavy draft and breakage.

The drive gears are enclosed in a dust-proof, oil-tight case—they will wear for years.

Another important and patented feature is the revolving rake which prevents bunching and insures an even distribution of the manure, but does not add one extra pound to the draft.

The straw spreading attachment for the John Deere Spreader —a valuable device that costs but little—gives you a perfect straw and manure spreader combined in one.

It's the extra years of service and the low operating cost plus its many operating advantages that makes the John Deere an unusually profitable machinery investment. See your John Deere dealer. Put this profit maker to work this spring.

Pennsylvania Dairymen at Harrisburg

(Continued on page 128)

pure-bred Guernsey heifers. This was a small fraction of the 379 pure-bred animals valued at $67,259 now owned by these club members all over the state but was enough to attract attention and thought from those who are still trying to get along with "just cows". Those in charge of the work say that the clubs were the means of placing the first pure-breds on 200 farms in this state.

The quality of creamery and dairy butter sent in by buttermakers for judging was good, according to Professor A. A. Borland of the Pennsylvania State College who did the judging. Greenville Dairy Company won first in the creamery class while Grove City Creamery was second and Westbrook Dairy and Produce Company was third. When it came to butter made on the farm C. Allen May took first prize; Rose Greason scored second; and John A. Harmon was third. The first prize for raw milk went to P. R. Whitehead while Chester County captured second and third through Benj. Sharples and E. Baker Pyle respectively. Two large Philadelphia distributing firms carried off first and second honors for pasteurized milk, Supplee-Wills-Jones winning over Abbott's Alderney Dairy, while H. J. Jones was third. Belle Alto Farm won in the certified milk class with International Correspondence School Farm second and Edgewood Dairies third.

⚜

Perhaps the livest gathering of any of the twelve interests holding sessions during the week was the first annual meeting of the State Holstein-Friesian Association. It showed that there was no lack of interest in this popular black and white breed when it comes to producing market milk. The morning session was given over to addresses with Peter A. Small, of Ohio, the main speaker. The afternoon session was devoted to business including the adoption of a constitution and by-laws and a thorough discussion of the need and advantages of a paid secretary for the state organization. The one thing that seemed to stand out among the leaders was that the new association should be built from the bottom up rather than from the top down. It is to be a federation of the many strong Holstein-Friesian clubs already in the state rather than an attempt to absorb and overshadow them.

It would be hard to mention any requirement of dairymen which was not represented by the commercial interests at the show. Barn equipment, milking machines, silos, separators, feeds, and the hundred and one other needs of modern dairying were all surrounded by interested groups each day and the exhibitors expressed satisfaction with the business they did.

Many of the larger breeders attended the meeting of the State Veterinary-Medical Association held early in the week when they discussed abortion and tuberculosis eradication. The recent announcement that Pennsylvania now stands third in the list of accredited herds in this country was a matter for professional rejoicing. With 418 herds now guaranteed by the federal and state authorities to be entirely free from tuberculosis we lead Virginia and are surpassed only by Wisconsin and Minnesota. THOS. H. WITTKORN.

Pennsylvania.

Telling Farmers' Wives

A farmer's wife in Trumbull County, Ohio, wrote to ask,

"Why don't you tell us farmers' wives as much about Jell-O as you do the city women, and why not give us the same chance to get Jell-O when we want it?"

That was some time ago, and since then Jell-O has been placed on sale in practically every general store in America, including the one at the Corners and the Cross Roads, where it can be obtained as easily as at the groceries in the big towns.

The Jell-O Book is free to every woman everywhere. It is full of recipes for the desserts and salads that are most popular just now, not only because they are cheaper than almost anything else that is worth serving, but are really better than any made at much greater expense. And most of them can be made in a minute.

The Jell-O Book will be sent to you if you will write and ask for it.

Jell-O is put up in six pure fruit flavors: Strawberry, Raspberry, Lemon, Orange, Cherry, Chocolate, and is sold by all grocers and general stores, 2 packages for 25 cents.

TRADE MARK

BURRELL B-L-K MILKER

These Four Distinctive Features

THESE four distinctive Burrell features have made the Burrell Milker the choice of those dairymen who demand of the milking machine that it shall milk the cows clean; develop the milk-giving ability of their cows; and draw the milk in a sanitary way.

(1) The Burrell Positive Relief Pulsator

The Burrell Positive Relief Pulsator produces sharp, well-defined periods of suction and relief on the teats. The *completely intermittent* nature of these pulsations is absolutely essential to thorough and efficient milking. This complete relief, between each period of suction, insures natural circulation in the teats and prevents the congestion which would result from long periods of suction without relief

(2) The Burrell Moisture Trap

With any milking machine, some vapor and spray from the milk is sucked into the tube which runs to the vacuum pipe. It becomes contaminated there, condenses and, unless prevented, runs back into the pail. The Burrell Moisture Trap is distinctive because of its check valve located on a stand pipe above the liquid in the trap, which makes it impossible for this liquid to get into the milk.

(3) The Burrell Automatic Controller

The Burrell Automatic Controller regulates the suction to the requirements of the individual cow. With the easy milker or during the main part of the milking, when milk is flowing freely, the suction is automatically decreased. With the hard milker or toward the end of the milking, when the milk is flowing less freely, the suction is automatically increased. This exclusive Burrell feature has earned for the Burrell Milker the reputation that "*It Milks the Cows Clean.*"

(4) The Burrell Universal Teat Cup

The distinctive feature of the Burrell Universal Teat Cup is its ring-shaped air reservoir at the top of the cup. When the vacuum suck is applied, the air in this reservoir is pulled down, and in rushing over the square shoulder of the reservoir creates an air cushion which compresses and supports the teat in such a way as to avoid inflammation of the tissues.

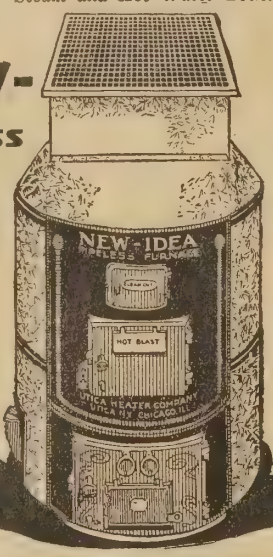
Change to Warm Comfort in a Day

6 A.M. 6 P.M.

There will be six weeks or more of cold weather this winter. Why not make them more endurable with a warm, comfortable house? And then think of the winters to come!

In one day you can put up a New Idea Pipeless Furnace without interfering with the stoves. Leave them up until the New Idea is going.

Then: Every room and hall at 70 degrees—hotter if you like; a cool cellar for vegetables; no carrying ashes and coal for stoves; a cleaner house.



A New Idea costs little more than a good stove (lower prices again prevail) and your fuel bill will be less than ever before. Burn any fuel you like.

Ask the New Idea dealer nearest you for full details. Read the money-back written guarantee of satisfaction. If you don't know his name write us for it and for catalog. Expert heating advice, free.

UTICA HEATER COMPANY

Marketing New Zealand Produce

GEO. OSBORNE, NEW ZEALAND

THE British government is again the purchaser of the exportable surplus of New Zealand butter. The cheese contract did not continue beyond its terminating date, July 31, 1920. The matter of the disposal of New Zealand dairy produce may not at first appear to possess any interest for American readers, but when it is stated that the United States is looked at from this end as a possible outlet for considerable shipments of butter for the winter trade, even as Western Canada already is, it is likely that American producers will hear further from New Zealand in due time. Ever since November, 1915, the Imperial government has been sole purchaser of cheese made in this country, except such as was required for local consumption. That, it may be stated in passing, was not made very much of, inasmuch as the people of New Zealand are not large eaters of cheese. The price at which the Imperial government has bought this season's butter is 280 shillings per 112 pounds, equal to 50 cents per pound, converting one pound sterling into $4, about the present rate of exchange. This is f. o. b. New Zealand ports. The contract runs until March 31st, 1921. There were sales made to Western Canada, before the negotiations with the Imperial government, of about 2,500 tons of the current season's make, spread over shipments. These sales the Imperial government has agreed shall go through.

The Dominion government has been all along placed in a rather invidious position with respect to these sales to the Imperial government in that it acted as its agent and also as the channel of communication between the vendors and their one Imperial customer. It has also had to take into account the New Zealand consumer with respect to the supply and price of butter. The last has been a very thorny path to tread and the end of it is not yet in sight. The prime minister of the Dominion has been the go-between, and a very arduous and thankless task he and ministers who have acted for him when he was in England from time to time have had.

The necessity of securing cheese for the British army during the war was the reason for the purchases made in this country by the British government. At first, November, 1915, about one-third of the quantity usually exported was purchased. The offer was 13 cents per pound. This was refused and a sale was made at 14½ cents after much correspondence. Successive advances made in the price from time to time were as follows: Whole exportable surplus, 1916—1917, 19 cents; 1917—1918, 20 cents; 1918—1919, 21½ cents. The price is for first grade cheese only on government graders notes; other grades were lower in price. The prices were for f. o. b. ocean steamer, the Imperial government assuming all responsibility for storage after 14 days, also for insurance (marine, war risk, and fire) and paying all freight and any other charges. The total quantity purchased was approximately 210,000 long tons and the price paid equal to $105,478,000.

There was intense dissatisfaction here when it was learned that, after taking into account all New Zealand's disadvantages of a geographical character by reason of its remoteness from Great Britain, Canadian producers were receiving so much higher returns for their cheese. This led to much protesting here and resulted in advances made in the prices every season. Then more resentment was created by the fact that, when the war ended, British dairy farmers had free markets in Great Britain for all the cheese and butter they produced and sent in for sale. However, the purchase of cheese came to an end so far as New Zealand was concerned and producers were free from the 31st of July to market as they thought best. Sales have been made to the United Kingdom of 15,000 long tons of this season's make, and 21,000 tons will go on consignment, an additional 4,000 tons will be marketed through a new company, the directorate of which will consist of an equal number of representatives of the dairy farmers and an equal number of representatives of the Co-operative Wholesale Society of England which has an enormous distribution in the manufacturing districts of England. Prices are to be fixed by a board composed of the above, but in the fixation the farmers' representatives shall have a preponderating vote. The prices realized by factories which have sold their output for the current season are between 28 cents and 29¾ cents. The higher prices were paid more recently. It is the custom of South Island factories to sell, that of the North Island factories to consign through well-known British houses. The cheese future is faced with the fullest confidence by producers here. There is a growing feeling that it is only a matter of time when the United States will be able to take fair parcels of New Zealand cheese. The inevitable advance in the price of butter for domestic consumption to bring it into parity with its export value (the price to be paid by the Imperial government) has caused much commotion locally and considerable discrimination on the part of both town and country people. Some hard things have been said and written on both sides.

The ruling retail price has been equal to 37 cents per pound, thanks to a government subsidy. The difference between 37 cents and 50 cents is far too wide to be bridged in this way. The farmers very naturally resented everybody, rich and poor alike, getting butter at a price below the true

(Continued on page 150)

TWINS—SONS OF E. A. RHOTEN, OREGON

Does the difference in milk consumed by these two boys account for their difference in size? Mr. Rhoten thinks it does. He states that the smaller of the two has constantly refused to drink milk—while the larger consumes it freely. They are twins, and live under the same care—one does not use milk, the other does. One such case may not furnish final proof of the essential character of milk in the nourishment of children, but, multiplied by the great number of examples familiar to those who have considered the food value of milk, it is a strong evidence.

The First Man To Fill Out The Mood Change Chart

William J. Burns

Head Of The Wm. J. Burns International Detective Agency

WHEN the Mood Change Chart was printed, Mr. Edison said "Who is the most sophisticated man in New York? That man will be an ideal subject for the Mood Change Test because he will be the least susceptible to emotion."

Mr. Edison selected William J. Burns, the great detective, as the most sophisticated man and Mr. Burns gladly made the test to assist Mr. Edison in his research work. Mr. Burns' chart is reproduced. It registers a decided mood change but it represents the emotional effects of music on only one man. Mr. Edison needs thousands of these charts because his research work must be conducted on the law of averages.

MOOD CHANGE CHART

An Analysis of Your Mental Reactions to Music, as RE-CREATED by the New Edison, "the Phonograph with a Soul."

Address

Will You Join Mr. Edison in an Experiment?

2400 years ago, Confucius called music "The sacred tongue of God." 400 years ago, Martin Luther said: "Music is the only art that can calm the agitations of the soul." 116 years ago, Napoleon said: "Music is the art to which law makers ought to give the greatest encouragement."

Mr. Edison has recently produced a new phonograph of such perfect realism that its RE-CREATION of music cannot be distinguished from the original music. As a result of this wonderful new invention, every home can now enjoy the full benefits of the world's best music.

For many centuries, the power of music has been appreciated—but never has it been fully understood. For the purpose of ascertaining and classifying the effects of music on the minds and moods of mankind, Mr. Edison has associated with himself world-famed psychologists. Much research work has already been done.

Will you assist by analyzing your own mental reactions to music, and those of as many friends, as you can interest in the work? Your co-operation will be appreciated by Mr. Edison and his associates.

Please examine the chart that is reproduced above. The Edison dealer in your locality will furnish you as many of these charts as you require.

If you do not own a New Edison, the Edison dealer in your locality will welcome your making the test in his store. Should you like to call in some of your friends, the Edison dealer will probably be willing to loan you an instrument and the necessary RE-CREATIONS, so that you can make the test in your own home. Watch for his announcement in your local newspaper. THOMAS A. EDISON, Inc., Orange, N.J.

"You Have Earned A Premium of 40c Per 100 on YOUR Milk"

Messages like the above are welcomed by all dairymen and are a fact among those who have had the foresight to use the

HINMAN MILKER

On January 6th, J. Cohoon of Brisben, N. Y., received such a notice from the Borden Company stating that the average bacteria count for period ending December 31st was but 1300, entitling him to a premium of 40c. a hundred on his 7256 lbs. of milk, ($29 extra at one time). The Minneapolis Board of Health tested milk of Spirit Hill Farm, Jordan, Minn., and found the bacteria count as low as 600. This is remarkable. Both of the above employ Hinman Milkers.

Easiest to Operate and Clean. Lowest in Price
Over 50,000 in Daily Use

So simple that expensive help is not needed. Boys and girls from 10 years up can quickly and easily milk with these dependable single-unit Hinmans, instantly adaptable for each individual cow.

Our Catalog Tells A Convincing Story. Send For It

and we will include a copy of our paper "The Hinman Handshake" giving facts about the milk tests above referred to, and experiences of many other users.

Oneida, New York
We also make Electric Milkers with 1-6 H. P. motor operating on alternating or direct current

Better Stall Floors

RIGHT now is the time to go over your barn plans again and make sure of every point before you start to build. Take stall floors, for instance. Probably no detail of barn construction more directly effects the health and productiveness of dairy cows, and you will be well repaid for the extra care devoted to the selection of the most suitable material.

The practical value of correct flooring for stalls and pens and the peculiar merits of Circle A Cork Brick are explained in the 28-page, illustrated book "Better Stall Floors" which will be sent on request. Certainly, it is important for you to know that, by using Circle A Cork Brick, you can insure sanitation and durability and, at the same time, have floors that are comfortable, nonslippery, easily cleaned and economical. Be sure to get this book before you make your final decision. There is no charge for it.

Armstrong Cork & Insulation Company, 112 Twenty-Fourth Street, Pittsburgh, Pa.

New York Butter Market

NEW YORK CITY, FEBRUARY 1:—Fearing a decided slump of butter prices, which now seems inevitable, receivers are exerting themselves to the utmost at present to keep their current stocks moving. There is a general disposition to shade prices whenever it seems necessary in order to make a prompt sale, the result being a fluctuating, unsatisfactory market. Danish butter, as in weeks past, is the factor which is having the most marked effect on general conditions. A great percentage of the large shipment that was received two weeks ago remains as yet in first hands. In addition, 700 casks and 1,558 boxes of Danish butter were received last week, and 1,594 casks, 952 boxes, and 28 half casks have been received and became available for distribution yesterday. A further shipment of approximately 4,300 casks is due to arrive tomorrow. The particularly disquieting feature of Danish butter importation at the present time is the fact that agents are soliciting orders for February delivery at the low price of 44c, in some instances, with transportation charges and duty paid. How a decided slump in butter prices can be avoided is a question which seems to have no solution.

Domestic butter receipts have increased quite materially during the past week. That has been due to a normal increase in production and also to the fact that shipments of butter have been diverted from other points to this market. Besides the Danish butter, domestic receipts have been augmented by the arrival of 3,920 boxes of New Zealand butter during the past week. At the present time a cargo of 6,000 boxes of Argentine butter is at a dock in Boston. It is not as yet known whether or not that butter will be forwarded to this port.

Consumptive demand has remained good throughout the past week; in fact, it has been better than for some time past. That is undoubtedly the result of the colder weather which has prevailed in this section of the country for several days. Demand is principally for fresh butter as is shown by the fact that less than a half million pounds have been drawn from storages during the past week. Storage supplies are practically 9½ million pounds as compared to 13½ million pounds one year ago. Holders of storage butter, who have met with great losses during the last several months, are exceedingly anxious to move their remaining holdings before the close of the winter months. This has been a very unfortunate year for so-called butter speculators.

The market closed today weak and very inactive with established quotations as follows: Extras (92 score), 49½c; higher scoring than extras (93 score or higher), 50@50½c; firsts (90—91 score), 46@48½c; firsts (88—89 score), 43@45c; and, seconds (83—87 score), 36@41½c. Danish butter is weak and is moving at prices of 48½@49½c; New Zealand butter is quoted at 47½@48c; Holland butter at 41@45c; and Argentine butter at 39@41c.

W. B. LIVERANCE.

Hot Lunches on a Cold Day

HOARD'S DAIRYMAN:—Cold lunches on a winter's day are not relished by the men working up the winter supply of wood. I have found that scalloped potatoes and baked beans, baked, then placed on hot soapstones a satisfactory method of solving this cold lunch problem. A jug of hot coffee, also placed on the stone and all wrapped snugly in blankets, completes the dinner. I have sent lunch for eight men in this manner and it has always remained hot for dinner.

Wisconsin. (MRS.) W. H. GRANZOW.

PLANT MORE FRUIT

Here's a Book of Valuable Help
Costs a dime. Worth dollars

HERE'S a Book by U. P. Hedrick, who is acknowledged to be one of the greatest living authorities on fruits.

He has written a wonderful little book, that tells you just the things you want to know about the kinds of fruit to plant; and exactly how, when and where to plant them.

It is filled with invaluable information as to care and fare. The only book of its kind yet published. Worth many a dollar, but will be sent *to you for 10 cents.*

Eastern Dairy Notes

Milk Lower in New York—A board of arbitration headed by Federal Judge Edwin L. Garvin has lately decided that no increase of wages should be granted to employees of milk distributors in the metropolitan district, because living costs are on a decline.

Following this decision, closing a three months' controversy, Borden's Farm Products company has announced through Patrick D. Fox, president, that the wage settlement and the farmer's recent reduction of 1¼ cents a quart, effective February 1, would make possible a reduction of about one cent to the consumer. This reduction is expected to be general. Mr. Fox said that any price reduction by the producer would be passed on to the consumer.

Pennsylvania Herds Now Third in U. S. Accredited List—Pennsylvania is now third among the states of the Union in the number of herds of accredited cattle, according to an announcement by Fred Rasmussen, state secretary of agriculture. Only Wisconsin and Minnesota now have more officially accredited herds than Pennsylvania.

Pennsylvania now has 418 herds of cattle guaranteed by state and federal authorities to be free of tuberculosis.

Placing Agricultural Immigrants on Farms—The immigration department at Ellis Island is anxious to place agricultural immigrants on farms instead of having them flock to the over-crowded cities where there are already thousands out of employment.

Pennsylvania farm bureau agents are urging that some of the best may be induced to purchase, if possible, or at least rent some of the hundreds of abandoned farms in the state. The farm bureau expects to take some action at once.

Pennsylvania. E. M. L. BLANCHER.

Missouri State Holstein Meeting

Missouri Holstein breeders met January 18th at Columbia during Farmers' Week at the University of Missouri. A new constitution and by-laws were adopted for the state association. One provision is that all sales with which the association is connected in the future will be held under its auspices. A resolution was passed declaring that the membership will not participate individually or as an organization in any sale of Holsteins not held in co-operation with the association. A sale committee and an educational committee were provided for, to be selected by the board of directors. The legislative committee recommended that the sanitary laws of Missouri be amended to provide that all cattle coming into the state from herds not under Federal supervision must be held sixty days in quarantine and retested before being distributed in the state. C. M. Long was elected president; C. E. Driver, vice-president; and Glenn Davis, secretary-treasurer.

"High-Priced" Unicorn Makes Low-Cost Feed

Feed this way with clover hay

For November, four out of the ten highest cows in all Indiana cow testing associations were fed Unicorn.

Average milk . . 1609.5 lbs.
Average fat . . . 59.9 lbs.

Those who are not feeding Unicorn say that it is "high-priced."

Those who *are* feeding Unicorn say that it gives them a greater profit than they can get with any other feed.

The Unicorn feeders know that it's not the price of a thing that counts, but how much you get for your money.

There's more milk *and more profit* in a ton of Unicorn than there is in a ton of any other feed—home-mixed or boughten.

Use Unicorn and cut down your feed bills. Goes farther. Lasts longer. Actually *costs less*—not more.

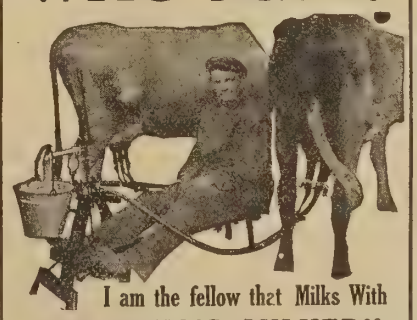
An Easy Way to Remove Afterbirth

If you want your cows to be healthy and productive, by all means see that the afterbirth comes out in a natural way, for the infection will injure the animal's health if you don't.

The best way to get rid of a retained afterbirth is to let B-K promptly reduce inflammation, suppress infection, destroy foul odors, soothe and heal torn tissues and permit the afterbirth to come away without assistance.

If treatment is given promptly, the case will respond at once. If delayed, infection advanced, foul odors present, etc., then the first two or three applications should be stronger.



Your cow will not be injured or torn in any way, as she will be if you try to remove this afterbirth by the unnatural hand method. B-K prevents infection and leaves no part to decay. Sold by dealers in your town.

WHO AM I?

I am the fellow that Milks With

"MEHRING'S MILKER"

It makes me smile when I see poor guys pulling away by hand. Buy a Mehring Milker and you can smile too. It was the first practical milker and still has the lead in speed, efficiency and cheapness of operation and repair. Send for a catalogue and be convinced. It will milk one or two cows at once. Price $80 cash or $85 on trial. Also engine power milkers.

W. M. MEHRING, Keymar, Maryland.

FARMERS

HANDY WAGON

Low steel wheels, wide tires, make loading and handling easier. We furnish Steel Wheels to fit any axle, to carry any load. Plain or grooved tire. Catalogue sent free.

Young Women Wanted To Work On

Bradley KNIT WEAR

Located at Delavan, Wisconsin. The Bradley Mills are a short ride from Chicago or Milwaukee. They are large, clean, well lighted and ventilated. The work is of a kind that naturally appeals to women. There is no comparison between the light interesting work in the sociable, friendly atmosphere of the Bradley Mills and the trying conditions under which a woman must work in the average city plant. The work is readily learned so that new employees soon become expert and in a position to earn higher wages. There are no lay off seasons. To work for the Bradley Knitting Co. means steady all year round employment under ideal working and exceptionally fine living conditions. The Bradley Knitting Mills present an unusual fine opportunity for the young woman who wants to make her own way in the world and at the same time get more out of life than a mere living. Positions are waiting for you. For particulars write

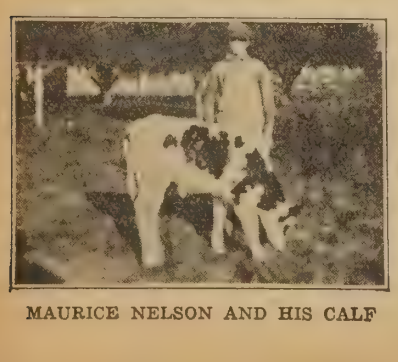
HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

FROM OUR JUNIOR CORRESPONDENTS

WE hope that this page will interest the juniors quite as much as it did us when we were making it up. We think the letters which appear here are good indeed because they tell us some interesting facts. But not alone this, for they were very well written and we think that they demonstrate a very important accomplishment for all of us to attempt to attain the art of letter writing. We are proud to emphasize the fact that our juniors are making some rapid strides in this direction and believe that these letters prove our point. There were many others received during the past month which are very good and which we would like to have appear here, but since our space is limited we had to confine ourselves to what we considered the very best ones at this time.



This bit of advice may not be out of place here. How many of you juniors read over your letters after you have written them before sending them? This is a most excellent practice to observe because many of the mistakes which we make when we are writing in a hurry will be caught in this way. Two people may say practically the same thing, but one may tell it in a far more interesting manner than the other. A little thought about this matter after our letters are written usually results in a better piece of work. I have heard boys and girls say that they never could write a good hand. We don't believe this. Good penmanship is the result of careful practice. The good penman is the fellow who has always been careful about making the letters of the alphabet correctly, and it soon becomes easier for him to write a good hand than one which can hardly be read. All of the letters which appear on this page were very easy to read because they were plainly and neatly written. This is one reason why we liked them so much. What others can do, you can do, so don't give up trying.

Hoard's Dairyman Juniors:—I received my fob, button, and creed yesterday and am well pleased with them. I am especially well pleased with the creed and I will try and live up to it. We are milking ten cows now, most of which are pure-bred Holsteins. We believe in pure-bred cattle and so are trying to sell off the grades and secure pure-breds.

It was through the efforts of the boys' and girls' clubs of Idaho that I secured my Holstein heifer. Thirty-two head of pure-bred Holsteins and fifty head of pure-bred Jerseys were shipped in from Washington and Oregon to Idaho. I received my heifer in May and in the middle of September she calved and I became the proud possessor of a pure-bred Holstein bull calf. He sure is a fine one and I value him at $150 right now. Excella Mercedes Fayne, which is my heifer's name, is a true dairy cow all over from her head to her tail. She gave over forty pounds of milk when she freshened and is giving thirty-five pounds now.

I am 13 years old and am a Freshman in high school. I am enclosing a picture of my calf. I would like to hear from some of the other juniors. My address is Boise, Idaho. With best luck to all the juniors,

Idaho. Maurice Nelson.

MAURICE NELSON AND HIS CALF

Hoard's Dairyman Juniors:—I received the knife on Christmas Day and I think it is a very fine present. I want to join the juniors' club and am enclosing the coupon taken from your paper; also one for my brother, Thaddeus. He is a real dairyman for he takes care of 16 pure-bred Holstein calves both night and morning. And he also helps dad run the milking machine.

HESTER AND SOME OF HER FRIENDS

THADDEUS, DAVID, AND PEANUTS

Thaddeus and I have four Bantams. I take care of mother's hens and I expect to have a flock of my own next year. We have a couple of saddle horses and we ride a great deal, especially in summer. Sometimes we borrow a horse and my younger brother, David, who is nine years old, goes along with us up into the mountains. We usually take a lunch and stay all day. We have lots of fun climbing, playing Indian, and cowboy, and gathering pine cones and queer stones. We go in swimming in the river every warm day and sometimes mother allows us to take blankets and go down in the willows by the river and sleep on the ground like real hunters and trappers. One night the horses came and smelled us. Often we take off our shoes and stockings and wade across to a nicer place on the other side.

We are skating on the river now. The boys got new skates for Christmas. We all read Hoard's Dairyman and think that it is a very fine paper.

Montana. Hester Hunt.

Hoard's Dairyman Juniors:—I have received your letter and I am very glad to know that you have received mine. Christmas Day I had a good time, and I now have a calf all of my own. But our farm bureau has no calf club and I don't know of any one else around here that has joined the club. I have read my creed over a number of times and I would like to learn it if I have the time. We have eight little calves and nine big ones. About a month ago, papa bought a big Shorthorn cow which gives about seven gallons of milk a day, and she gives more than any other cow in our barn. I milk her and I have to empty a three-gallon pail twice each time when it is three-fourths full. I help with most of the chores. I put the cows and calves out and get the hay down in the morning. In the evening I put the cows and calves in the stable and help papa with the chores. We are without a hired man until the first of March.

Illinois. Grover Thomas.

Hoard's Dairyman Juniors:—I received my pen knife with my name on it and I want to thank you very much for so useful a gift. And I also want to thank you for the three dollars for winning the prize. I have started a bank account in the Ridgely bank with it and hope to keep adding to it all of the time. I am proud to be a member of the junior club.

OWEN LYNCH AND HIS DOG

My father has helped to make the eastern shore part of Maryland one of the leading dairy sections of the East. He has a fine herd of thoroughbred Holstein registered cattle which we are all proud of.

I am 12 years old and in the fifth grade. We live in a large, brick, colonial house that was built in 1783. I am the owner of a cow and calf and I also have two mules of my own.

Wishing all the juniors a very Happy New Year, I am

Maryland. Owen Lynch.

Hoard's Dairyman Juniors:—Well, I am just going to write a few lines to thank you for the present. I got my subscriptions this way. First I went to my nearest neighbor, next I asked father, then I went to the election and got some more there, and at last I went to another of our neighbors.

JOHN HOLLAND AND HIS PET

We are milking fourteen cows now and we have a pure-bred Holstein bull. We also have two calves, one Holstein and the other Guernsey. They are both heifers. We have nine horses and one Indian pony, five brood sows and one Chester White boar that runs away and we have to chase him home. In the picture the cow I am sitting on is a pet.

Wisconsin. John Holland.

Hoard's Dairyman Juniors:—As I have not written for a long time, I thought I would write and tell you about club work in this part of the state. There are quite a few poultry clubs in the county, but no pig clubs until last spring when Mr. Turner started one, with Kenneth Craig and Lynn Patton as president and secretary. Other members were Marcus Craig, Joe Smerchec, Willard Collins, and two others whose names I have forgotten.

My pig gained 163 lbs. while in the contest, which was 92 days, at a feed cost of $10.09. I got first prize on my boar and gilt in the open class, and third place in the pig club class. My gilt was a little too heavy in the fore quarters, but stood on her feet extra good. The boar was really the best pig in the litter, being leggier, bigger boned, and smoother, but he has slightly long pasterns. I will keep three of my gilts for brood sows in the pig club work for next year.

I bred them to a big boned, long legged boar raised at Charter Oak farm. He's a little rough built and doesn't stand up on his feet the way he should, but at that he is the best boar around here. The big boned, rainbow backed, tall, yet broad kind of hogs look best to me. I have always liked black hogs the best.

Lynn Patton had a Duroc gilt en-

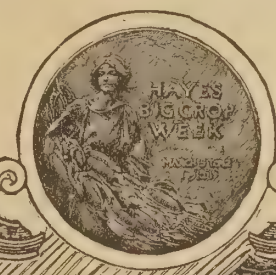
MAHLON BEACHY AND HIS FAVORITE

A Big Yield Guaranteed!

HAYES Big-Crop records extend back over 35 years—among nearly 300,000 users. And everywhere the story is the same. The Hayes Four-Wheel system of Human-Hand Planting positively does *increase* crops.

The first year's increase is usually enough to pay for the Hayes several times over. And these increased yields and profits continue for 18, 20, 25 and even 30 years.



But these amazing records are not your only assurance. This Human-Hand planter is sold with a *Big-Crop Guarantee.* It says that if the Hayes Four-Wheel does not give you a better stand of corn, you may return it and the *full purchase price will be refunded.*

Why gamble with your planting? The Hayes Four-Wheel—the nation's leading corn planter—*guarantees* you an increased crop *beginning next season.* Don't wait. Go to the local dealer and order *now.*

Hayes Pump & Planter Co. Dept. 14, Galva, Ill.

Wanted—Married man for small dairy farm and orchard at Bayfield, Wisconsin. Write J. DAVID SMITH, Albia, Iowa. 4*

Own your own Home

In the newer Northwest States lies the real country of opportunity—the Nation's ZONE OF PLENTY STATES — Minnesota, North Dakota, Montana, Washington and Oregon abound in real opportunities for the small farmer or the large operator. This is a rapidly growing country. You may be sure of fair returns on your labor and investment. Renters of high priced land in the older settled states will find here an opportunity to secure a home.

Minnesota

Farming in Minnesota means good crops and low priced lands. The cut-over lands in Central and Northeastern Minnesota offer great opportunities in diversified farming, grain growing, potatoes and dairying. Clover and cows will support the family while the land is being cleared. The prairie section of the Red River Valley of western Minnesota contains vast areas of rich, black soil where all kinds of grain, corn, alfalfa, clover and live stock are produced successfully.

North Dakota

North Dakota has the largest body of rich, black, low-priced lands in the country. Smooth fields, easily farmed, well adapted to working tractors. Stock growing has opened a new era in North Dakota. Wheat, small grains, alfalfa, red and sweet clover all are money-making crops.

Montana

Montana has millions of acres of grain growing lands at low prices on favorable terms. This state has exceptional stock raising advantages combined with grain farming. Irrigated valleys insure big production. Dairying, diversified farming and fruit growing on cut-over Western Montana land. A substantial start can be made here on small capital.

Washington

Washington and Northern Idaho offer a wide range of farming activities. Good crops of grain, forage, vegetables on low priced land. Also adapted to dairying and mixed farming. Building material and fuel cheap. Water abundant. Climate delightful. Commercial fruit production highly developed under irrigation.

Oregon

Oregon offers vast farming possibilities combined with attractive climate. Low priced irrigated land east of mountains. Diversified farms, west of mountains, produce fruits, berries, mixed crops and dairy products.

Investigate Zone of Plenty States Without Delay

Good farm lands in Illinois, Wisconsin, Iowa, Nebraska, and other Middle Western States have advanced so high in price that today it is practically impossible for a man of small means to get started or the small farmer to insure a home and good income to his family.

To help you to a new home in the land of proved opportunity, the Great Northern Railway maintains an Agricultural Department. Complete information furnished FREE. All you need to do is to ask and details of the Zone of Plenty States will be promptly forwarded without charge. Send for state bulletins.

Low round-trip home-seekers' tickets on sale first and third Tuesday of each month, April to October.

New Champion Jersey for North Carolina

December 13, 1920, Eminent's Nina, a Jersey cow owned by the North Carolina State College, completed her Register of Merit test by producing 15,035.7 lbs. milk, 700.66 lbs. butterfat, and became the champion Jersey cow in milk production in North Carolina. She exceeded by 2,019.2 lbs. of milk the former state record held by the Jersey cow, Fortune's Admiration, owned by Mr. J. F. Diggs.

Eminent's Nina is ten years old and possesses the fine dairy temperament associated with so high a producer. In March, 1920, she produced 1,755 lbs. of milk, an average daily production of 56.6 pounds. For the 182 days from January 1 to August 31 she averaged daily 53.7 lbs. of milk. She is entitled to a Gold Medal awarded by the American Jersey Cattle Club to all cows producing over 700 lbs. butterfat and carrying a calf 155 days during test.

North Carolina. FRED M. HAIG.

Marketing New Zealand Produce

(Continued from page 142)

market value and, at the producer's expense, and they said so pretty plainly at times. At first a butterfat levy was made on cheesemakers and buttermakers alike. This was very strongly objected to; and the government eventually returned the money so collected to the farmers. The next expedient was to subsidize those factories which supplied the local market from the funds of the state.

The parliamentary committee has just reported to the House of Representatives that butter should be retailed in the Dominion at 2-3 (48 cents) per pound for cash and 2-5½ to 2-6 (50 cents) for credit. The producers supplying the local market are to be subsidized out of the consolidated revenue to such an amount as will place them on a parity with exporters at 50 cents per pound. This will cost the country at the rate of £600,000 per annum equivalent to $2,400,000, with $4 equal £1. The answer of the farmer to charges of overreaching in the matter of prices is the ever increasing cost of production and the great enhancement that has taken place in the prices of dairying lands. The inflation of land values, however, has followed the high prices for butterfat and can hardly be fairly given as increased cost of production. However, late comers in the game have had to pay prices for their holdings that must ruin them if the values for butter and cheese fall to anything approaching pre-war levels.

There has been an orgy of land speculation on properties suitable for dairying, and dairy farmers have indulged in it and made huge profits out of it, as well as other people. This has gone on for the past five or six years all over the North Island and in many suitable localities in the South. The banks are now sternly discountenancing this kind of thing and there may be some check upon it in that way; but it is feared the evil has gone too far in the case of many of the younger entrants. Properties carrying seven to nine mortgages are by no means rare. It is disturbing to think of what must follow should there be a serious retrocession of prices for butter and cheese before the "last men in" have had time to turn around.

The Farmer and His Reading

(Continued from page 125)

about it I learned in that way. I had a little book called "Lessons in Astronomy" by Professor Young. I was not able to go much into the mathematics of the subject but I quarried out many facts about the sun, moon, planets, and stars. By means of the star maps in this little book, I picked out most of the well-known constellations and conspicuous stars. It is a satisfaction to understand what causes the phases of the moon, to be able to explain fairly well the "nebular hypothesis". It is a real pleasure to greet Orion as he rises in the eastern sky, to pick out the great equilateral triangle formed by Arturus, Spica, and Denebola, and to see the Great Dipper night after night traveling around the pole-star. It seems a pity for a man whose business compels him to be outdoors at night to go through life not knowing or caring anything about the heavens. Such knowledge may be acquired from a book and is within your reach. It puts interest and beauty into what might otherwise be at times gray, dull, and monotonous.

And astronomy is only one of the sciences that every farmer ought to understand something about. He ought to know all the different kinds of trees, their leaves, bark, wood, habitat, uses. There are the weeds. It makes it pleasanter business to kill weeds if you know what you are killing. My little boys, four and five years old, are already pressing pretty close to my limit on the names of our weeds. There are the wild flowers and tame ones, too. There are the birds and their songs and habits. Does the meadow lark ever cheer you up or have you ever heard its happy notes on a bleak day? There are many questions, interesting and practical, about the ground itself that most of us cannot answer.

Few of us have had our education so well rounded out that we possess all the knowledge about Nature that is worth having. You cannot find these things out from your friends if they know no more than you do.

In your business, in the great life of the world today, in the storehouses of literature and Nature, your reading offers you much. It holds out to you a deeper, richer, fuller life.

The busy world shoves angrily aside the man who stands with arms akimbo set, until occasion tells him what to do; and he who waits to have his task marked out shall die and leave his errand unfulfilled.—James Russell Lowell.

From Our Junior Correspondents

(Continued From page 146)

tered; Clifford and Joe Smerchec, Chester Whites; the Craig boys, Willard Collins, and I had Poland-Chinas. They were all pure-breds.

I like to read the junior letters and sure enjoy the Bob Ramsay—Jimmy Green stories. I was just wondering if there are any juniors from Chickasaw County, Mississippi. I lived there once. I wish some of the juniors would write to me. My address is Garnett, Kansas. Mahlon Beachy.

Hoard's Dairyman Juniors:—I received the fob, button, and creed and I like them very much. This is my second letter to the juniors. I live on a one-hundred-and-sixty-acre farm. We keep eighteen cows and eleven horses. Our cattle are registered Holsteins. I expect to buy a shoat this fall.

I like the stories about Bob Ramsay and Jimmy Greene, but I think that Jimmy hadn't better drink any more moonshine.

Wisconsin. Leslie Gilbert.

Hoard's Dairyman Juniors:—You said you could not guess that riddle I gave you, so I will tell you the answer. (What is the difference between an old dime and a new penny?) Nine cents of course! Here is another one. What is it that a gentleman never has had, never can have, but yet can give to a lady? Try to answer that.

We are going to school now, my three sisters and myself. We take a horse every morning and leave it in town. I take care of it at noon. It is quite dark when we get home so I do my chores after supper. We take hot lunches at school and they help out a great deal. I am studying manual training at school and like it very much. Well, my arm is getting tired so I will close.

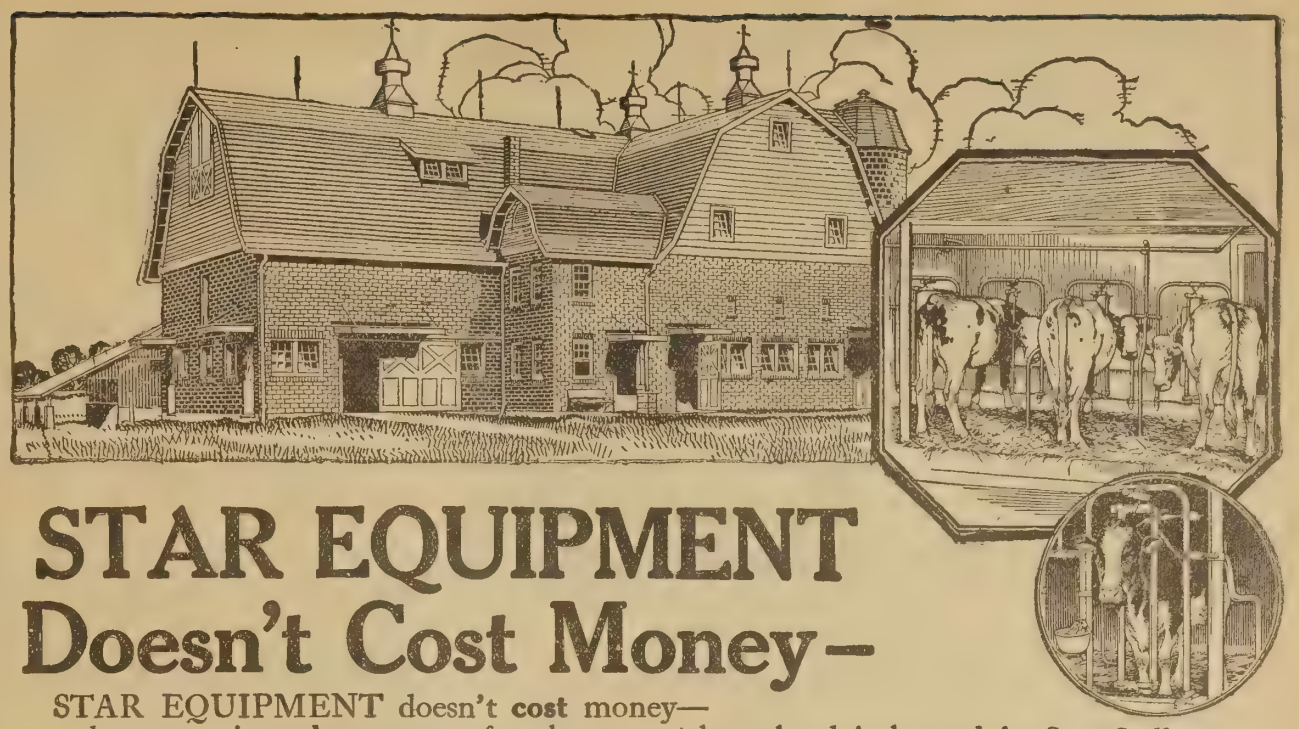
Wisconsin. Ralph Churchill.

Hoard's Dairyman Juniors:—I was more than glad to hear from you, and I do believe that every junior should learn the creed. I am busy going to school now and we just got through our examinations. Our new building will soon be ready for us now. I am the bus driver on our route. The law says that no one can drive a bus until he is 21 years old and I am only 14. But it is impossible to get bus drivers so I have to do it. My father is president of the school board now.

We are milking 19 cows but do not get very much milk at present. That's what I am going to be when I am grown, a dairyman. I have six brothers but I do not know what will become of them. Please tell some of the other juniors to write to me. My address is Melvin, Iowa.

Erwin Kuester.

"The Cow" by a Ten-year-old Junior



The cow stands ready there to give
A stream of snow white milk,
'Tis better far for sick and well
Than pearls or finest silk.

The farmer comes with stool and pail,
To milk the waiting cow.
The pail is full when he is done,
He separates it now.

The cream he sells for yellow gold,
The milk his pigs will drink,
Some cream upon the farmer's food
Is his best pay, I think.

Michigan. FRANCES FRAME.

Uncle Ab says: Some conceited folks he knows can't get over the idea that their sorrows and miseries are the greatest ever experienced by mortal man.

STAR EQUIPMENT Doesn't Cost Money—

STAR EQUIPMENT doesn't **cost** money—
—because—**it makes** money for the man whose herd is housed in Star Stalls.
Healthier cows—cows that give more milk—less work for you and the hired hands to do—don't those things represent more money in your pocket?

Well, that's what the STAR EQUIPPED barn means. Dairymen who have housed herds the old way and the modern way—the STAR way—say that the equipment pays for itself the first year it's in or soon after.

It isn't a question of whether or not you can afford it—the question is can you afford to be **without** it?

1—Star Alignment Device
Instantly lines cow at gutter after she is in stall—keeps stall, bedding and cow clean.

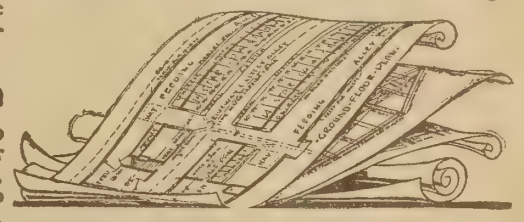
2—StarStanchionAdjustment
Narrows or widens stanchions to exactly fit cow's neck. Safety and comfort.

3—Star Curb Clamp
"Sets a stall in 60 seconds"—permits of concrete work being finished before stalls are set. Cuts time of installation in half.

4—Star Unit System Stall
Each stall assembled before shipment, ready to go in place the moment it arrives.

5—Star Wood Lining
Hard maple lining forced in U bar, anchored so it won't come out.

Soon Pays for Itself



On every item of STAR Equipment, you'll find patented features, exclusive with this line, that mean added convenience, longer life, labor saving and money making.

And there isn't a thing for the barn that isn't in the STAR Catalog in the best form imaginable.

Make Your Barn Modern

The Star Line is not confined to Steel Stalls, Stanchions, Water Bowls, Pens, Ventilation Fixtures, Litter and Feed Carriers, but also embodies Harvester Hay Tools, Cannon Ball Door Hangers, Hoghouse Equipment, Garage Door Fixtures, and all kinds of farm specialties. It takes a 320-page catalog to tell the Star story.

Your name will bring the finest catalog ever issued—a-320 page bound book worth owning for the useful information it contains. The only expense to you is the trouble it takes to write.

Barn Blue Prints Worth $10.00 FREE!

Made Especially for Your Needs

Just specify on the coupon below the number of cows, young stock and horses you want to house and the experts in our Plan Department will send you a practical blue print of elevation, floor plan and outside of a barn especially suited to your requirements. And it doesn't cost you a cent. This is our "get acquainted" offer. Mail this coupon. We'll mail the plans free.

Lyman's GRIMM ALFALFA — The Original and Genuine

Lyman's Genuine Grimm Alfalfa will not thin out or winterkill like ordinary varieties and will grow on any farmable land.
Lyman's Genuine Grimm produces heavier yields of higher feeding value than common alfalfa and grows year after year without replanting.
Lyman's Genuine Grimm is scarified giving it a higher germination. Because of its superior stooling qualities 40% less seed is required.
Why take chances with doubtful seed, get the genuine direct from the man who introduced it. A certificate of genuineness furnished with every order.
Get Mr. Lyman's free booklet "How I discovered Grimm Alfalfa" and free seed sample.

On the Basis of Facts

The life of our country is built around its Public Utilities. Our social, industrial and Government activities could not exist today without the continued operation of their indispensable services.

That such services may be extended and developed to be of the greatest use to the greatest number, the Federal Government and practically all the states have appointed Public Service Commissioners as permanent tribunals to regulate public utilities with fairness to all concerned.

Facts as to the past and studies as to the future, the Bell Companies find are essential to the proper management and development of their business. This information is open to study by these Commissioners and through them by the public generally.

The solution of the problem of building up and maintaining the public utilities, which is of the greatest importance to the people of this country, is assured whenever all the facts are known and given their due weight.

ABORTION IN CATTLE

CAN BE TREATED SUCCESSFULLY AND YOUR COWS MADE PROMPT. REGULAR BREEDERS BY

STERILOID

STOP LOSING CALVES

TREATMENT: If STERILOID is used at the first sign of abortion the cow will go her full time and have a healthy calf. If your cows or heifers do not come in season, or fail to get with calf, use STERILOID. Cows get with calf after only one treatment. Write today for **FREE BOOK.** It explains the causes and symptoms of Abortion and tells how to treat Abortion, and make your cows regular, healthy breeders with STERILOID. Also contains letters from breeders who have used STERILOID successfully.

GUARANTEE: We will refund money in every case when STERILOID FAILS to make good. PRICE $1.00 plus 4o tax. Mailed Postpaid, in plain wrapper.

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Mammary Congestion

It is natural and necessary for the udder to enlarge before calving in preparation for the advent of the calf. Were enlargement not to occur there would be little or no milk for the nourishment of the calf, and the greater the enlargement, if normal, the greater is likely to be the yield of milk, should all go well.

The enlargement referred to is caused by increased flow of blood to the udder and to development of true mammary gland tissue, the function of which is to secrete milk. Such enlargement, therefore, is natural and desirable but occasionally it becomes extreme or excessive and then may be considered abnormal, and in some instances possibly alarming.

When the flow of blood into the udder is beyond the capacity of the mammary veins to remove perfectly, intense engorgement of the tiny blood vessels in the mammary glands and adjacent parts causes serum or plasma of the blood to be forced out. Soon after calving this liquid is utilized to form some 87 per cent of the milk produced. Before that occurs, however, it causes the doughy swellings (edema) of the abdominal wall about the navel, and often running upward between the hind legs.

When these edematous swellings are large and the udder is also immensely distended and "pits" under pressure of the finger, the teats may yield serum, when stripped. In some instances this serum is blood stained, from rupture of some of the minute blood vessels, or pure blood may be present. In cases where great congestion has existed for some time milk may replace serum or blood, as it does when lactation is established after calving.

The condition we have described is not "garget", properly termed *mammitis*, or inflammation of the mammary glands. In that condition *active congestion*, due to engorgement of the arteries, is present and is indicated by heat, redness, and pain, as well as swelling. The enlargement associated with edematous conditions, on the contrary, evidences *passive congestion* in which the veins are engorged with impure venous blood which they cannot perfectly carry away.

Excessive congestion of the udder prior to calving usually is induced by overfeeding, lack of exercise, and consequent constipation. If the udder while in such a condition should be chilled by lying upon a bare concrete floor or cold, wet ground, or is bruised when running, trampling by another cow in the stall, or other cause, mammitis may result. Similar causes of less severity but long continued prior to calving, quite commonly induce mammitis at calving time. Another common, mischievous, but usually unsuspected cause of such attacks of mammitis, and other abnormal conditions of the udder at the birth of a first calf, is sucking of the teats by other calves during calfhood days when the animals are penned together and hand-raised on milk. That always should instantly be stopped when noticed. To prevent excessive congestion of the mammary glands before and at calving time, heifers and cows should be made to take exercise daily and the ration should be light and laxative. Other causes mentioned in the foregoing should be avoided.

Treatment, when necessary, consists in administering a dose of Epsom or Glauber salts, followed by daily doses of saltpeter, together with frequent gentle massage of the udder and swellings and, in some instances, stripping away a little of any fluid present in the udder.

Salt Poisoning

Can you give me a report on the enclosed statement of salt being poisonous to hogs? I had two of my thoroughbred brood sows die lately. The veterinarian said it was the flu, but I keep salt so they can get all they want at any time.

Shabbona Grove, Ill. C. H. L.

The statement referred to is correct as hogs often are poisoned by meat brine or oversalting. It would be quite unusual, however, for hogs to take an injurious amount of salt when allowed to help themselves to it at all times. It is when salt has been withheld for some time and then allowed at will that hogs take poisonous amounts. Or they are poisoned by too much salt being mixed in their feed.

Grease Heel

Some time ago I saw in your paper a remedy for scratches consisting of a solution of (I think) concentrated lye. I have mislaid the paper and forgotten the proportions. As I have a horse that nothing seems to help I would like to know again what that was..

Roulette, Pa. C. S. W.

The treatment was prescribed for "grease heel" not for ordinary "scratches". It is as follows: Dissolve a small can of concentrated lye in 2 quarts of soft water and cork well in a bottle or jug. Twice daily bathe the affected parts with a small

Hood Farm Abortion Remedy
and
Hood Farm Breeding Powder

bucketful of soft water containing 2 ounces of the lye solution. Gradually add more solution if that proves necessary. Let the horse live without grain and run outdoors as much as possible.

Eye Disease

I have a horse which has a scum over the eyes and a hazy looking spot over one of them. Is there a cure for this case?
Hidalgo, Ill. C. C. H.

The horse in all probability is afflicted with periodic ophthalmia (moon blindness) which is incurable and causes cataract and blindness of one or both eyes after repeated attacks. This may be retarded somewhat by slightly darkening the stable and at times of attack covering the eyes with a soft cloth to be kept constantly wet with a saturated solution of boric acid. Also dissolve a dram of iodine of potash in the drinking water night and morning at such times. If a qualified veterinarian can be employed he may try the new plan of injecting Lugol's solution into the tissues above the eyes and also give treatment with a bacterin which is now being experimented with in this disease.

Warbles

I have a fine Holstein heifer with several large lumps on her back. They do not seem to bother her, but she is in poor and thin condition. I believe them to be the larva of the gad fly, and if so is there a remedy for them? Will salting on back be of any benefit?
Union, S. C. H. T. P.

The lumps or boils mentioned no doubt contain grubs (larvae) of the ox warble fly (hypoderma linlatum) and may be removed by slightly enlarging the openings and then squeezing downward with the open mouth of a large bottle. Destroy the grubs after extraction. Sprinkling salt upon the backs of cattle in fall and early winter when presence of the grubs is first noticed, induces cattle to lick one another and that may kill some of the grubs. At least this plan has been recommended by some stock men. Fly repellents should be freely applied by spraying in fly time.

Scours

Please tell me what to do for a sick calf 10 weeks old. We have an old dairyman from Wisconsin who feeds the calves and I did not know there was anything wrong with the calf before today. He is getting thin and scouring.
Mitchell, Ia. N. A. B.

Give the calf a dose of castor oil in milk and after it has operated give it a teaspoonful of a mixture of 1 part of salol and 2 parts of subnitrate of bismuth at intervals of 3 hours. Increase the dose if found necessary. Triple sulpho-carbolate tablets are also useful in such cases. Try them if the other remedy is not quickly effectual.

Suppression of Milk

I have two cows which were dry six or eight weeks. They got, once a day, alfalfa and marsh hay and twice a day silage with ground feed, oats, oil meal, and gluten. The cows bagged up big. They easily would produce between 50 and 60 pounds of milk but instead of that when they came fresh they didn't give anything. One now gives some milk and the other one is commencing to give some. They both were heavy yielders. Kindly advise me what causes that and what a person could do for it.
Burnett, Wis. L. S.

If suppression of milk were due to chill, shock, fright, or some such cause at calving time the cows will be likely to yield a normal amount of milk when they calve again. If it was due to mammitis (garget) it is quite unlikely that they will again milk normally. If that disease is present the udder will have been inflammed and swollen and the milk, such as is yielded, will be changed in appearance and consistency. When the udder develops normally and yet gives no milk at calving time secretion sometimes starts if the cow be given hypodermic doses of strychnin and pilocarpin, or these alkaloids may be given by way of the mouth dissolved in water. As strychnin is a dangerous poison it should be prescribed by a veterinarian and the correct dose of pilocarpin should also be decided by such an expert. In addition to the medicinal treatment an affected cow should be blanketed in a comfortable box stall and be given copious drinks of warm flaxseed tea well sweetened with molasses and sloppy feed such as usually stimulates milk flow.

Western Electric
Power & Light
Makes The Battery Last Longer

More Power to You!

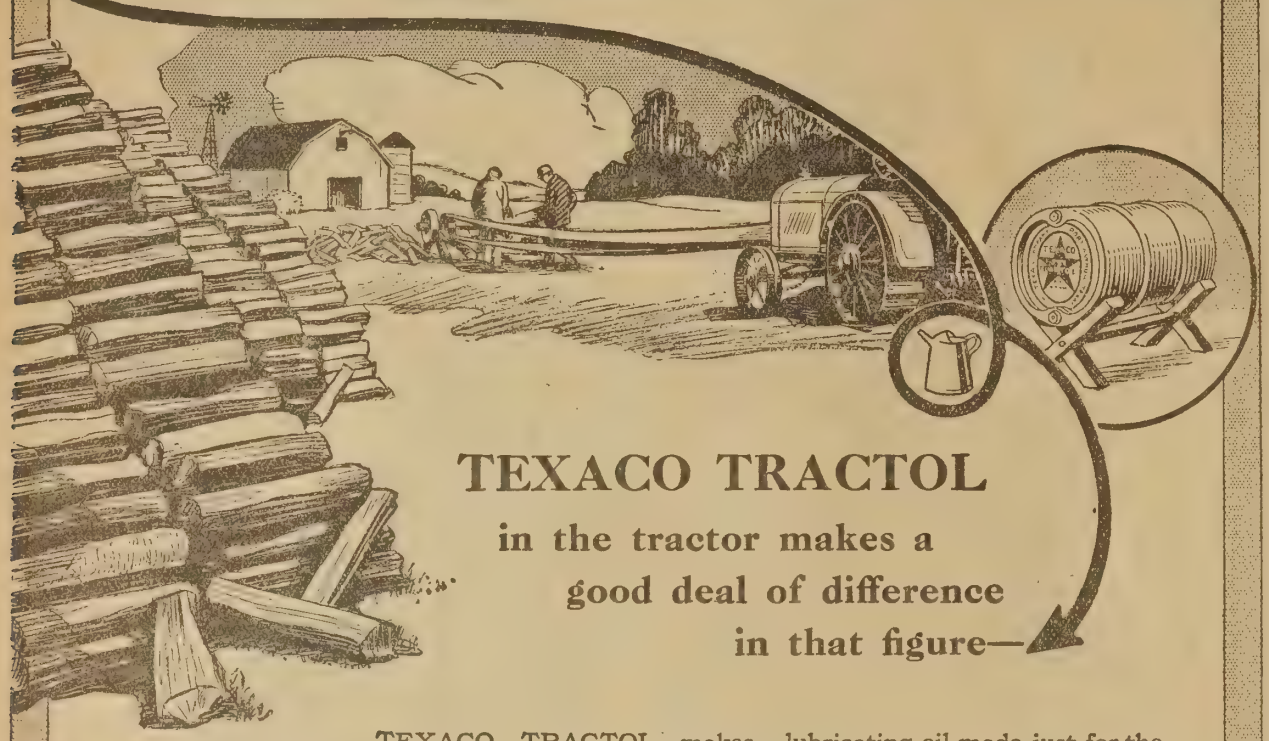
Power enough to run nearly all the machinery you've been turning by hand, power a-plenty to pump water and operate your feed grinder and milking machine—power is what the Western Electric Power and Light Outfit supplies in abundance every minute of the day.

It is the extra-size engine and generator that do it—a combination built to do a man's work, in less time and at a small fraction of the cost.

For further information write for Booklet HD-1, to Western Electric Company, 500 South Clinton Street, Chicago, or 151 Fifth Ave., N. Y. C.

Why you should buy *Western Electric* Power & Light

1. It is an extra powerful Outfit. Plenty of power and light always.
2. It has a pulley that enables you to use your outfit as a powerful engine, either separately or at the same time you charge the battery.
3. All parts are easy to get at.
4. The engine runs on kerosene and is air-cooled.
5. The "tapering charge" makes the battery last longer.



It will pay you to look into these and other important features of this dependable Power and Light Outfit. There is a Western Electric dealer near you. Ask him.

SEED

By Prepaid Express—Order NOW—Prices Going Up. Our first quality, hardy northern-grown grass seed, famous for its frost and drought resisting qualities. High and strong in germination. Our price about two-thirds below last year, but now tending upward. Order EARLY. We pay all express or freight charges; bags free. Specials: Alsike and Timothy mixed $5.85 per bu.; Alfalfa $12.90 bu.; Medium Red Clover $13.50 bu.; Alsike $16 bu.; Timothy $3.95 bu.; Sweet Clover $4.50 bu.; Sudan Grass 8½c per lb. As seedsmen of many years experience we have carefully graded and tested these seeds. We guarantee them to be as represented, or your money back. You must be satisfied. We are not connected or associated with any other house selling direct to farmers. Order TODAY or send name for price list and full particulars. **World Seed Company**, 123 W. Madison St., Dept. How many cords of wood per day?

TEXACO TRACTOL

in the tractor makes a good deal of difference in that figure—

TEXACO Motor Oil

The uniform oil that keeps your motor active. It is a fine lasting oil that completely retains its lubricating properties despite engine heat. It so perfectly seals the clearance between piston and cylinder, that no gasoline can leak into the crank case. Thus full compression is secured, and every last ounce of power used that the gas has to give. Be certain to get the can with the red Star and green T.

TEXACO TRACTOL makes the difference between having *all* the power developed by the engine transmitted to the belt because the bearing surfaces are properly lubricated, and losing a large part of the power transmitted because friction has become so great a factor.

Texaco Tractol is a special lubricating oil made just for the kind of work your tractor does—heavy load, with engine running full speed for long periods at a time.

Texaco Tractol is sold in 33 and 55 gallon steel drums, in wooden barrels and half-barrels, and 5 gallon sealed cans. Your dealer can tell you what grade your tractor needs.

The Biggest Little Book on the Farm

Dairying in Scotland

(Continued from page 127)

market. Generally the animals used are grade Shorthorns or Shorthorn-Ayrshire crosses. They are put into the milking barn and fed heavily so that the maximum yield may be obtained from them and at the same time they may be kept in good condition. Then as soon as their milk flow becomes so low that it is not profitable to milk them, they are removed to a barn, separate from that in which the milking herd is kept, and rapidly finished for the butcher. These might almost be called dual-purpose cattle—they are milked and then slaughtered.

This system of milk production cannot be looked on as high-class dairying though it is of ancient and honorable lineage as the almost prehistoric and absolutely dingy street in Edinburgh called the Cowgate will testify. Boston is not the only town in the planning of which the cow has played an important part. In many of the old towns and villages of Scotland the Cowgate is a familiar street. The name is significant; as it was in some cases the alley in which the cows were kept and in others the route they followed to pasture.

Progressive dairying is most in evidence in the southwest where it forms one of the most important branches of agriculture, though beef and mutton production and horse raising are not neglected. Here a small proportion of the milk is retailed in the towns and some, especially in winter, is shipped to the larger cities lying in other sections. The greater proportion of the product is converted into cheese and butter, the whole milk being sold to the local creameries, where cheese and butter are made, or converted into cheese on the farm. Cheddar cheese manufacture predominates though Dunlop cheese is also popular and the farm-made cheese generally commands a premium on the market as it is of better quality than the factory product.

The dairying of Scotland is founded on the Ayrshire cow as it was her development that made profitable dairying possible. Practically all of the herds in the southwest are pure-bred or grade Ayrshires though Shorthorn-Ayrshire crosses are also found, especially in the herds of the men who have a trade for heifers of this type in the south of England. A few herds of British Friesians, or Holsteins, have also come into this locality in recent years and their future makes a very interesting study as practical men are fairly evenly divided in opinion as to the prospects for their development.

The dairy herds vary considerably in size, the most numerous being those with thirty to fifty head of milking cows, though of course smaller herds and others running up to 120 or even 150 head also occur. When considering the size of these herds it should be remembered that they are practically all owned by tenant farmers and not by the large landowners—the landowners would often be in better circumstances if they owned fewer acres and more cows.

Farm Practice

With a moist climate and no extremes of temperature the Scottish pastures are luxuriant and this renders the cheapest milk production possible in summer. Consequently some of their practices vary greatly from the best principles in this country. As a general rule, except where a city milk trade is catered to, the cows are allowed to freshen about February or March and are fed roots, chiefly rutabagas and mangels, with some grain until the pastures are good

in April or May. The main grains fed are ground oats, corn meal, bean meal, soybean meal, and cottonseed cake. The oats and part of the bean meal are home products while the others are all imported.

When the cows are put to pasture no grain is fed as a general rule until late in summer when it is common to use cottonseed cake as a supplement. Turnips and cabbages are also frequently supplied in the fall. Not only is the best yield obtained on pasture but the cheese produced then is also of better quality than winter cheese.

In the fall the cows are dried up and given a rest of two to three months and fed on oat straw and roots with a little grain where it is necessary to get the animals in good condition. The use of oat straw as the sole dry roughage in winter may seem peculiar but owing to the fact that the oat crop ripens more slowly in Scotland than it does here and is cut rather earlier, it is of greater value for feeding purposes and it fits in admirably with the roots. The root feeding is generally heavy, averaging 50 to 60 pounds, and in some cases 100 pounds per cow daily. On some farms where only a limited amount of cropping is done, mixed clover and rye-grass hay or meadow hay is fed in place of oat straw and fewer roots are used.

The producing herds are in the barns at milking time only during the summer and in winter they are turned out to the pastures for a few hours daily except in stormy weather. As a general rule young stock are never housed from weaning time until they are brought in to be prepared for their first freshening. Although the majority of the herd is allowed to freshen in spring, heifers are frequently bred to freshen in the fall and milked through the winter and following summer as it is believed that this lengthened milking period tends to develop the latent capacity for production to its fullest extent.

Prospects

Dairying has always been one of the best branches of farming in Scotland as there is a large demand for raw milk from the cities which cannot be interfered with by foreign competition. The cheesemaker, like the grower of beef and mutton, has sometimes had his profits reduced by the overstocking of the markets with foreign products, but present conditions are such that the prospects for all branches of dairying are bright.

Good grade dairy cows which were worth $60 to $75 a few years ago are now in brisk demand and bringing $200 to $300 and though the cost of labor and feeding stuffs has gone up, the increased price for dairy products, especially cheese, is leaving a safe margin to the farmer.

The home herds cannot supply all the dairy products needed by the dense population, as was clearly shown during the war when the people suffered for lack of them, and, now that the importance of dairying as a national asset is being realized, the man with a herd of good cows has nothing to fear. The amount of imported products on the market will again increase but the provision of milk for immediate consumption and a high quality of cheese will ensure a fair profit to the Scottish dairy farmer.

Cowpeas for Pasturing

It is not considered the best farm practice to use cowpeas strictly as pasture, but under certain conditions it is advisable and profitable, say the authors of Farmers' Bulletin 1153, Cowpeas: Utilization, which may be secured from the U. S. Department of Agriculture, Washington, D. C. Cowpeas furnish a pasture crop during a period of the year when such forage can be used to the best advantage. The small amount of work and the small cash outlay always associated with the grazing of stock commends the practice to the average farmer, and scarcity of labor often makes it necessary to pasture a crop whenever possible. Another advantage in pasturing cowpeas is that not only is the soil benefited, but the waste vines and animal droppings are also left on the land. The soil, after cowpeas have been pastured, is in an excellent condition of productivity for the fall sowing of wheat.

It's mighty difficult to get too much milk in the daily deit. Milk is a liquid, but it comes close to being a perfect food.

The Healthy Cow, the Hungry Cow is the Business Cow

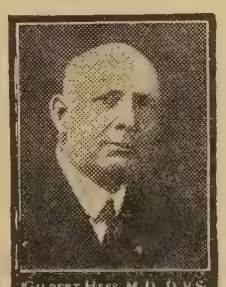
She's the cow that will convert her feed of grain and fodder into pails of milk.

Remember, the better the appetite, the greater the food consumption, the greater the milk production. Hence, good health, a strong appetite and good digestion are the absolute essentials of a big milker.

Dr. Hess Stock Tonic

Keeps cows healthy. It makes cows hungry.

It contains Nux Vomica, that greatest of all nerve tonics. It whets the appetite, brightens the eye, invigorates the system. It contains Quassia, that bitter Stomachic tonic that produces appetite. It contains Iron that helps to replenish rich red blood, so essential to a cow in milk.



Lastly, but just as important is it—it contains Laxatives and Diuretics that cause the kidneys to filtrate and the bowels to operate regularly, so as to throw off and carry off the waste material. There is no clogging of the system where Dr. Hess Stock Tonic is fed.

Good alike for cattle, horses, hogs and sheep. It keeps animals healthy, the whole herd thrifty. It expels worms. Always condition your cows for calving with a course of Dr. Hess Stock Tonic before freshing.

Dr. Hess Stock Tonic is compounded strictly on scientific lines. You buy it according to the size of your herd. Tell your dealer how many cows you have. He has a package to suit. We guarantee good results in the milk pail.

25 lb. Pail, $2.50 **100 lb. Drum, $8.50**

Except in the far West, South and Canada. Smaller packages in proportion.

This fine JERSEY, at 9 yrs. 8 mos., gave 16,238 lbs. milk in one year. Records like that are worth trying for.

There's more to milk-production than just good feeding

MILK-PRODUCTION records do not happen by chance. Neither are they the result of good feeding alone. Fact is, the very process of "forcing" a cow to maximum milk-giving is full of grave dangers to her health unless the milk-making organs are assisted in the rebuilding process.

The recognition of this fact by scientific dairymen is in large measure the reason for the extensive use of Kow-Kare. While primarily a medicine for treating sick cows, the recognized tonic and strengthening effect of Kow-Kare on the organs of production have caused it to be widely used as a preventive of disorders such as are common to cows. Every cent thus spent in assisting Nature will return dollars in increased milk yield alone—to say nothing of avoiding expensive losses through sickness.

When disorders do arise—such as Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite, Bunches, you'll find Kow-Kare a reliable, prompt remedy. Its action on the digestive and genital organs is restorative and strengthening. Such diseases disappear when these organs are strong.

Whether you have sick cows or not you can increase your milk income by the proper use of Kow-Kare—if only as a preventive of trouble.

The expense is slight. Kow-Kare is sold by feed dealers, general stores and druggists; 70c and $1.40 packages.

Write us for our valuable free book, "The Home Cow Doctor."

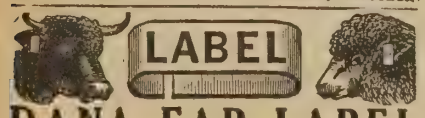
DAIRY ASSOCIATION COMPANY, Lyndonville, Vt

NOTE: The trade-mark name has been changed from KOW-KURE to KOW-KARE—a name more expressive of both the PREVENTIVE and CURATIVE qualities of the remedy. There is not the slightest change in formula or manufacture.

Cow Waters Herself

with this wonderful new Libbey Automatic Water Bowl. Animal moves lever, opening water valve, when it starts to drink. Lever swings back, closing valve, when animal stops drinking.

15% More Milk



Milk is 87% water, and cows cannot give their greatest yield unless they have plenty of water constantly within reach. Farmers who use Libbey Bowls report an increase of 15% to 20%, which soon pays for the bowls.

Libbey Automatic Water Bowls

are the most sanitary and successful ever invented. Each bowl controls its own water supply, operated entirely by cow, and may be put at different heights, or in any stall or pen. No float tank required. Cannot overflow; cannot get out of order. Almost no water left in bowl to become stagnant. They save labor and feed and increase milk. Prevent spread of contagious diseases, as each cow has her own bowl and no water can pass from one to another, as with old-style bowls. Very simple and easy to install. Write for circular and prices, also FREE DAILY MILK AND FEED RECORD.

If interested in Stanchions, Stalls, Carriers, etc., ask for free General Catalog.

An Oregon Community Progresses by Organizing

HOARD'S DAIRYMAN:—Community breeding of dairy animals was decided upon in Alsea, in Benton County, Oregon, last spring when the community program of the farm bureau was developed. As a result forty-six registered Jersey females were taken into the community during the year and also six registered bulls. In addition, two bulls were brought to the community for a Jersey bull club which was organized among the farmers who kept but a few cows. Several of the Jerseys were placed on official test, the first cows in Alsea to be tested. A cow testing association with a membership of sixty-seven farmers owning 477 cows was also organized and four new silos were constructed by dairymen.

This progress along dairy lines was a part of the community farm bureau program. There were other important features included in the program which were carried out with equal success and as a result not only is the community consciousness of Alsea quickened, but marked progress of direct economic value has been made.

The program was carried out to a much greater degree than the most optimistic farmer anticipated. Nearly twice as much work as was originally slated was completed by June and more work was outlined. Indications that this might be the case were evident when the farm bureau membership list was checked over and it was found that there were a few more farm bureau members than there were farmers in the Alsea community. The following accomplishments were attained in addition to the work along dairy lines: Seven hundred and twenty pounds of tested seed corn and fifty pounds of sunflower seed were distributed. The Alsea Fruit Growers' Association was organized and six additional acres of berries were set out. More than 600 moles have been trapped and rodent poison has been distributed by nearly all the farmers. A tract of land bordering the Alsea river was purchased and developed as a community park and free automobile camp ground. The Alsea community entertained the County Farm Bureau on the occasion of its annual picnic. A chautauqua was held in July and a community fair was held in September. The children in the Alsea schools were weighed and measured and the home demonstration agent gave suggestions regarding diet to insure better physical condition. A teacher of agriculture was secured for the Alsea schools.

This program is fundamental in its value to the community. All of the projects included in it helped to make Alsea a better agricultural district. Its development was the aftermath of a three-day extension school held last January. The attendance increased each day and on the last afternoon the majority of the people in the valley were present. At the last session of the school the Alsea situation was analyzed and the above program was the result. In discussing the Alsea accomplishments, County Agent Geo. W. Kable expresses himself as follows:

"One hundred twenty-two farmers did not join the farm bureau just because they had an opportunity to do so. Those forty-six registered Jersey cows were not taken into the valley just because the county agent said it was a good thing to do. There was motive power some place to develop and put the Alsea program across.

"The Alsea community was not greatly different from other communities in the county. It had about the same kind of people and similar farms. It had the same doubting Thomases and about the same number of barley beards in the community shirt. A year ago it was very much like any other community in the county.

"The secret of Alsea's success is simple. A few men and women had a conception of Alsea as it might be. This conception was embodied in the community program. Then, instead of saying, 'Let George do it', a 'few of the few' buckled down and said, 'If that program is a good thing for Alsea, we will devote enough of our time and energy and money to see it through'. The brunt of the whole program has fallen on a group of public spirited, live wires who have the vision. It always does. Much of the credit for the Alsea program is due to Ray L. Jenkins, chairman of the community council."

Oregon. F. L. BALLARD.

Cheese Markets Inactive With Firm Tone Lacking

[Report by U. S. Bureau of Markets.]

Demand for cheese was less active during the week ending January 29, and markets were for the most part quiet and inactive. Some improvement in trading developed at primary markets toward the close of the week, but on the whole the firm feeling which had prevailed generally throughout January disappeared and markets could be termed little more than steady. Consumptive demand has fallen off and buyers are again taking goods little in excess of immediate demands.

Fancy held cheese is becoming scarce and owners are in many cases holding for an advance in spite of a desire to move some portion of their stocks. There is more pressure to sell medium grades of summer and fall cheese as well as last year's stuff, and the lower prices offered have attracted some trade to this class of goods.

Price Tendency Downward

Prices in general have not shown any radical changes during the past three weeks. Early in the month trading became active and prices made a jump of about 2c. Some styles, notably Longhorns and Young Americas which were temporarily scarce and got somewhat out of line, have suffered declines but this is as much in the nature of an adjustment as anything else. The price tendency at present seems to be downward.

The average wholesale prices on American cheese (style Twins) for the week ending January 29, 1921, and for the corresponding week last year, were as follows:

	Week ending Jan. 29 1921	1920
	cents	cents
New York	27.7	31.5
Chicago	24.5	30.2
Boston	25.0	32.5
San Francisco	23.2	27.7
Wisconsin	24.4	30.5

The total receipts of American cheese at these markets were 2,605,828 lbs. as compared with 2,562,068 lbs. for the corresponding week a year ago and 2,863,923 lbs. for last week.

An ounce of prevention is still worth more than the proverbial pound of cure. Wholesome, hygienic living amidst clean, sanitary surroundings is one of the simplest ways of protecting health.

Foreign Butter Competes With Minnesota Product

Butter from Denmark and New Zealand is winning favor in New York and other eastern cities and is therefore coming into competition with the best grades of Minnesota butter. Butter from Canada and South American countries is being imported on a rather large scale and is competing strongly with our second grade product.

These are some of the findings reported by A. J. McGuire, dairy specialist with the agricultural extension division of the University of Minnesota, who has been studying butter markets in New York and Chicago. "If Minnesota co-operative creameries are to hold their eastern markets," he says, "they must make more butter scoring over 92 and less butter scoring under that mark. Minnesota makes the best butter in the world, but unfortunately only one-third of our butter is of the best grade. There are three things we ought to begin to do at once:

"First, we must bring all our butter up to the standard.

"Second, we must make all our butter uniform in color, salt, and texture. All the Danish butter is as uniform in characteristics as though it had been made by one man.

"Third, we must establish our own selling agencies and ship in carload lots. The butter should be graded here in Minnesota and shipped out under one sales management.

"I believe that the grading of cream and proper pasteurizing of all cream made into butter should be made compulsory by law in Minnesota. Co-operative creamery companies should take action on this matter at once."

Uncle Ab says: He doesn't mind the wrinkles on his face, but he doesn't want any in his heart.

Winner of Kildee Cup Tells How Success was Won

F. L. CLARK, IOWA

FROM Edward Geraghty of Iowa, one of the three sons of John Geraghty, who with their father won the Kildee Cup this year as having the highest producing grade herd in Iowa cow testing associations, the following statement has been obtained concerning their success:

"We joined the McGregor Cow Testing Association when it was organized in May, 1918. We had fifteen grade Jersey cows. We knew they were pretty good cows but did not know how good until we put them on test. They showed up pretty well from the first in comparison with other herds in the association and we did not weed out any.

"The cow tester talked feeding to us from the very first but we did not do much the first year. We were afraid if we bought concentrates and fed our cows heavily, the feed costs would run up so we wouldn't make any more or at least not enough more to make it pay.

"Beginning with the second year, we divided to give feeding a trial. In the first place at the cow tester's suggestion we kept the cows off the pastures considerably later in the spring. The grass was good when we finally turned them in. In the fall we took them off the pastures earlier than usual. On the whole, we cut the pasture season from about six and a half months, down to five months, feeding more silage.

"The only grain feed we had given the first year consisted of an average of 495 pounds of ground oats for each cow. We changed from the ground oats alone to bran, corn and cob meal, and ground oats. About 1,100 pounds of this ration was fed each cow during the year and in addition about 220 pounds of cottonseed meal.

"We fed according to production, the year's portion of cottonseed meal varying in the herd from 201 pounds for the lowest producing cow to 235 for the highest, and the grain feed ranging from 1,088 pounds to 1,379 pounds. Only clover hay was fed and ess of that than the first year, a standard amount of 1,570 pounds being fed each cow. The first year the hay fed had run from 1,637 pounds a cow to 2,497 pounds. Five thousand, seven hundred ninety-six pounds of silage was fed to a cow the second year as compared with 4,850 pounds the first year.

BARNS AND SILO ON GERAGHTY FARM, WHERE THE HIGHEST PRODUCING HERD IN IOWA COW TESTING ASSOCIATIONS IS KEPT

"The cost of feed the first year ranged from $49.76 to $56.86 a cow. The cost of feed the second year ran from $81.15 to $88.32 a cow, showing it had cost about $30 more a cow.

"The profit above feed cost the first year ranged from $102.66 to $150.44. The profits the second year above feed cost had increased per cow an average of about $90. In other words, by spending $30 more for feed for each cow we had made the cows earn us $90 more apiece.

"As our cows are freshening this winter we are feeding them up to production and hope to maintain a higher average production this year than last. So far we have beaten each month's record of last year."

Take Good Care of the Tractor

The farmer who takes proper care of his machinery gets the biggest returns on his investment. Five rules on the care of the tractor in winter are presented by J. L. Larson of University Farm, Minnesota, assistant instructor in farm motors:

Clean the tractor thoroughly, using kerosene and a brush where necessary.

Put about an oil-can full of oil in cooling systems before draining water. Then be absolutely certain the cooling system is entirely drained so that no water remains to freeze and burst water jackets of motor or pump. Drain out fuel tank, carburetor, and entire fuel system.

After motor is cold, pour about a pint of heavy oil into each cylinder and spin motor a few times to distribute oil thoroughly. Inspect all motor bearings and coat with oil if not oily. Are bearings loose?

All interior surfaces that are finished or moving parts should be covered with a coat of heavy oil.

See that magneto is well covered with oiled paper or protected from moisture. If tractor cannot be placed in a good shed, cover with canvas or anything else that will protect it from the elements.

"Now is the time to remember that leakly radiator, motor knock, those broken bolts and the gear that needed replacement," says Mr. Larson. "Make a list of all the extras you need and order them. Also make a notation of other repair work needed on tractor. There will be sufficient time to do this before the spring work starts."

John Burroughs says: "The best and most hopeful feature in any people is undoubtedly the instinct that leads them to the country to take root there, and not that which sends them flocking to the town and its distractions. The lighter the snow, the more it drifts; and the more frivolous the people, the more they are blown by one wind or another into towns and cities."

JERSEYS

If You Buy a Jersey Bull

From Hood Farm

You buy size, constitution, type and inherited dairy production of the very highest quality. Our Sophie Tormentor Jerseys are large and are the kind that pay $ $ $ $ at the pail.
Bulls and bull calves for sale, pedigree and description on request.

HOOD FARMS, Inc.
Lowell - - Mass.

N. B. We are trying to supply bulls with the size and breeding to produce $ $ $ for the dairymen. It will save time and correspondence if intending purchasers will tell us about their herd and about the price they want to pay.
JIMMY DODGE, Mgr.

For Better Jerseys

We do not retain in our herd any cow which under favorable conditions will not produce 500 lbs. of butterfat (600 lbs. butter) in 1 yr. on official test.

We have a few young bulls for sale.

THORNBURY FARM
LIBERTYVILLE, ILLINOIS
W. A. BREWERTON, Owner L. A. BENT, Mgr.

MILK 10509 Lbs. FAT 586 Lbs.
Average of 175 R. of M. records made by Ayredale cows. Forty R. of M. records made in 1920 by 16 two-year-olds, 4 three-year-olds, 1 four-year-old and 19 mature cows average 10,596 lbs. milk, 586 lbs. fat. With 16 two-year-olds bred at Ayredale in the 1920 lot, they equal previous records made largely by mature cows.
This 1920 performance is pleasing, because it proves our herd sires are breeding on and up.
Bulls and bull calves from above cows for sale. They insure big cows that are big profitable producers. To save correspondence, I would appreciate an inquiry from you giving age, color and priced bull you wish to purchase.

ANTON'S PASHA OF PROSPECT (61884)
Dropped October 31, 1919

SIRE—Anton's King Confidence (43517)...DAM—Buttermaker of Prospect (68769)

Anton's Pasha is one of the "big type" bulls. His picture gives a good idea of his length and the rest of his body is in good proportion.

He is sired by Anton's King Confidence, who has six May Rose crosses. The dam of A. K. C. made 764.65 lbs. of fat as a junior 4-year-old.

The dam of Anton's Pasha is now on test and has made 295.87 lbs. of fat in 243 days, while running with the herd, receiving the regular herd rations and being milked but twice a day.

This bull will go mighty soon so if you want him write immediately.

King Pietertje Ormsby Piebe 25th Is For Sale

He's a show calf like the rest of the sons and daughters of K. P. O. P. You saw them win last fall at the big shows.

His sire is King Pietertje Ormsby Piebe, the best long distance bred bull in the country as well as a sire of show winners.

His dam, Lady Mutual Sadie, is now making a splendid yearly record as a first calf heifer. Shes' a daughter of King Mutual Korndyke, a son of the world record 2-year-old Finderne Mutual Fayne.

This is a chance to buy a son of K. P. O. P. that is sure to increase in value as his dam develops in our herd.

He is priced right and we offer easy terms of payment.

This Splendid Son of Sir P. O. M. 41st

For Sale—Ready For Service

Born January 22, 1920

He is an outstanding individual, straight as a line and of unusual quality

HIS SIRE

Sir Pietertje Ormsby Mercedes 41st is destined to become one of the world's greatest sires. His sire is known as "The World's Greatest Sire of Show Ring Winners and Yearly Producers." His dam is the only 1,000-lb. cow in the world having three daughters above 1,000 lbs. or six averaging 995 lbs. No sire in the world equals him in point of proven transmitting ability in both sire and dam—and "41st" is proving it by handing it down to his offspring. The greatest show cow out this past year was one of his daughters. His first daughter to complete a yearly record is finishing with over 1,100 lbs. as a junior four-year-old.

HIS DAM

Edenvale Bessie Homestead, a grand individual with a record of 28.75 lbs. butter and 622.3 lbs. milk. Her dam is a three-fourths sister to Jessie Fobes Bessie Homestead, former world's champion 4-year-old with 34.96 lbs. in 7 days. Her sire is by the noted show bull, Sir Beets Cornucopia Netherland and from a 29-lb. cow. Mooie Mutual De Kol, Homestead Junior De Kol and De Kol 2d's Paul De Kol No. 2—all close up in the pedigree.

Send for pedigree and further information

4 Holstein Bulls for Sale

All by King Segis Pontiac Cor-Will, 190512, whose sire is King Segis Pontiac, 44444, and whose dam is an A. R. O. daughter of Pontiac Korndyke. Also two fine young registered cows, one a granddaughter of Pontiac Korndyke. **Wm. N. Osborn, Wanatah, Ind.**

...ing a mechanical milker, father had to be convinced by actual results. For thirty-five years he had bred and developed the black ... until our herd was among the best in this section. But the Perfection Way won every cow from the start." —LEE M. BRAY.

Why Milk By Hand?

ARE you milking by the old hand method? If you are we want you to visit a Perfection owner and see his Perfection milk. Better than that, try one on your own farm. After seeing the Perfection in action you'll give up hand milking.

Notice the remarkable saving in time and work. One man and a Perfection replaces three hand milkers. This means enough saving in wages of hired help to pay for a Perfection in less than a year.

Watch how your cows take to the action of the Perfection teat cup. Put your finger in the teat cup and feel that gentle suction followed by a downward squeeze and then a period of rest.

That action explains why thousands of dairy farmers have given up hand milking for the Perfection. It's a perfect copy of the calf's milking.

Owners say that the Perfection wins their cows from the start. They say their cows give more milk to its uniform action.

How You Can See the Perfection

Write and we will send the names and addresses of Perfection owners near you. At the same time we will send you a free copy of "What the Dairyman Wants to Know." Why Milk By Hand? Cows prefer Perfection.

"It takes seven years to make a good saw-maker"

And more than eighty years have made the present quality of Disston Saws.

There is something more in Disston Saws than their ability to make fast, clean cuts; to stay sharp and set a reasonable time; and the fact that they cost a fair price and last for many years.

It is a *character* or personality that makes men write letters to us which reveal real affection for their Disston Saws. This character is difficult to express in words, but every workman who uses Disston Saws—every lover of good tools—knows what we mean. It is similar to honesty and friendship in men.

Disston workmanship and Disston-Made Steel—the qualities of both resulting from generations of experience—produce "the saw most carpenters use" and every saw, tool, and file in the Disston list.

HENRY DISSTON & SONS, INC.
Philadelphia, U. S. A.

A List of What Disston Makes

And in these Saws, Tools and Files is that quality found in

"The Saw Most Carpenters Use"

Back Saws
Band Saws for Wood and Metal
Bevels

Buck Saws
Butcher Saws and Blades
Circular Saws for Wood, Metal, and Slate
Compass Saws
Cross-cut Saws and Tools
Cylinder Saws

Drag Saw Blades
Files and Rasps
Grooving Saws
Gauges—Carpenters' Marking, etc.
Hack Saw Blades
Hack Saw Frames
Hand, Panel, and Rip Saws
Hedge Shears

Ice Saws
Inserted Tooth Circular Saws
Keyhole Saws
Kitchen Saws
Knives—Cane, Corn, Hedge
Knives—Circular—for Cork, Cloth, Leather, Paper, etc.
Knives—Machine
Levels—Carpenters' and Masons'
Machetes
Mandrels

Milling Saws for Metal
Mitre-box Saws
Mitre Rods
One-man Cross-cut Saws
Plumbs and Levels
Plumbers' Saws
Pruning Saws
Re-saws
Saw Clamps and Filing Guides

Saw Gummers
Saw-sets
Saw Screws

SAWS TOOLS FILES

Action or Reaction

A private soldier, mustered out at the close of the Civil War, became in turn a farm hand, a tenant, a farmer of his own land, a recognized authority on farm management and farm markets, and finally Governor of a great state in the Central West.

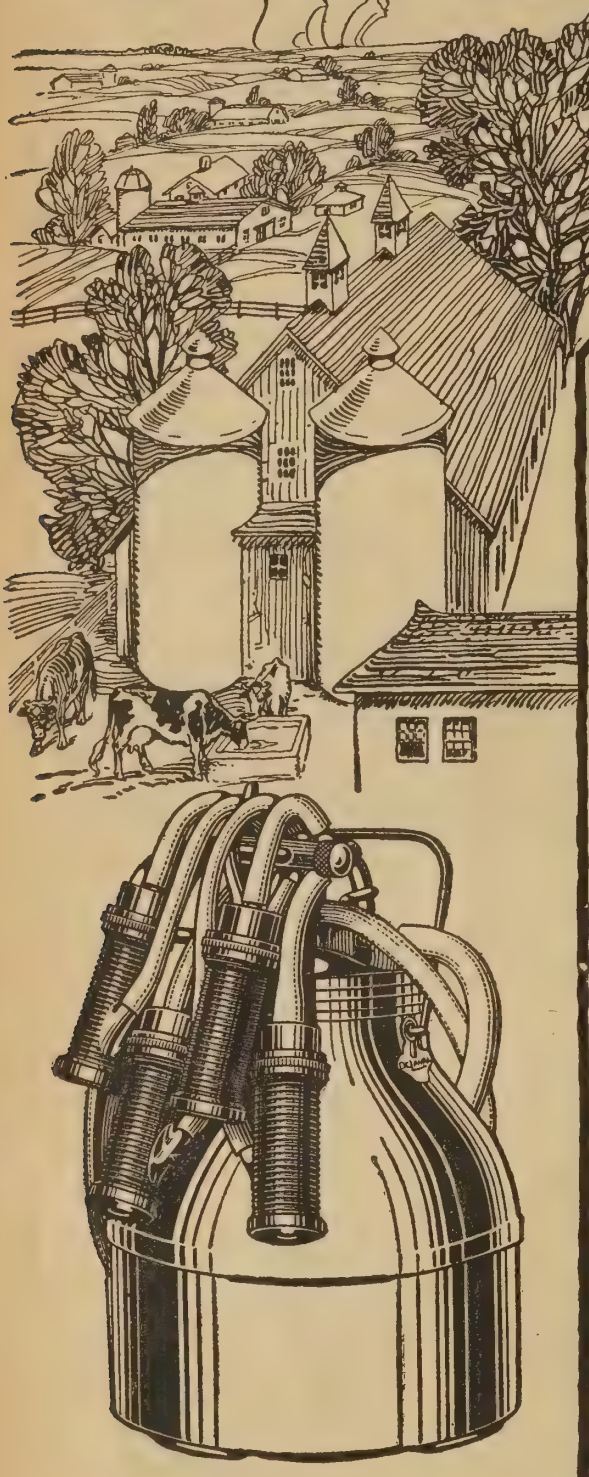
He followed always one fixed principle. He held that the time to expand activities in any direction was when others were beginning to reduce or abandon their interest in that line. He began when others quit.

As long as he lived he put his theory to the test on his own farms and his remarkable success proved its correctness.

Today many farmers are uneasy and are said to be considering giving up the use of commercial fertilizers.

For five years conditions beyond their control have brought about high fertilizer prices and made it necessary to accept fertilizers radically different in composition from those formerly in use.

Is the solution of the trouble to be found in giving up the use of things that have proved profitable in the past or in a careful consideration of the question of the purchase of fertilizers that will be as good as, or better than those formerly used?



There has been a period of *Potash Starvation.* Now all fertilizer materials are obtainable. Fertilizers high in Potash, 5 to 10 per cent, can be made and if you will insist on buying them you will find that

Potash Pays

A Better Way of Milking

The De Laval Milker

THE FUTURE of the dairy business is dependent on a better way of milking. Think of the loss in time and loss in production of milking the twenty-five million cows of the United States and Canada twice a day by hand. No other industry of equal importance is laboring under such a handicap, and every year it is becoming increasingly difficult to secure good hand milkers.

The De Laval Milker is the greatest aid to one of the nation's greatest industries. It is a better way of milking. Better because it saves time. Better because it milks the cows with absolute uniformity from day to day, which De Laval users claim actually increases the flow of milk even over good hand milking. Better because it is easy to keep clean. Better because it is built to De Laval standards. And better because it is backed by De Laval service.

The De Laval Milker is ready to serve and save for you now—write for full information

The De Laval Separator Company

THE FATS FIGHT

Farmers Must Foot the Bill

HOWARD JONES, WISCONSIN

VEGETABLE fats are making a deadly attack on butterfat. What the vegetable fats have already done to the price of butterfat is a mere curtain raiser, unless—but that is getting ahead of the story.

During the war and since, fats from the Orient and the Tropics have been dumped into the United States. However, the slaughter of European dairy cattle and the strong demand for condensed milk and cheese for export kept up the price of butterfat for the time being, so that we dairy farmers did not sense what was going on right under our very noses. But now Europe is dead broke and cannot buy even at a low price. So we are largely shut up to the home market and, alas, we find that the vegetable fats are strongly entrenched here. Condenseries have shut down, butter and cheese have hit the toboggan. Worse yet—the use of butter substitutes has become eminently respectable, for during the war the use of "substitutes" of all sorts was preached as a patriotic duty. A prosperous man who would be ashamed to be caught wearing a paper collar, or brass jewelry, or any other sham, was proud of having counterfeit butter on his table, for was he not "beating the high cost of living and helping win the war?"

Vegetable Fat Dealers Make Hay

Vegetable fat dealers seized this chance to make hay while the sun shone and put on a tremendous advertising campaign, pushing many margarines, lard substitutes, and cooking and salad oils. We farmers "fell for it". With the wisdom of ostriches, we ate our competitor's goods, ham-stringing our own market. If ever there was a case of "sawing off the limb one was roosting on", we dairymen did it. One would have to hunt with a fine tooth comb, even in Wisconsin, queen among the dairy states, for a country general store that does not keep butter and lard substitutes for sale to farmers. Today there is as much substitute lard eaten (cottonseed oil, cocoanut oil, soy bean oil, etc.) as real lard, and one quarter as much substitute butter eaten as real butter. Don't forget the cheaper fat makes the price.

Germany for Vegetable Fats

Before the war Germany took the lead in the vegetable fats trade. German ships scoured the Orient and the Tropics for cheap fats. German chemists led in utilizing them for cheap food, but the war drove German ships off the sea. Our Pacific ports were just the place to lump these oriental vegetable fats. Importations increased greatly. Industrial chemists, in the employ of packers, makers of soaps, toilet supplies, paints, varnishes, etc., are always looking for new sources of fat, and are perfecting the processes of extraction, the best grades of oil selling for food. For example, only a few years ago cotton seed was a worthless by-product. In 1919 we used in the United States 1,302,196,000 pounds. Our good pal, "Old Bossie", must look out for her job. Just now peanuts are trumps, for a ton yields 600 pounds of oil, to say nothing of 1,200 pounds of oil cake. Let us fight squarely; peanut oil and peanut butter are good wholesome foods, we admit it, but we can prove conclusively that butterfat is a heap better.

Every slice of bread and every biscuit buttered with a vegetable fat will not be buttered with real butter. Thus the very ground is being cut from under our feet. Possibly when we dairymen tumble into the hole the vegetable fat crowd is digging for us with a steam shovel working over time, we will take another "tumble", to the fact that a vast advertising campaign is on, costing millions, to break down the age-long custom of eating real butter on our bread and frying our doughnuts in real lard.

Our Friends are Mislead

Aside from the strict vegetarians, who make it a religion to preach against eating animal foods, there are multitudes who really do believe that "pure vegetable oils" are somehow cleaner and more digestible than animal fats. Therefore, in all their cooking they use only oils. This "purity" fake is featured in this advertising campaign by the makers of margarines, soaps, toilet creams, cooking and salad oils, thus indirectly but really slurring butterfat.

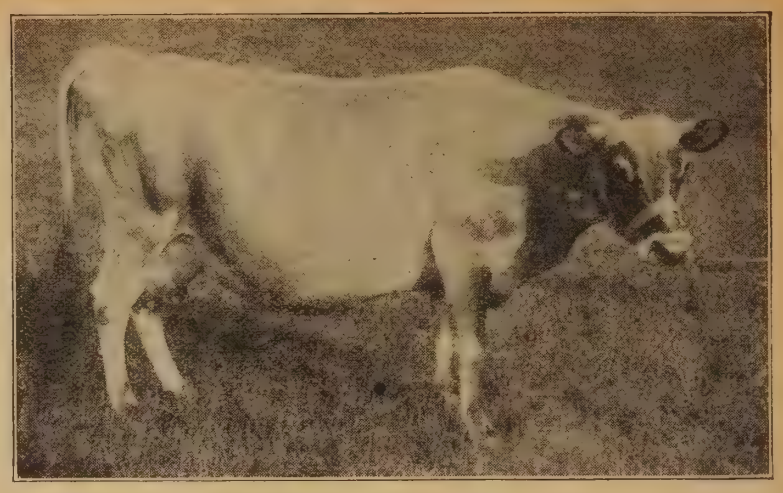
Under the plea of patriotism, a masterly campaign was put on during the war, popularizing "substitutes", and speeding up the new discovery, "the same food value at less cost". This changed attitude of mind in the public has been a godsend to our competitors. Is it too late to turn the tide? Are we already too "groggy" to sense who it is that is hammering us on the solar plexus for the final "knockout"? No! It is not too late. Science is on our side. Common sense, based on experience old as the human race, knows that milk and its products are the very best foods for these supremely important things, namely, growth and health. Very recently science has further analyzed milk, and found and named those growth elements, calling them vitamines. Furthermore, science has shown that while vegetable fats are wholesome food, they do not contain vitamines, the elements so essential to growth in the young and the restoration of adults who are run down in health. Many feeding experiments on rats, pups, guinea pigs, yes, on children also, have proven conclusively that the vegetable fats fail miserably in comparison with milk and its products, the God-given food of all young mammals (sucking animals). That is our case in a nutshell.

We have the goods. We can win. "Old stuff", you say? Yes, it is old stuff to about one in a hundred of the general public, but get these facts thoroughly rubbed into the subconsciousness of the mothers of this country and they will feed their families on milk and milk products regardless of a little extra cost. Our boys, shot to pieces in the war, grew new tissue and healed up their wounds faster on a milk diet than on any other foods or medicines known. Milk is medicine as well as food. Here again we can trump all the exploiters of vegetable fats. Milk is the only perfect food.

Money Makes the Mare Go

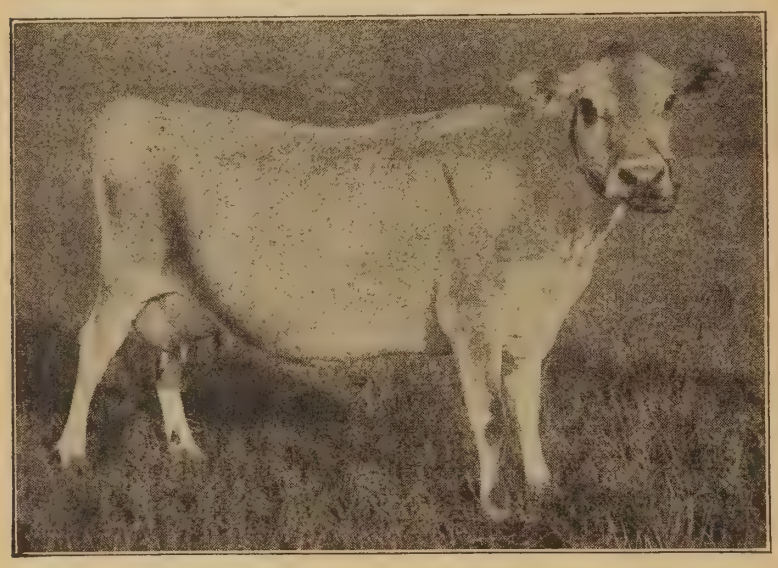
"Not the best but the cheapest fat will win," says some one. Grant that and the dairyman might as well quit first as last. Vegetable fats are cheap and are growing relatively cheaper all the time. Cheap lands and cheap labor, the world over, can produce them. They grow wild in the tropics. The shrewdest dealers with plenty of capital are after "the fat of the land". In the last issue of one of the leading magazines appears a full page ad, in beautiful colors, of a butter and lard substitute used in cooking. That ad for that single insertion costs just about $10,000; if it had been in black instead of colors, it would have cost only $7,500. Some millions of eyes will see that ad. The substitute in question is put out by a large southern corporation. It is made of cottonseed oil. Cottonseed oil has fallen from 28 cents to 12½ cents lately. Butterfat at 40 or even 30 cents is going to have hard sledding against that kind of competition. In the same magazine, one of the Chicago packers has a full page ad in colors (cost from $9,000 to $10,000) booming his oleomargarine, assuring the uninstructed public that his substitute is "Supreme on pancakes", "Equally good in cooking and baking",

FARMSTEAD OF A. SHERRARD, MICHIGAN



(Continued on page 205)

From Milk Route Driver to Farm Owner



H. E. BREMER, VERMONT

GEORGE E. Griggs owns one of the highest producing herds in Vermont testing associations. In 1920, his Jerseys averaged 396.9 lbs. fat. Mr. Griggs began as a driver on a milk route. Here he learned the essentials of distribution and marketing. During spare hours he worked on the farm and later became the manager. His fancy for good cattle led the owner to purchase four pure-bred Jersey calves. After developing and keeping records on these for eight years he decided it would be wiser to cash rent the farm and reap the fruits of his own managerial ability. Moreover, by so doing, he would get the gain on live stock inventory which he figured would be no small item in a few years.

In 1913 he, therefore, rented the farm. In three years he took seven cows as his increase and purchased the farm on which he now lives. The first year or two crops were discouraging and the dairy did not come up to his standard. Probably the main reason was that the land was not in shape to grow the right kind of roughages, the fences and buildings needed repairs, and the soil lacked plant food. These shortcomings he remedied one by one. A four-year rotation has been practiced. Corn, oats, and hay two years seemed most desirable. The superiority of clover over common roughages was well known to him. Hence, the seed mixture has been about as follows: Twelve pounds red clover, 3 lbs. alsike, and 1 peck timothy.

LADY EDOLA, DAM OF BUTTERCUP, OWNED BY GEO. E. GRIGGS, VERMONT

BUTTERCUP, 3-YEAR-OLD JERSEY, THE SECOND HIGHEST PRODUCER IN VERMONT COW TESTING ASSOCIATIONS
OWNED BY GEO. E. GRIGGS, VERMONT

All the meadow land is now top-dressed in the fall with about ten loads of manure to the acre. To retain all the flavor and quality, the hay is cut in June and cured in the cock. An early maturing variety of corn silage is grown. With such roughages the grain needed for winter becomes a less important factor than with most farmers. However, during the winter months grain is fed at the rate of one pound to every 2½ to 3 pounds of milk produced. Some grain is fed during the summer months and dry cows never go without a liberal feeding. It is the belief of the owner that graining the cows when dry is the time when it does the most good. Heifers are bred to freshen as two-year-olds and not under that age. The cows are allowed to stand dry six weeks on the average. They are cared for and milked regularly, watered not less than twice a day, and have the chill taken off the water in winter by using a tank heater. Each animal is groomed thoroughly every day during the stable months.

The records and the cows speak for themselves. In competition with approximately 5,000 cows in 191 different herds in Vermont, this herd took first honors for production for the year ending July, 1920. Mr. Griggs believes in keeping records in testing associations. The Rutland County Association ended the year with 633 cows on test, averaging 5,041 lbs. milk, 213.9 lbs. of butterfat, and an income over feed cost of $70.93.

The thirteen registered Jerseys in the Griggs herd, two of which were two-year-olds and three three-year-olds, averaged 7,505 lbs. of milk, 396.9 lbs. of butterfat, and an income over feed cost of $164.32 per cow. They received on the average 1,920 lbs. of early cut hay, 6,472 lbs. of well matured corn silage, and 3,053 lbs. of a well balanced grain ration. The total feed cost per cow, including pasture, was $182.38 for the year.

A Movie in the Making

DOROTHEA MC DOWELL, WASHINGTON, D. C.

SOMEONE has said that movie acting is all bluff. It isn't. I know it isn't, not because I am a movie star—I am not even a movie actress—but I have just seen a movie in the making and I can assure you that those who act their parts well not only act, they live the parts.

The movie I saw in the making was planned, prepared, and acted out by the Bureau of Animal Industry of the United States Department of Agriculture. As nearly all the actors and actresses are employees of the Department of Agriculture, it seems best to refer to them by using their stage names. The principal characters are farmer Benton, Mrs. Benton, their 15-year-old daughter, Mary, and little Baby Benton. The Bentons live on a large, rich farm. The purpose of this story is to show that all dairy cattle should be tested for tuberculosis and that, when this is neglected, great financial loss and even sickness and death may result.

Mr. Benton is a prosperous farmer. He lives in a fine farm house, has good barns and silos, uses up-to-date farm machinery, owns many work horses, employs several hired men, and he is proud of his fine looking herd of registered Jerseys. In building up the herd of Jerseys, he has selected high producing dairy cows and bred them to first class dairy sires. The cattle have always been well fed and well cared for in every way. In building up the herd, Mr. Benton has been careful in every respect except one, he has not tested the animals for tuberculosis.

A chain is no longer than its weakest link. The error of failing to test for tuberculosis proved to be a fatal one. Mr. Benton sells some of his hogs. Much of the meat is condemned on account of tuberculosis. A few of the chickens die and it is discovered that they died of tuberculosis. Finally skilled veterinarians test the cattle for tuberculosis and condemn 39 out of a herd of 57. Mary Benton has been sickly for some time. The doctor is called and he diagnoses her case as tuberculosis.

When Mr. and Mrs. Benton lose a large part of the hog money on account of tuberculosis, they are disappointed; when their cattle are condemned, they are quite discouraged; but when the doctor announces that Mary has tuberculosis, the parents are heart broken.

On the doctor's advice Mary is sent to a tuberculosis sanitarium where she stays for three long years. Her return home after she is completely cured is a joyful occasion. When she reaches the corner of the yard, she jumps from the auto and waving her hat to her father, mother, and little brother, she runs all the way to the front porch. Here she is welcomed with open arms and her mother cries from very joy.

After the greetings are over, Mary goes with her father and little brother to see the chickens, the hogs, the calves, and the cows. Her father presents her with a beautiful yearling heifer. Proudly he shows Mary the fine new tuberculosis-free accredited herd of Jersey cows and joyfully he announces that Mary may now have all the pure, fresh, wholesome Jersey milk she wants, and that she may drink it freely and without danger as the herd has been carefully tested and pronounced free from tuberculosis.

There are a few amusing and many impressive scenes in the play. While the hogs are being loaded for market, they are as contrary as hogs usually are. About the time of Mary's return Baby Benton feeds a calf, the little boy gets scared and runs and the calf chases him. The scene where Mary says farewell to her Betsey cow is very touching. Mary puts her arms around the cow's neck and weeps. She knows her cow has been condemned for tuberculosis, but Mary does not know that she herself is afflicted with the disease. One of the saddest scenes is where the doctor tells Mr. and Mrs. Benton that their daughter has tuberculosis and that she probably caught it from the cows. Baby Benton is cute and when he appears in the later scenes he plays around the farm house and is happy.

To me the acting out of the various scenes was very interesting and inspiring. It is one of the first plays of its kind to be produced by the Department of Agriculture, but it will probably be followed by many more in rapid succession. The director is a master hand, the actors did their work well, and the man in charge of the movie camera is an artist in his line. Layman though I be, I predict a quick and far reaching success for the new series of pictures of which this is among the first. In this play, at least, the movie film drives the lesson home. It teaches that a farmer may be emi-

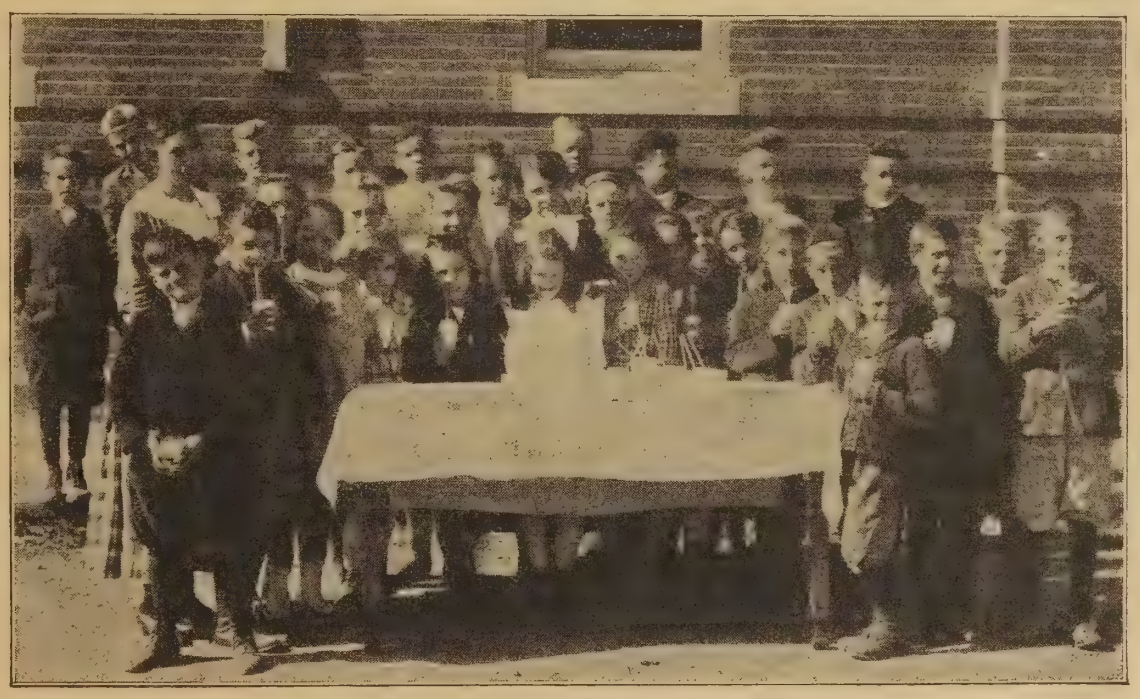
(Continued on page 204)

THE FARM WHERE THE MOVIE WAS MADE

MILK IN AN ARKANSAS SCHOOL

R. L. FOSTER, ARKANSAS

DOES good milk make happy, healthy, and mentally wide awake boys and girls? This picture of a group of pupils of the school at McGehee, Arkansas, seems to prove that it does. These happy faces are not there merely because the photographer came around to take their picture. It has been proved that milk in the ration of the school boy and girl helps them to do better work, makes them more cheerful, helps them to get more fun out of their play, and, last but not least, makes their grades in deportment at the end of the month rank higher. Of course there is an added attraction in drinking milk through a straw from bright shiny glasses, but it is a universal fact that where boys and girls have the chance to drink milk they like it.



The school at McGehee has the distinction of being the first school in Arkansas where a demonstration in feeding milk to school children has been carried out. Miss Mabel K. Stayton, home demonstration agent for Desha County, in visiting the schools noticed that some of the children showed signs of malnutrition, so she enlisted the aid of her live home demonstration club in McGehee. Mrs. Homer Corley, an enthusiastic club worker, gave them some facts that Dr. E. V. McCollum has worked out in 16 years of experimental work at the University of Wisconsin on food and its relation to the growing body. Dr. McCollum found that there are certain elements which are absolutely essential for proper growth. All foods do not contain these elements, and milk is the only one that contains them in sufficient quantities to sustain proper and vigorous growth. At the conclusion of his investigation, Dr. McCollum makes this sweeping statement: "The civilization of a nation depends upon the amount of milk and butter which that nation uses." So, to paraphrase the old saying that "Civilization follows the plow", we might better say that "Civilization follows the cow".

At a meeting of the home demonstration club, a committee was appointed to confer with W. H. Woodley, dairy specialist of the Agricultural Extension Division, University of Arkansas, to work out a plan to carry an experiment in feeding milk into the school. In February, 1920, Mr. Woodley visited Desha County and brought inspiration to this definite piece of work. He helped plan the demonstration in serving milk in one of the grades of the public school and gave a lecture on the food value of milk that was a great message. Mrs. G. W. Griffing, president of the demonstration club, and Miss Stayton easily secured financial aid from the business men of McGehee and the work was begun. Mrs. Kirk, teacher in the third grade, was enthusiastically in favor of trying the plan in her room and gave every assistance.

Very few objections were found among the parents of the school children. When one mother said to her little son that she was afraid they would all have to drink out of the same glass he replied, "No'm, they are going to paralyze all the glasses." The boy had the right impression, even if he did have his methods mixed a little. Each boy and girl had an individual glass in which the milk was served. The glass was thoroughly sterilized after being used each time and for further precaution the milk was served with a straw. No objection to drinking through a straw was found. A graham cracker was also served with each glass of milk.

The teacher was furnished with two sets of cards, one to be filled out before the work was begun and the other at the close of the demonstration, so that results could be checked. Under "habits of play" it was found that the children were happier and played more. "Habits of work" were much improved and deportment was better. "General health" was much improved. The children had better expression, were less fidgety, learned more easily, and there was improvement in color, and the old hungry expression was gone.

The principal of the school is much interested in the experiment and says it has been very helpful to the pupils. The people of McGehee are well pleased with the work. L. M. Gary, superintendent of schools in Desha County, with the aid of Mr. Woodley and Miss Stayton, is carrying on the work again this year with increased satisfactory and pleasing results.

LOYAL MILK FANS OF McGEHEE SCHOOL, ARKANSAS

The Human Side of Cow Testing

Horace Evans, Tester for the Plainfield Association, Tells His Former College Roommate How Charley Dean and Philip Overton Were Won Over to Better Methods

Nov. 28.

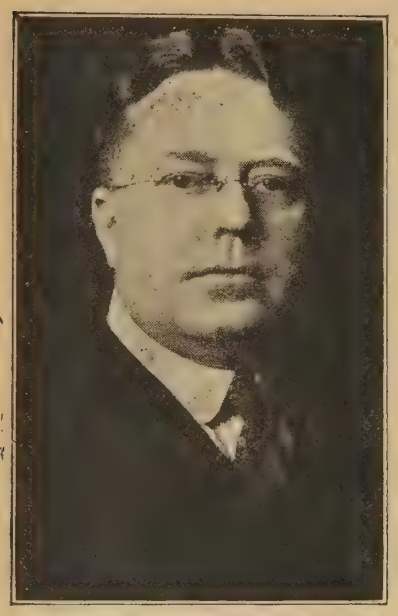
DEAR Mike:—Were the cow tester, in addition to his other qualifications, an expert psychologist and a trained diplomat, he would find use in the day's work for all his talents. In other words, it is quite as important for him to be able to accomplish his work smoothly and to present a few simple facts tactfully, yet effectively, as to have on tap a vast fund of dairy information.

Occasionally there is a farmer who is constantly on the alert for new bits of information that he can use in his business. This man is the one in a hundred. He does not shy at a technical term or two, and you can usually count on him as a leader in his community. The ninety and nine, however, present a different proposition. Many of these are not particularly interested in finding out new facts about their farming; the old way will do, and if they do accept a new idea it must come in a sugar-coated, easy-to-take form. Others—and this is by far the larger class—have a very real desire to know, but they are in the primary grade so far as scientific knowledge is concerned. Here is the big field for the cow tester's labor, and, to know when to use a liberal coating of sugar and when and how to present an experiment station truth in the language of the first reader, is the final measuring rod of his ability.

There I go again! Perhaps you are getting tired of this flow of cow tester's philosophy but, Mike, if you had been with me the last week-end probably your mind would be running in about the same channels. I tested for Charley Dean Saturday, also spending the greater part of Sunday with him. Charley has been one of the most difficult of the members for me to get to change his methods. Underfeeding is the principal failing of his dairy management. He has some cows of excellent ability, mostly good grades by a good sire, but also several registered animals that have all the breeding and appearances of high-caliber milk-makers. With the right kind of feeding I should expect some new association milk records to be hung up by this herd, but Charley never has given his cows a chance to show what they could do. Since coming to Plainfield I have talked to Charley about balanced rations, concentrates, carbohydrates, protein, and maintenance rations until almost breathless, but all of which, including any conversational attack of last Saturday, proved of no avail.

On Sunday I accompanied the Dean family to the little neighborhood church. The services were scarcely comparable to those which you and I used to attend at the university, yet out of the preacher's very ordinary discourse I obtained an idea. He was discussing the educational methods of the Great Teacher, as he had done probably a hundred times before, explaining that the repeated use of parables was because Christ was dealing with very simple folk who could understand only very simple things.

I suppose that in Sunday School and church I have heard the same thought expressed at least once for every year of my life, but something in the simplicity and timeliness of this rural pastor's talk set me to thinking about it especially. During the remainder of the service and the ride back to the Dean home I wondered whether I, in performing my little part as a missionary of better dairying, did not sometimes talk about things in a manner not wholly clear to men who, though just as intelligent, had not had the particular advantages that two or three years of college had given me. I resolved to give the lesson of the parables a tryout, and I did not have long to wait for an opportunity to do so.



While we were at church the wind switched 'round to the North, reminding us that late November could have its wintry days. It became so cool in the house that a fire was needed, so while Mrs. Dean and her daughter were getting dinner Charley and I moved the heater from its summer resting place in the woodshed into position for its annual engagement with Old Man Winter. As the weather was not severe, Charley started only a light fire, adding but little coal. Though it burned, the heat scarcely warmed the heavy iron walls of the stove, distributing practically no heat to the room. While amiably discussing our fire-building, a happy thought struck me.

"Building a fire," I said innocently, "is a good deal like feeding a cow. You have to give her a good deal of feed just to keep her body warm before she uses any of it to put milk in the pail."

Charley instantly stopped his firing

(Continued on page 200)

Oregon Dairymen's By-Products Corporation

A. D. KATZ

It was under his leadership and organizing ability that the Oregon Dairymen's Co-operative League and Oregon Dairymen's By-Products Corporation were formed. He is a successful business man and bears the enviable reputation of being honest. The farmers have put their faith in him and he has made a splendid fight for them and won.

SOME day we may write a complete history of the Oregon Dairymen's By-Products Corporation, for it will make a story as engrossing and exciting as Dr. Carl Graves' book describing the work of Germany's Secret Service Department. But at this time it is perhaps a bit early to relate all the personal experiences and opposition the organizers met when they were forming this co-operative enterprise, and, furthermore, we do not desire to detract from the description we shall give of the work and purpose of the Oregon Dairymen's By-Products Corporation. It will be sufficient to say that this corporation came into existence because there was a demand for it. There was opposition by the milk distributors and other agencies buying milk in Oregon. The men who had the work of organizing in charge were maligned, misrepresented, and held up to scorn and derision, but they had a worthy purpose and continued their task till it was completed and their enemies defeated. The Oregon Dairymen's By-Products Corporation is a reality; it is organized on a truly co-operative basis; it is conducting its affairs upon a businesslike basis and the milk producers are masters of their own products. It is the best organized co-operative dairymen's by-products corporation that we have studied.

The headquarters of the Oregon Dairymen's By-Products Corporation is Portland. That city's milk supply is distributed by 200 wagons, 62 owned by milk dealers and 128 by producer — distributors, that is, persons who produce their milk and distribute it, and they deliver about 55% of the bottled milk. The milk supply of Portland must come from tuberculosis-free herds or it must be pasteurized. The distributors in November were receiving 14½ cents per quart and the producer—distributors from 16 to 18 cents a quart. The milk varies from 4 to 6 per cent in fat content. The By-Products Corporation retails no milk or other dairy products, but sells milk to distributors, wholesales both bottled and bulk milk to hotels and restaurants, and manufactures so-called surplus milk into butter, cheese, or cream.

It will be immediately observed that the large number of producer—distributors presented a somewhat different problem of handling milk than is found in most cities. It also gave the organizers of the Oregon Co-operative Dairymen's League and the Oregon Dairymen's By-Products Corporation a difficult situation to handle. All the producer—distributors did not join these associations and those that did failed to give them proper support. In fact, they were dead timber, but they needed just what the two organizations would provide. It was through the Oregon Dairymen's Co-operative League and the Oregon Dairymen's By-Products Corporation that they were able to advance the prices of their milk, yet they do not give those who are trying to organize the milk producers proper support.

Like most sections throughout the country, the milk producers made little or no attempt to organize or to co-operate in carrying on their business. Each producer conducted his affairs the best he could and sold his milk to the firm that would give him the best price. This continued till 1917 when the milk producers found themselves in a most unprofitable business and if they were to stay in the business better prices would have to be paid for their product. The milk distributors held they could not pay more, for the producer—distributors would undersell them and take their customers away. In 1917 milk was being sold as low as $1.35 per hundred. Some years before this the milk brought a return to the producers that would not only buy the feed for their cows but also their groceries, but the 1917 price scarcely paid for the feed the cows consumed.

The situation grew so bad that a few of the leading business men of Portland realized that the milk supply was in danger. Among these men were the late W. W. Cotton, attorney for a large railroad and owner of a farm; Alma D. Katz, head of a large life insurance company and also owner of a dairy farm; and W. S. Ladd, banker and breeder of Jersey cattle. Here was a group of business men who realized that to save the dairy industry, to stabilize the price of milk, the milk producers must bind themselves together that their product might be handled and marketed co-operatively. Circumstances brought Mr. Katz the burden of bringing the farmers together and organizing them into a co-operative milk producers' association formed upon the plan of the New York Dairymen's League. This was a beginning, but there followed the demand for another organization which would care for the surplus milk, establish cheeseries, creameries, and a milk plant in Portland for preparing milk for wholesale purposes. In short, a co-operative manufacturing and marketing company.

This co-operative marketing company is formed upon a truly co-operative basis. It is a form of organization which we can commend to all communities desiring to establish a co-operative enterprise. It is a non-profit association, but permitted to issue $502,500 worth of stock of which $500,000 is preferred, bearing 7 per cent interest, and $2,500 is common. There are 250 shares of common with a par value $10.00 per share. The common stock is owned by the Oregon Dairymen's Co-operative League, but single shares of stock are placed in the names of individuals to qualify them as stockholders for the purpose of acting as directors of the corporation. It is provided in the constitution to retire one-fifth of the preferred stock each year beginning December, 1921. A certain percentage is deducted from the products sold to provide funds for retiring the preferred stock as it comes due. We publish on page 180 the constitution and by-laws which give in detail the method of organization and show clearly how the business of the co-operative marketing company is carried on. There will also be found elsewhere the Oregon Dairymen's Co-operative League Marketing Agreement.

Contracts

The milk producers sell their milk to the Oregon Dairymen's Co-operative League and this association hands over the milk to the Oregon Dairymen's By-Products Corporation to be manufactured into butter, cheese, or cream or sold for direct consumption

ALBERT S. HALL

Manager of Oregon Dairymen's By-Products Corporation. Mr Hall's service was not obtained till after the close of the World's War as he was in the service.

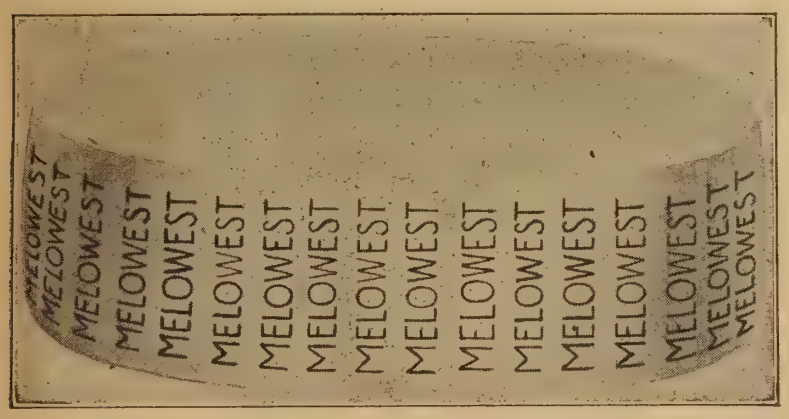
or to be marketed. The contract covers a period of five and a half years and provides penalties if a milk producer violates it. It would have been unsafe for the organizers to have proceeded with their work unless the milk producers were willing to tie themselves to a binding contract covering several years. Many a man will make a verbal agreement to sell his product to his own association, but has no hesitancy in selling it to some corporation or person if a little more is offered for it or at some critical period when sticking together would mean success. In order to prevent any such action on the part of any of the milk producers a contract covering five and a half years was drawn, and it has teeth.

This agreement between the milk producers and their own organization gave opportunity for the opponents of the marketing company to point out its penalties, to say it was autocratic, that it was equivalent to signing away the farm, and, depending upon its interpretation, the life of the producer and his family. The producers rallied to their own organization, for their lesson in marketing had been so disastrous that they felt no matter what happened they would be no worse off under a binding contract which forced them to stick together than under the old system of each one for himself and the devil take the hindmost.

The circumstances which followed emphasize the necessity of a contract, at least when organizing upon a large scale and on a truly co-operative basis. The co-operative marketing company began to receive milk on July first, 1920, and on November first not all the milk had been paid for. At the end of each month certificates of indebtedness amounting to 75% of the value of the milk or cream delivered are issued and the other 25% is not paid till all the product of that month is sold and paid for. We shall later explain the pooling system and how it is operated. The fact that full settlement had not been made for July milk on

BUILT BY OREGON DAIRYMEN'S CO-OPERATIVE LEAGUE IN 1919
Now owned by Oregon Dairymen's By-Products Corporation and used for processing milk.

November first caused some of the milk producers to become concerned about getting their balances and a letter was directed to A. D. Katz, president of the marketing company, and A. S. Hall, manager.



In this letter complaint was made of the slowness in paying for all producers' products, and this suggestion was made: "We are producing daily butter and cheese for which you are receiving money daily. As fast as this money comes in, check it out to the members, have a pay day every ten days, reserving enough to pay necessary expenses and overhead. The returns are in for July, August, and up to September 15th. There is no plausible excuse for not paying for this milk and fat." It should be borne in mind that these producers had been paid about 75% of what was due them. A longer time was required to market and get returns on all products sold for the month of July than these producers could appreciate. The situation caused them to view their own association and officials with concern, and if it had not been for the contract these producers would have sold their milk to another market. This would have brought disaster to their own co-operative marketing company and when it was doing better than private concerns by them. This will be shown by the July cheese account is collected. The closing of other pools will follow.

"You say that we have had your 'entire revenue for our produce since July 1st'. As a matter of fact have you not turned your produce over to your own organization—yourselves?

"Your board of directors has instructed us not to pay any money out to patrons until we collect it, and the by-laws adopted by them are emphatic on that point Your organization by following this plan will never wreck on a financial shortage.

"The pooling system was thoroughly explained to you before you signed, particularly the fact that the product will be sold and the proceeds put into a pool and that each draws out his share of the pooled proceeds. It is beyond human ability to give anyone a definite figure as to what you are going to receive on the product until the money is actually received. If you were selling to someone else besides yourselves, that someone would pay you a fixed price and would pay the balance into his own pocket. You have gone into an organization with the definite intention of putting the money all back into your own pocket, and no one knows how much that is going to be until the last of it has been collected.

"You are members of an organization that is financially sound. It is

Melowest is the brand chosen for the best grades of butter and cream. This illustration indicates how the cheese is branded.

report which we shall publish in connection with this article.

We print a portion of the letter which Mr. Katz wrote to the producers as it explains why the balances for the months of July and August were not paid by November first and how the pooling system operates:

"We believe your records will show you received partial payments for July and August shipments, and all cream shippers have received partial payment for September. These partial payments approximate three-fourths of the pool payment.

"We hope that you clearly understand that no true co-operative organization like ours can announce a price nor make final payment for any product until that product has been sold and the money collected. However, our trade acceptance plan, which we have previously explained to you, enables you to get the money not yet due.

"The milk pools for Coos and Curry counties cannot be closed until final settlement is made for July cheese. July being the first month of operation under the pooling system, we were all inexperienced. Two months ago the accounting department thought the pool could be closed within a few days, and our field representatives reported to the members. Unfortunately the delay in closing up the legal phases of the transfer of some of the plants and the delay in selling some of the July cheese of poor quality, the closing has been impossible.

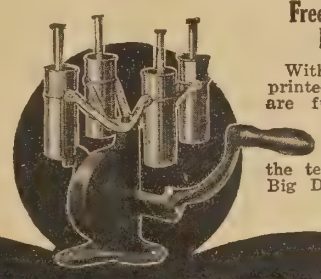
"You will get your balance of July money just as soon as the last July

founded on the right principle. It has been approved by the State and Federal Bureau of Markets, and by the State Dairy and Food Commissioner. Its success is limited only by the ability of its members to work together and by the quality of the product they produce.

"Thousands of dollars have been spent by the enemies of co-operative marketing in an attempt to disrupt it. Their reasons are apparent to every one. They do not want you to succeed. We feel confident that you will take these matters seriously and refuse to listen to the propaganda they are circulating."

A banker in behalf of a milk producer wrote to Mr. Katz regarding the solvency of the co-operative marketing company and we quote two paragraphs of Mr. Katz's letter to him:

"The League started in on July 1st with a string of factories which had been poorly financed and poorly arranged. Salary and expenses in many cases were out of reason and such a thing as efficiency scarcely existed. These things could not all be changed in a day; such changes have to come about gradually, for reasons which you as a business man realize fully. The quality of product had been irregular, not uniform, and very poor generally for such a long period that the produce was definitely branded in the market as low grade. During the time the League has operated we have succeeded in more than doubling the percentage of first grade product, which improvement will eventually overcome the bad reputation that your section has in the markets. We



$6.95 BUYS A CREPACO Babcock MILK TESTER

Don't Keep Boarder Cows!

Appearances are deceiving. The cow you think is best may be unprofitable. The man who **knows** is the man who succeeds. The Crepaco Babcock Tester shown below will point out the unprofitable cow. It will enable you to buy cows with open eyes. It will enable you to secure adequate remuneration for your milk and cream.

Free Glassware, Etc.

For $6.95 we furnish a high grade, accurate, 4-bottle testing machine, one acid measure, pipette, two brushes, one bottle acid, and instruction sheet. Everything complete for testing.

Free Instructions Furnished

With each machine printed instructions are furnished which are plain and simple. A child can make the tests. Write for Big Dairy Catalogue.

"Dandelion Butter Color" Is Big Prize Winner

Be sure and use Dandelion Brand Butter Color and give your butter that June golden shade which brings **top prices** —pleasing the eye and tempting the palate.

The High Scores of 1920

In many of the State Buttermakers' Shows, first awards were won by users of old reliable "Dandelion Brand." You can't miss by giving a trial to the butter color which helps 90% of the successful buttermakers of America.

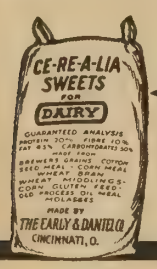
Never gets rancid. Doesn't affect flavor.
Doesn't color the buttermilk. Leaves no sediment.
Colors more butter to the gallon.

Dandelion Brand Butter Color is purely vegetable and fully meets requirements of all Food laws—State and National. Ask your jobber for prices.

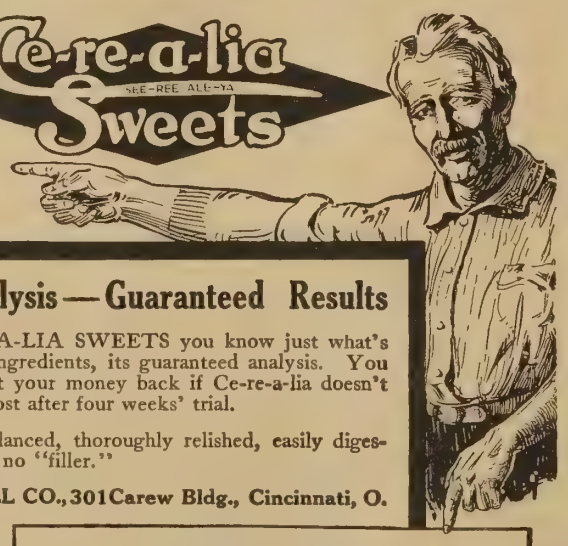
WELLS & RICHARDSON CO., Inc. BURLINGTON, VERMONT

Primrose—Motor Driven

A snap of the button and—let there be cream!



THAT is all the work there is to separating with the **motor-drive Primrose** once the supply can is filled with milk. Electricity takes the place of human energy. The willing motor shoulders this task and turns the separator at the same uniform speed from the beginning of the run to the end.



The **motor-drive Primrose** is a self-contained power unit and cream separator. Securely mounted on a substantial base which is an extension of the shelf at the top of the separator stool, the economical, tireless motor is ever ready for instant service. A snap of the electric switch—and the separator is put in motion. The motor is completely enclosed to exclude dirt and water.

Where electric power is available on the dairy farm, the **motor-drive Primrose** must be of more than passing interest to the dairyman. **Primrose** skimming efficiency plus electric operating efficiency makes an unbeatable combination. See the International dealer.

Feed one cow Ce-re-a-lia Sweets for 4 weeks. If you don't find *money-making* increase in milk flow or test, feed costs you nothing. *Write for details.*

SEED

By Prepaid Express—Order NOW—Prices Going Up. Our first quality, hardy northern-grown grass seed, famous for its frost and drought resisting qualities. High and strong in germination. Our price about two-thirds below last year, but now tending upward. Order EARLY. We pay all express or freight charges; bags free. Specials: Alsike and Timothy mixed $5.85 per bu.; Alfalfa $12.90 bu.; Medium Red Clover $13.50 bu.; Alsike $16 bu.; Timothy $3.95 bu.; Sweet Clover $4.50 bu.; Sudan Grass 8½c per lb. As seedsmen of many years experience we have carefully graded and tested these seeds. We guarantee them to be as represented, or your money back. You must be satisfied. We are not connected or associated with any other house selling direct to farmers. Order TODAY or send name for price list and full particulars. **World Seed Company, 123 W. Madison St., Dept. P, Chicago, Ill.**

have cut down the operating expenses of the factories enormously and have built an organization of competent men who will cut down manufacturing expenses very materially as time goes on. We have put the factories on a business basis, setting up reserves to cover depreciation and setting aside funds for the payment of interest, taxes, etc., so that we know what our factories are doing; whereas, in the past the factories have worked on the system of calling all money collected earnings and have fooled themselves as to what the actual net returns were on their product. We have met the worst jam which has ever occurred in the history of the dairy industry in Oregon and believe we have worked out our business so that we can weather it without letting the industry go to pieces as it inevitably would have done were it not for the marketing association to hold it together.

"Now, regarding the financial statements, it is absurd to talk about financial responsibility of the League. Different bankers have asked us for financial statements, thoughtlessly, but have laughed at themselves when they came to realize the kind of financial statement they wanted. Here you have a quantity of milk being turned into the League to be sold between the 1st and the 30th of the month. All of this milk is sold; all of the expense of selling and manufacturing is deducted; and all of the balance is returned to the dairyman in proportion to the amount of milk he delivers. At the end of the month and the beginning of the next month, the same thing happens over again. The entire assets of the organization are its furniture and fixtures and its factories. The liabilities of the organization are, naturally, the price paid for furniture and fixtures and factories. Any credit which we ask the banks to extend to our farmers is on a basis, not of the League, but is a straight out credit on a fraction of the amount of product which the dairyman has delivered to the League and which has not yet been collected for. Trade acceptances are issued only to about three-fourths the estimated value of actual delivered product."

It will be observed how difficult it is for the producers and their bankers to fully understand the system of pooling milk and the necessary delay in paying for it. There is no capital to pay for milk. The producer cannot receive payment in full for his product until it has all been sold and paid for. Then he gets all it brings less cost of manufacture, taxes, interest on preferred stock, and sinking fund for retiring the preferred stock.

Pooling

The Oregon Dairymen's By-product Corporation operates throughout the state, but it has established several zones for the pooling of milk and cream. Take zone one from which Portland gets its milk supply, and there are three pools within this zone. Pool 1-x is milk for city supply and condensers, pool 1-y is sweet cream, and pool 1-z is sour cream. Each pool is operated as a separate account and the producers receive for their products what the pools to which they belong return. It will be noted in the following statements that the whole milk pool in zone one paid the producers $2.839 per hundred for milk; the sweet cream pool returned producers .813 cents per pound for fat, and the sour cream pool returned .549 cents per pound.

Statments of the July Pool

Closing figures, November 20, 1920, are as follows:

July Pool Closing Figures November 20, 1920.

Pool	Gross earnings per cwt.	Expenses manuf. & selling & overhead	Sinking fund to retire preferred stock	Interest on preferred stock fund	Net earnings to member
Willamette Milk, city, condensery	$3.107	$.23	$.028	$.0095	$2.839 cwt.
Willamette Sweet cream	.952	.128	.008	.003	.813 lb. fat
Willamette Sour cream	.636	.08	.005	.002	.549 lb. fat
Coos-Curry Milk	2.315	.41	.02	.007	1.869 cwt.
Coos-Curry Cream	.655	.075	.006	.002	.571 lb. fat

These figures are based on pounds butterfat in cream pools and on 3.8% milk in milk pools.

This is only explanatory. The so-many-cents-per-point method is not used in making payment to members, although dealers pay us on 3.8 base with 5c per point.

Tests above or below 3.8% make a difference of about 5c per point in Zone 2 milk and 7c per point in Zone 1 milk. Expenses include all manufacturing, selling, shipping, advertising, overhead, office, and all other expenses.

Sinking fund is the plant retirement fund, and interest fund is interest on outstanding stock.

Zone	Gross receipts	Paym'ts. & advances	Gross expenses	% of gross	Plant Paym't.	Account Oregon Dairymen's By-products Corporation Interest Paym't.	Final Paym't. on Product	Am't. of Product Lbs.
1—X (Milk)	$126,313.83	$95,701.68	$9,369.10	7.4	$1,142.35	$399.82	$19,700.88	3,922,311
1—Y (Sweet cream)	8,885.82	4,616.74	1,200.83	13.5	80.77	28.27	2,959.21	9,330
1—Z (Sour cream)	13,223.75	8,386.48	1,702.48	12.8	120.00	42.00	2,972.87	20,678
2—X (Milk)	75,344.75	47,162.57	13,372.38	17.7	680.80	238.28	13,890.72	3,076,722
2—Z (Sour cream)	31,403.81	19,455.37	3,626.28	11.5	283.86	99.35	7,938.95	47,804
Total	$255,171.96	$175,322.76	$29,271.07		$2,307.78	$807.72	$47,462.63	

Note:—Gross receipts is gross collections for product.

Payments and advances cover all trade acceptances, advances, and payments prior to closing.

Gross expenses include depreciation of factories, selling, shipping, manufacturing, overhead and all other expenses.

% of gross means relation of gross expenses to gross receipts.

Plant payment is deduction set aside to pay for factories by preferred stock retirement.

Final payment is balance due members at closing.

Amount of product is actual pounds of milk and pounds of butterfat.

Zone 1 constitutes the Portland market and the condensery section.

Zone 2 is for Coos and Curry Counties where practically all the milk was made into cheese.

It has not been our purpose to give the obstacles which the organizers of the Oregon Dairymen's Co-operative League and Oregon Dairymen's By-products Corporation had to meet and overcome or to give the personal difficulties which they encountered, but rather an outline of why the co-operative marketing company was formed and how it is operated. Its success de-

pends upon the milk producers and its management. The officials have the confidence of the producers and the business men of Portland. They have proved their business abilities. It is our opinion that the hardest part of their work is over, for the period just before final settlement for July milk was most trying, but now each month a pool is closed and paid for in full.

We consider the Oregon Dairymen's By-Products Corporation organized

M. S. SHROCK
Field organizer of Oregon Dairymen's By-Products Corporation and editor Oregon League Dairyman.

on the proper basis for a truly co-operative enterprise. If it is in any danger of failure it is because the corporation has been forced to expand rapidly. Expansion came faster than the officials desired. In less than four months they built an organization and provided equipment for handling dairy products whose value amounted to $5,000,000 annually and under conditions that would have defeated men less determined to succeed.

Bull Association "Reconstructing" Fire Swept Minnesota County

HOARD'S DAIRYMAN:—Not infrequently misfortunes prove stepping stones to greater achievements—the set-back of today becoming the blessing in disguise of tomorrow. Rarely, however, does the aftermath of a devastating forest fire take such a peculiar turn as to give impetus for the formation of co-operative bull associations as illustrated by the example of the Minnesota Fire Sufferers' Relief Association in St. Louis County. The quickening effect of the misfortune of the conflagration of 1918 was no less far-reaching in influence than instantaneous in producing results.

All told, nine bull associations are functioning in this one county, involving a membership of 364 farmers, 35 pure-bred Guernsey and Holstein-Friesian bulls, and 26 pure-bred cows in an aggregate cow population of 1,859 animals. This formidable organization represents two years' effort, a rescue effort to recover from the losses sustained by the ravages of fire which swept the farming areas of the county in 1918. The co-operative bull association, as the term would imply, as operative in St. Louis County, signifies that groups of farmers exercise joint ownership in the use and exchange of sires of certain breeding qualifications. Marketing surplus animals and dairy products and combatting diseases of cattle are likewise promoted by the mutually pledged interests of the co-operative enterprise. An investment of $50 by the individual farmer acquires a share in five pure-bred bulls.

Perhaps imbued by the amazingly swift success of the St. Louis County association, and in the hope of stimulating other counties to duplicate this example, the Dairy Division of the United States Department of Agriculture has compiled data relating to eight dairying districts in Iowa, Minnesota, and Massachusetts in which no co-operative bull associations existed. The inventory included 1,219 farmers, owning 817 bulls, valued at $76 each. The conclusion is that if these dairymen, properly organized, had made an equal investment in pure-bred sires instead of inferior ones, they could have acquired bulls having a valuation of $283. Four animals are being supported where one of superior quality would suffice.

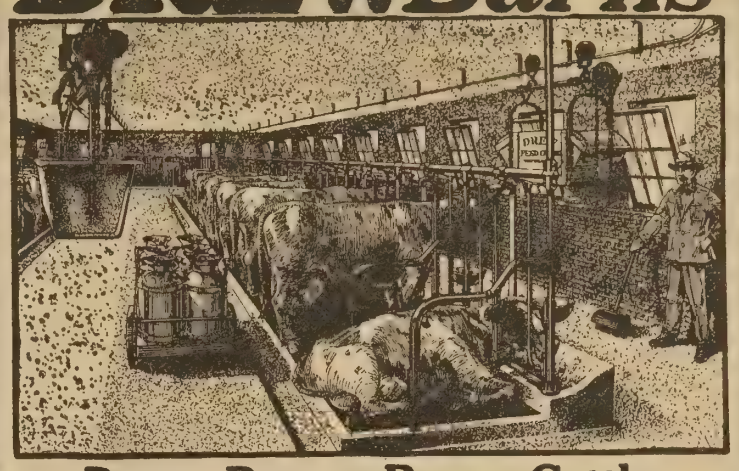
The average price paid by co-operative organizations for registered sires is approximately $240, whereas bulls in use prior to the formation of these associations were appraised at $89. In one organization, with a membership of 100 farmers, the original outlay for pure-bred bulls was only $23.

Farmers and dairymen, 150 strong n Maryland, Michigan, and Minnesota, esteem their membership in co-operative bull associations of such value as to enhance the financial worth of the offspring in the first generation of calves from 30 to 80 per cent with an average of 65 per cent. "Dairymen unable to purchase such bulls as needed to develop a profitable pure-bred herd are realizing that the bull association overcomes the difficulty and saves money that can be used toward the purchase of registered females," is the expression voiced by the United States Dairy Division.

Douglas County, Minnesota, has the distinction of having successfully formed the first co-operative bull association in the United States, organized in 1909. The college of agriculture of Michigan made the first attempt in organizing such associations, but its efforts struck boulders and, while ironing out the kinks in the tangle, Douglas County, Minnesota, attained the coveted goal first. The latest compilation places Pennsylvania in the forefront for its number of bull associations.

The plan of organization, as generally subscribed to, is simple in operation. The association is parcelled into blocks, each of which maintains the requisite number of cows, with the exclusive use of one of the sires of the organization. Bulls are exchanged with companion blocks every two years, thereby obviating inbreeding. Each unit is divided into three or four blocks. The original cost of a bull is divided by the number of cows comprising the block. Concretely illustrated, a $200 sire for a block of 50 cows would entail an assessment of $4 to the animal.

Washington, D. C. S. R. WINTERS.



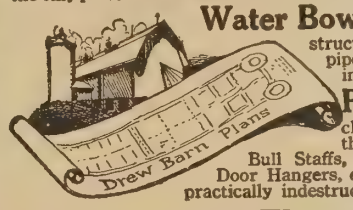
Outlines of Dairy Bacteriology in Eleventh Edition

The eleventh edition of Russell and Hastings' "Outlines of Dairy Bacteriology" is now in print. This book had its origin in a series of lectures in the University of Wisconsin. It is published in such form as to serve as a practical guide not only to the student but to those who work with dairy products. The discussions of bacteria, yeasts, and molds in non-technical terms are easily understood by the milk plant operator and the butter and cheese maker who have not had laboratory training. The book's aim, as expressed by its authors, is "to tell in simple language the facts the successful operator must know and must use".

The new edition of this practical book is available for distribution from this office at the publisher's price of $1.60.

DAIRY, HORSE AND HOG BARN EQUIPMENT

DREW Steel Equipped Barns



Better Barn—Better Cattle

Drew equipped barns are better barns. Drew fixtures decrease labor—increase profits. Drew—*the line of exclusive features*—cost no more than others. Twenty-two years' experience backs each of these exclusive features. Read them:

Drew Stalls and Stanchions 1. Double swinging sure stop. 2. Spring Cushion Bottom. 3. Indestructible stall-posts and partitions of rolled steel. 4. Double sure-lock stanchions. 5. Adjustment device for any neck size. 6. Simple alignment device.

Litter Carriers 1. Four lift chains. 2. Double rolling shaft lift. 3. 11" extra lift over any other. 4. Hollow tubular track, forming the only perfect track-cable connection. 5. Heaviest load easily lifted with one hand.

Water Bowls 1. Double Gravity Lock. 2. Reinforced castings. 3. Brass valve construction. 4. Smooth inside surface. 5. Double pipe strength at bowl. 6. Easily and quickly installed.

Pens Bull—Cow—Calf—Hog. All of best rolled steel. Strong—easy to clean. They keep your herd at top notch all the time. We also make Feed Carriers, Bull Staffs, Ventilators, Feed Trucks, Hay Tools, Door Hangers, etc., etc. Drew Fixtures last—they are practically indestructible.

Free Barn Floor Plans

We maintain a department of experts in planning, designing, remodeling, and building dairy and hog barns. Our 22 years of experience is at your disposal. Write and tell us how many head of live stock you handle—our advice, suggestions and barn floor plans free.

DREW—THE LINE OF EXCLUSIVE FEATURES

Cow Health and Your Wealth

There is a mighty close connection between the two. Your income—*your wealth*—depends upon the amount of milk and butter-fat your herd produces. And heavy, profitable production depends upon the *health* and *vigor* of each cow. No weak, sickly, run-down cow can be either a big producer or a good breeder.

So put your entire herd in the big-producing class by using

Pratts Cow Tonic

the dependable, tested regulator and digestive tonic. It makes inferior cows good producers—it makes good cows better producers. All because it *naturally* tones up the whole system—helps strengthen and invigorate the organs of digestion and milk production. The result is a bigger flow of richer milk—*more profit.*

And healthy cows are better breeders, too, producing the strong calves that are worth growing. So there's a double reason for regularly using Pratts Cow Tonic.

Successful, progressive dairymen everywhere are using Pratts Cow Tonic because they have found *it pays.* Prove its value in *your own herd.* Make the test, then

EDITORIAL COMMENT

It has been said that to hold the World Dairy Congress in this country in 1922 will help to dignify the dairy industry in the minds of the consumers. We can think of a still better and a more permanent way of dignifying the dairy industry and that is to produce all high quality dairy products.

In the year 1920, there were severe declines in the prices of most farm products. The rapid falling off in the prices of farm products began about October 1st and continued the rest of the year. In the aggregate, the value of farm products and of farm animal products and animals in 1920 declined about $5,105,000,000 below the total of 1919. The 1919 crop sold for $24,961,000,000 and the 1920 crop sold for $19,856,000,000. Notwithstanding the decrease in the number of dairy cows in 1920, which was 1.3%, there was an increased return in 1920 for dairy products over 1919, amounting to 311 millions of dollars.

We have pointed out many times the stability of the dairy industry. Here we have a concrete example of the dairy business returning 311 millions of dollars more in 1920 than in 1919, when other farm products sold for $5,105,000,000 less. Here and there are bad spots in the dairy industry and considerable dissatisfaction is found but an industry that has gained in returns when other branches of agriculture have lost should assure the most sceptical of its stability and the safety with which it can be followed.

MUST FEDERATE

It does not require deep study of the butter market or the demands of the consumer to learn that high quality butter, uniform in grade, is the most salable and brings the highest returns. Those who do not fully appreciate this should note the prices being paid for lower scoring butter compared to that scoring 92 or better. The larger creameries have appreciated the importance of making a uniform grade of butter for they know the consumer becomes accustomed to it and prefers it to butter varying in quality. The co-operative creameries which have been working individually, independent of each other's welfare, may well consider the necessity of federating themselves by communities or sections for the purpose of producing a uniform quality of butter and establishing a central sales agency.

Professor A. J. McGuire of the Dairy Extension Service at Minnesota, after studying New York and Chicago markets, says, "First, we must bring all our butter up to standard; second, we must make all our butter uniform in color, salt, and texture. All Danish butter has a uniform characteristic as though it had been made by one man. Third, we must establish our own selling agency, ship in carload lots, the butter to be graded here in Minnesota, and shipped out under one sales agency."

In order to bring about such a system of marketing and the making of a uniform grade of butter, requires at least two steps: First, the creameries must associate together in order to establish a system of instruction that will bring about a uniform grade of butter. It means the grading of cream and paying for it according to its quality. It also requires federations to establish an agency for handling and shipping their product. We look upon the federation of creameries and cheese factories as being highly essential. If they fail to see the necessity of taking this step we have considerable concern regarding their future.

COST OF MILK PRODUCTION

Monthly reports have been gathered by the University of Wisconsin from representative districts in the state on the cost of producing milk. An effort was made to find out how the different common farm practices affect the cost of production and what the relation is between costs and prices. B. H. Hibbard and S. W. Mendum have charge of this work.

The two main items in the cost of producing milk are feed and labor which constitute 75% of the total when labor is figured at 40 cents per hour. Prices in 1919 and 1920 have only yielded market values for feeds on the farms of the most skillful dairymen owning high producing herds. In the studies made it is assumed that the sale of surplus stock and the value of manure offset other items in the cost.

A very important factor in the cost of milk is the producing capacity of the cow. While it has been found that the cost of keeping a 10,000-pound cow is more than 50% above that for a 4,000-pound cow, it is proved that the milk from the high producer is made at less than 50% of the cost of that from the low producer. The time of year has a great influence on prices, influencing both the cost of production and the price received. While many farmers failed to receive as much as $2.00 per 100 lbs. for milk during summer while cows are on pasture and in heaviest production, the winter price was above $3.00. This made it possible for one dairyman who produced milk averaging a test of 3.57% to net an average of $3.01 per 100 lbs. though the price was above $3.00 in only four months of the twelve and fell to $2.37 one month.

In Sheboygan County complete records were kept on six farms for twelve consecutive months. The average production of the 89 cows in the six herds was 9,900 lbs. of milk. One herd averaged 7,700 lbs. and two averaged 12,000 lbs. Only one-third of the cows were pure-breds. On these six farms, the equivalent of about 73 lbs. of grain was fed for each 100 lbs. of milk produced, the actual pounds of grain being less than one pound for each three of milk. Pasture was estimated to make up about 22% of the feed consumed. It was found that while the cost for pasture was very much less than for the quantity of feed it replaced, those farmers who rely on the low cost of pasture to make profits from their herds received low prices for their milk, since the bulk of their production comes in the months of low milk prices. The amount of labor required in the production of 100 lbs. of milk varied from 1.2 hours to 2.93 hours. Figuring grain at $60.00 per ton and labor at 40 cents per hour, the average cost of milk on these six farms was $2.93, the range being $2.40 to $3.27. It is pointed out that the six farms studied are far above the average in quality of their herds. Also the fact is emphasized that the cost of milk increases as the rate of production decreases, all factors pointing to the advantage of keeping high producing cows.

B. F. HARRIS

In the death of B. F. Harris, banker and farmer, the agricultural interests of this country suffer a severe loss. Mr. Harris fully appreciated the necessity of establishing a system of credit which would properly finance agriculture and he also appreciated the meaning of agriculture to the welfare of the nation. No other banker in the country did so much to arouse the bankers of America to the proper interest in, and their obligations to, agriculture as our basic industry. He was a man of keen intellect, of untiring energy, and had an enthusiasm and understanding of the relationship between the farmer and the banker which enabled him to lead the bankers to see the necessity of serving the farmers better.

Mr. J. R. Wheeler, former chairman of the Agricultural Committee of the Wisconsin Bankers' Association, says: "While chairman of the Agricultural Commission of the American Bankers' Association, Mr. Harris called a convention at Chicago of the leading educators, journalists, bankers, and farmers in the United States. The accomplishments of this meeting will never die. It demonstrated that the bankers were not attempting to teach agriculture, but rather to cooperate and assist to connect up with the sources of knowledge on better agriculture and better country life conditions. It indicated to the bankers what they were not to do, as well as what they could do. It emphasized the necessity of a greater development of the basic industry, agriculture, and it stimulated an interest on the part of the farmers, bankers, journalists, and educators which vitalized the agricultural and educational movement."

The following statement made by Mr. Harris in an address before the convention in Chicago well shows the motives which guided his thought and action. He said: "The man who devotes all of his time to the accumulation of property, straddling or evading vital business and governmental questions, oblivious of the debt he owes society, absorbing everything he touches, giving nothing in return, is the type of citizen that is little better than the one who goes wrong, for his selfishness makes the other possible."

If we had more bankers and citizens engaged in other industries like the late B. F. Harris of Champaign, Illinois, there would not be the prejudice or the complaint so often heard by those engaged in agriculture against the man whose duty it is to help finance agricultural activities. Mr. Harris was preeminently a great man because he assisted in not only promoting principles and practices which developed the banking industry and farming but also good citizenship.

WHY PURE-BREDS

The customary answer to the question, "why are pure-breds kept", is that they will produce more milk or fat than grades. This is not necessarily true. The grade herd may produce more than the pure-bred. The real purpose of keeping pure-breds is to give the breeder the opportunity to build through his skill and efforts a herd of high production and of good quality and type. A breeder who does not see the necessity of raising the average production of his herd or of keeping it free from disease has not fully comprehended the responsibilities placed upon him.

We have been dazzled by the high prices paid for some exceptional animals and by the phenomenal production of the leading dairy cows of our several breeds. It is well enough to show the possibilities of our dairy cows but we should be more concerned about the average price and production of our good cattle than of our exceptional animals. The breeder must ever bear in mind that he is building and developing more efficient live stock and that it is his duty to keep his herd free from disease or his purpose will be defeated. The late Dr. Henry B. Favill stated clearly and well in one of his addresses the duty of the breeder. We quote as follows from his address:

"The breeder who purchases his pure-bred stock, breeds them, tests them, and develops them, with reference to elevating the whole standard and quality of his herd and farm will succeed and will profit correspondingly by being in the pure-bred ranks. The breeder who buys, breeds, and tests with the sole purpose of making large records, and of being able to sell at sensational prices, is more than liable to fail. The farmer who makes his agricultural operations primary and handles his stock as an essential, but still subordinate part of his operations, will progress. The farmer who, carried away by the glamor of exceptional production and intoxicating publicity, neglects his farm and allows it to be subordinate to his stock interests will retrogress."

The breeder who is carried away with high prices and phenomenal records is likely to fail because he is following speculative ideals rather than ideals which are genuine and sound and fundamental for the building of agriculture and better producing dairy cattle.

Unfavorable Sunflower Experience

For the past two years I have grown sunflowers for ensilage. The result, however, has not proved entirely satisfactory. The first year the sunflowers were cut when about one-third were in bloom, but when the silo was filled a large quantity of "juice" leaked out of the silo. It occurred to me that the sunflowers should be cut later.

The last year the first cutting was of a variety that matured earlier than the Mammoth Russian and was put in silo when quite a lot of the seeds were ripened. We have not yet reached this, so cannot see how this will turn out. The balance of the silo was filled with the Mammoth Russian which did not mature and only about one-third of it was in bloom. This was very "sappy". The cows do not take to it very well at first. We grew about 12 tons to the acre, although one of the neighbors grew nearly 40 tons to the acre.

None of the articles that I have read give information as to what stage the sunflowers should be to give the best results. Can you advise on this? The next season we intend to use one-third clover, one-third oats, and one-third sunflowers as this will be more palatable.

Husum, Wash. D. H. A.

It has not been altogether unusual to have poor results from making sunflower silage, but possibly if we get to know better the necessities for ensiling, we will be able to control our results. There is considerable argument and uncertainty as to just when sunflowers should be cut for silage. This is partly due to the fact that in the sections in which they have been grown to the greatest extent, the growing season is rather short and the sunflowers are seldom matured. In these sections it has been the practice to cut sunflowers for silage when they are about 10 to 25 per cent in bloom.

It is reasonable to expect that a somewhat more nutritious silage would be secured if the sunflowers were allowed to reach a greater maturity, say when 80 per cent of the plants are in bloom and the most advanced heads have developed seed. Where it is possible to do so, it might be well to ensile them when the majority of the seed is in the milk stage and the most advanced seed heads are commencing to get hard. Even at this stage, there will be more juice in the stalks than would seem apparent when they are first cut and before they have passed through the ensilage cutter. From personal experience we should judge that where sunflowers and corn are planted together, the sunflowers will be best for ensiling some two weeks before the corn is ensiled.

Many readers of Hoard's Dairyman have tried this new crop. Others would like to hear of their experience, how they planted, when they cut, and how the cows liked the silage.

Amount of Ice to Cool Milk

How many pounds of ice are required to lower the temperature of 100 lbs. of milk from body temperature reasonably soon after milking to 50°? How much to lower it each 10°? Pound for pound, is ice from a well packed house put in in cold weather better than ice from an ice house filled during a thaw or mild winter weather and poorly packed? Has all ice that is simply frozen water the same cooling value?

Littleton, N. H. G. A. McD.

Because of the varying conditions under which ice is used and stored, it is impractical to give any definite figures. It is generally estimated that in the northern states a supply of about five tons of ice is required for the average sized family. When cream only is to be cooled, allowance should be made at the rate of one-half ton per cow, but if whole milk is to be sold, then the requirement will be approximately one and one-half tons per cow. This allows for reasonable wastage from storing as well as for actual cooling. From forty to fifty cubic feet is required for the storage of one ton of ice, including the packing materials. The experience of most farmers is that it is always better to allow for an ample supply and build a larger house than is necessarily indicated by the present demands.

There are so many factors concerned that it is impractical to discuss as to just the number of pounds of ice required to cool 100 pounds of milk. This is due to the varying temperature that prevails throughout the summer and to the relative efficiency of cooling methods adopted. Where milk is run over a cooler, it will require much less ice than if the attempt is made to cool the same milk in a can immersed in a tank of water and ice. In the latter case there will be the added factor that if the milk is kept agitated it will cool faster than when allowed to stand quietly in the can.

A technical as well as practical discussion of the use of ice is contained in U. S. Department of Agriculture Bulletin No. 744, entitled, "Cooling Milk and Storing and Shipping at Low Temperatures". This bulletin will give information upon the cooling efficiency of various kinds of tanks, how milk can be cooled quickly, and various other information, both of practical nature and also explaining some of the theories of cooling.

We do not have at hand any scientific reinforcement for our opinion, but it has been our observation, as well as that of a large number of others, that ice will vary in its effectiveness as a cooling agent according to the method under which it is frozen. Frequently we secure a soft, snowy ice and this will melt rapidly, whereas the clear, crystal ice produced under ideal conditions will have a larger efficiency.

The question of the storage of ice is not so important as relates to its cooling effect as it is to the wastage of ice while in storage. It is the general impression that artificially frozen ice does not ordinarily last as well or give quite as good results as ice that is naturally frozen. We can see no reason for this and question whether public opinion is correct on this point.

Soiling Crops

What do you consider the best soiling crop to raise for dairy cows in northern Illinois? We aim to feed silage, alfalfa, or clover hay in abundance. We have no pasture, but depend upon soiling for the pasture. We like a variety so as to change the feed often. Have tried oats, Canada field peas, sudan grass, sorghum, sweet corn, and other rapidly growing feeds. Your advice along this line will be appreciated.

San Diego, Calif. J. H. M.

It appears to us that a series of crops something like this comes as near as one can expect to get to a soiling system in this section of the country, which would be considered at all practical. Winter rye alone, or perhaps seeded with winter vetch, would be about the earliest crop that one could expect to soil. There is a period of about two weeks that rye can be soiled successfully, during which cattle will eat it with a relish. Following this would come the first cutting of alfalfa, succeeded by red or alsike clover and peas and oats or oats alone. Sudan grass and millets could be used later in the season, along with the second crop of alfalfa and red clover. This, followed by green corn, would practically complete the cycle of crops that one can use successfully here. Soy beans might also be considered as a crop that should be ready by the first weeks in August.

South's Feed Cache

HOARD'S DAIRYMAN:—Dairy profits in the South are in proportion to the winter cost of feed more than for any other one thing. In fact, the southern dairyman has neglected the winter feeding phase of his business more than any other. This neglect is not because of difficulties, but rather a lack of difficulties. It has resulted in indifference and neglect.

An inventory of the dairy feed situation for this winter is not discouraging, rather the contrary. As usual, however, there is too little succulent feed cached in the silo. The silage will run short before pasture comes in and the flow of milk will drop when that time comes. Until the southern dairyman can put enough feed in his silos to bridge the winter his industry is not permanently founded.

In the sorghum the southern dairyman has a silage asset unsurpassed. When it is planted in alternate rows with corn, the two combined afford the largest per acre contribution of desirable silage, but sorghum alone is an excellent and very economical material. Sorghum should not be cut, however, until its grain is matured. In the lower south, Japanese cane is a source of silage but it is not the equal of sorghum because of its lack of grain.

It has widely become the custom to grow velvet beans in the corn fields. Where this is done, no ensilage is gathered, but a wealth of splendid grazing is afforded throughout the winter. The corn stalks and velvet beans afford both a roughage and a concentrate, the beans carrying high percentages of protein. Though the beans be exposed for two or three months, they do not deteriorate materially. The amount of velvet beans grown this year has evidently increased. For this reason it is expected that there will be larger offerings of velvet bean meal to feeders and that it will follow the trend of cottonseed meal and sell at a lower price than has been asked for the past two years.

In some sections of the South considerable peanuts are grown. The tops make excellent hay. Tests made in Texas reveal that peanut tops make good silage when associated with "blackstrap" molasses—a refuse from the sugar cane mills of Louisiana—or with any carbohydrate material.

As a source of hay, peanut tops run 12% protein, 47% carbohydrates, and 2% fat. In regions of peanut production considerable hay of this nature is baled and put on the market. It is nearly on a par with alfalfa. Unless care is observed in handling peanut hay it will carry a good deal of dirt taken up on roots.

All the crops that the dairyman has grown last year are expensive crops, made so chiefly by the high cost of labor. This being true, it is thought that the trend of southern dairy products is not so likely to decline materially during the winter. If this holds true, the southern dairyman will be able to clean up the big burden of cost represented by the contents of the silo and feed loft. If it does not, then the dairyman who has not looked well to an economical production of winter feeds will be up against a very trying situation.

Georgia. C. A. WHITTLE.

Grass Seed for Drained Land

Please advise me what kind of grass seed would stand the most wet. I got about three-fourths of an acre drained into a hill of gravel. Grain or corn will drown out.

Hartford, Wis. M. M.

Undoubtedly the best thing to do with this piece of land is to get it into a grass sod of some kind. Assuming that it has been drained sufficiently so that water will not cover it for any length of time, it should be a fairly easy matter to seed it down to a mixture of redtop and Kentucky blue grass. The former grass will do well on low moist lands and if it is not too wet the Kentucky blue grass will maintain itself when once established.

If it is possible to get this piece plowed and a seed bed prepared, we would advise seeding it to winter rye next fall, seeding with it about 15 lbs. of redtop grass, 10 lbs. of Kentucky blue grass, and about 5 lbs. of timothy. This should be a sufficient amount to sod it over in good shape. We are suggesting the timothy because this grass grows so much faster than the others in establishing itself. Redtop and blue grass seeds may be purchased from any reliable seed house.

Seed Corn to Grow

Kindly inform me where I can obtain the best quality of seed corn for ensilage purposes to be grown in Waukesha County, Wisconsin. I would also like to know what quantity should be sowed per acre for a good stand. I am figuring on planting 8 to 10 acres for a silo 16x40. Heretofore we have planted the ordinary yellow or white corn but the results have not been at all satisfactory in quantity.

Chicago, Ill. C. J. M.

Our inquirer states that the ordinary white and yellow corns have not done well in Waukesha County. We do not know to what special varieties he refers, but we know of nothing better than either the Silver King, Wisconsin No. 7; the Golden Glow, Wisconsin No. 12, for this county, the former being a white corn and the latter, a yellow variety. These are two of the most popular varieties grown in this part of the state and both are considered very excellent yielders under normal soil and seasonal conditions. If planting for ensilage purposes, we would advise planting about eight to ten pounds of seed per acre.

Keeping Sand Out of Well

HOARD'S DAIRYMAN:—We have lots of quicksand in the West and heavy pumping will attract all there is. If there is any coarse material at all present galvanized curbing punched from the inside with a cold chisel arrests it and jackets the curb on the outside so that quicksand ceases to enter. In California they sink curbs to big depths and then with a special machine puncture them from the inside. However, all that is necessary is to have the curbing punched whilst in the flat sheet with an inch or inch and a half cold chisel at intervals of two inches each way, then round into a curb and place in the well. A sack of charcoal weighted down with coarse gravel can be placed in the bottom. Some quicksand will enter for a time but this can be removed with a valve bucket if necessary. As a rule, however, the pump will care for the small quantity that can enter.

Colorado. L. OGILVY.

Kalamazoo Silos erected thirty (30) years ago are still on the job keeping ensilage and are just as good as when erected. More than 70,000 farmers can testify to Kalamazoo reliability. The keeping quality of your ensilage depends upon how well the air is kept out of it.

Kalamazoo Silos are guaranteed air-tight. The construction is such that air cannot enter thru the walls. This means a big *saving* and a *finer quality* of ensilage.

Kalamazoo

TILE AND WOOD SILOS

"The World's Standard"

Glazed Tile Silos Walls built of absolutely moisture proof, glazed tile. Positively weather tight. Blocks with three "dead air" spaces and keyed into cement, make strongest, air-tight joint, a wall that resists heat and cold. Protects ensilage from frost and moisture. Needs no paint, no repairs. Will not burn, decay, collapse, twist or blow down. Lasts a century.

Wood Stave Silos Most enduring wood known, air-tight joints deeply grooved, tongued and splined. Shipped ready to erect. No nails, no screws. Anyone can do the work. Great ensilage savers.

1921 Farm Profits will depend on your Silo. Let the KALAMAZOO pay for itself. Order *your* Silo now. 2112-S

Association Notes

Petaluma, California:—There are only three herds out of 36 that have not pure-bred bulls. The average pounds butterfat per cow per day for December was 1.07. The herd with the highest average has grown from 1.24 in September to 1.61 pounds in December.

Effingham County, Illinois:—One pure-bred cow and two pure-bred bulls were purchased during the month of January. Market milk testing 3.5% sold for $2.35 per cwt. and 4c per point above. Local feed prices are: Corn, 75c per bushel; oats, 55c; bran, $1.85 per cwt.; cottonseed meal, $2; oil meal, $3; Purina Cow Chow, $3; alfalfa, $28 per ton; clover, $25; silage, $5.

This is the end of the Effingham association year. During the year 19 unprofitable cows have been disposed of and 38 head of pure-bred cattle purchased. Bernard Kralman owns the highest averaging herd for the year, with an average of 362 lbs. fat for five cows. Wente Bros. own the highest producing cow, which made a record of 11,769 lbs. milk containing 471 lbs. fat.

Macoupin County, Illinois:—Excellent results have been obtained by feeding properly balanced rations and by more regular milking. Several members are getting good results from sunflower silage. Seven of the 55 honor cows this month produced over 60 lbs. butterfat and 21 produced over 50 lbs. December market milk testing 3.5% sold for $3.15 per cwt. and 5c per point above. Milk retails for 14—16c per quart. Feed prices are: Corn, 90c per bu.; oats, 65c; hominy feed, $1.90 per cwt.; oil meal, $3; cottonseed meal, $2.50; malt, $3.30; Purina Cow Chow, $3.40; molasses feed, $2.50; clover hay, $27 per ton; alfalfa hay, $30; corn silage, $7.

Elkhorn—East Troy, Wisconsin:—A new member of this association, who was formerly a member of another association, states that he now sees his mistake in having given up testing, as his herd is now run down as a result of selling his best cows thinking they were not the best. During December six cows were sold as unprofitable and two registered Holsteins were bought into the association. Fourteen members operate milking machines and ten own lighting plants. The local prices for feeds are: Vitex, $62 per ton; gluten feed, $47; Unicorn, $52; oil meal, $55; bran, $33; oats, $32; ground corn, $33; mixed clover and alfalfa hay, $24; corn silage, $6.

Branch and Hillsdale Counties, Michigan:—The third year of this association has just been completed with the following results: In 24 herds 310 cows started the year. Of these 58 were sold, 32 of which were "boarders", and 3 died; 38 cows were bought. The members have learned the value of pure-bred sires, for there are 17 registered bulls and only two grades in the association. Four of the registered sires were bought this year. Six cows produced over 400 lbs. of butterfat during the year and 72 cows produced more than 300 lbs. The highest yearly butterfat record was made by a grade Jersey owned by Roy Strang which produced 7,783 lbs. of milk containing 460.1 lbs. fat. The highest milk record was made by a grade Holstein owned by H. J. Lindsey, 11,702 lbs. of milk containing 423.9 lbs. fat being produced by this cow.

First Portage, Ohio:—January was the best month during the testing year for high records and honor roll cows. Not much improvement on feeding has been noticed since September. Two unprofitable cows were butchered during the month. December market milk testing 3.5% sold for $3.40 per cwt. and 5c per point above. Milk retails for 14c per quart and butter for 50c per pound. Prices paid for feed are: Oil meal, $2.40 per cwt.; cottonseed meal, $2.05; bran, $2; middlings, $2.70; gluten, $2.70; chop, $1.40; hay, $20 per ton; corn fodder, $7; silage, $8.

North Branch, Pennsylvania:—Several members are improving their barns by the addition of stanchions and drinking cups. About five herds have been slaughtered or greatly diminished in the county during the year as a result of tuberculosis and dairymen are beginning to understand why ventilation and sanitation are important in checking this disease. Three per cent market milk in December sold for $3.60 per cwt. and 4c per point above. Milk retails for 13c per quart; butter for 67c per pound and cheese for 37c per pound. Feed prices are: Mixed hay (farm price), $20 per ton; alfalfa, $30; corn silage, $8; corn stover, $8; root crops, $8; cottonseed meal 43%, $70; linseed meal, $62; corn and cob meal, $24; ground oats, $35.20.

West Branch, Pennsylvania:—Two members have made application for accredited herds. One unprofitable cow was slaughtered and one sold during December. Through better feeding and management, one member has increased the production of five of his cows from below 700 lbs. of milk to above 1,000 lbs. per month. Four per cent market milk sold for $2.50 per cwt. and 4c per point above. Feed

prices are: Cottonseed meal, $3.25 per cwt.; linseed oil meal, $3.25; wheat bran, $2.30; corn and cob meal, $1.30; ground oats, $1.70; gluten feed, $3.75; mixed hay, $24 per ton; corn stover, $7; corn silage, $6.

Dallas County, Iowa:—A registered Holstein bull was purchased during January, and one cow sold for beef. Market milk sold for $3.30 per cwt., 3.5% test being required and 5c paid for each point above. Feeds sold as follows: alfalfa, $25 per ton; clover, $20; silage, $8; corn and cob meal, $13; ground oats, $25; bran, $40; oil meal, $47; cottonseed meal, $50.

Orleans, Indiana:—One member has increased his butterfat production 44% by feeding a balanced ration. Four per cent milk sold for $4 per cwt. in January. Milk retailed for 12c per quart and butter for 35c per pound. Feed prices are: cottonseed meal, $36 per ton; corn, $21; oats, $33; bran, $40; alfalfa, $28; clover, $25; timothy, $21.

Unity, Wisconsin:—Satisfactory balanced rations have been worked out with the members and all have proved their value when used for a few months. One car of mixed feeds was bought by members. The association is now about 80 per cent in the use of pure-bred bulls. Three herds have been tested for tuberculosis. Thirteen unprofitable cows were weeded out during January. The members have purchased a soil testing outfit for the association. The association slogan is rubber-stamped on all its correspondence, and each member is given a poster for his farm entrance indicating that he is a member of a cow testing association. The tester reports that their efforts are united to make al possible progress in dairying. During January market milk sold for $2.30 per cwt. and the cheese factory paid 51c per pound for fat. Milk retails for 10c per quart and cheese for 36c per pound. Feed prices are: gluten, $55 per ton; oil meal, $50; bran, $34; oats, $29; barley, $39; corn, $30; Wisconsin Balanced Ration, $46—$50; hay, $12; silage, $6.

Richland County, Wisconsin:—Twenty unprofitable cows were sold for beef during January. Market milk testing 3.5% sold for $2 per cwt. The condensery paid 47c per pound for fat and the creamery paid 49c per pound. Milk retails for 11c per quart, butter for 52c per pound, and cheese for 24c per pound. Feed prices are: oil meal, $60 per ton; bran, $36; oats, $35; barley, $40; Schumacher, $45; silage, $6; alfalfa, $25; clover and mixed hay, $18; prairie hay, $15.

Fort Atkinson, Wisconsin:—January condensery milk sold for $2 per cwt., a test of 3.5% being required and 4c paid for each point above. The creamery paid 57—66c per pound for fat. Local feed prices are: silage, $6 per ton; clover hay, $22; alfalfa, $26; corn, $23—26; bran, $32; cottonseed meal, $45; oil meal, $50; brewers grain, $56; oats, 54—60c per bushel.

De Kalb County, Illinois:—Eighteen boarder cows were sold during January. Market milk testing 3.5% sold for $2.50 per cwt. and 4c per point above. Prices for feeds were: bran, $38 per ton; oil meal, $50; cottonseed meal, $50; gluten, $50; oats, 43c per bushel; corn, 58c; barley, 70c; alfalfa, $30 per ton; clover, $25.

Lake County, Illinois:—One member saved $70 during January by changing from prepared feeds to home grown feeds balanced with oil meal, cottonseed meal, and bran. Several others have changed to good advantage and with as high production. Two carloads of Holsteins were bought in Wisconsin, one load being of pure-breds. About one-half of these will remain in the association. One farm installed drinking cups and one has put concrete in the barnyard. Three members did seven-day work with very creditable results. Dairymen received $2.50 per cwt. for 3.5% market milk and 4c per point above. The creamery paid 48c per pound for fat. Feeds are bought at the following prices; silage, $8 per ton; alfalfa, $24—$28; mixed hay, $20—$24; stover, $6; bundle corn, $8; ground oats, $30; corn and cob meal, $20; wheat bran, $34; cottonseed meal, $42; oil meal, $50.

First Kane County, Illinois:—One car of feed was purchased co-operatively during January. The average fat production for the association is 1.3 lbs. per cow greater than in December. January 3.5% market milk sold for $2.50 per cwt. and 4c per point above this test.

Good Gains Through Testing

James R. Warren reports that the Kane County No. 2 Testing Association of Illinois has closed its year's work with a grade Holstein owned by Fred Read returning $2.32 for each dollar's worth of feed consumed. Two other Holsteins returned $2.29 and $2.24. The high herd in the association averaged 8,890 pounds of milk and made a profit of $160.35. In Bert Lakin's herd three years of testing has shown an improvement in the average production of 3,627 pounds of milk and 132 pounds of fat. There has been an increase in the return above feed cost of $101.04. In Henry Lee's herd there is an increase in the second year of testing over the first year of 3,478 pounds of milk containing 155 pounds of fat. In the Anderson and Carlson herd a grade Holstein, purchased from a dealer as a "canner", gave 14,722 pounds of milk containing 558.4 pounds of fat in her second year's testing.

An unusual record by a grade Jersey cow, "Dell", owned by Miss Juliet Hollard, is reported by L. Rasmussen, tester in the Madison County No. 1 Association of Illinois. Last year this grade produced 13,288 lbs. milk, 608.76 lbs. fat. In 1919 her record was only 6,095 lbs. milk, 327.88 lbs. fat. She was not regarded as a cow of special worth and her owner considered disposing of her to prevent her pulling down the average of the herd. With a ration suited to her needs, she has made so good a production in 1920 as to have a high rank in the herd. She was purchased with her calf for $90, but would not now be sold for very much more than that. Mr. Rasmussen says of the herd of Miss Hollard, "The Jerseys are housed in an up-to-date barn with steel stanchions, water-cups, cork brick platforms, box stalls, and so on. Miss Hollard takes a loving care of her little herd, does all the work, including the milking, herself, she believes in knowing what she is doing with her cows and dairy and therefore she tests. It is a pleasant task for a cow tester to work at a place where ideas are easy and intelligently transformed into practical results."

Through the work of the class in agriculture in the Winfield high school of Kansas, a high quality Holstein cow has been discovered and developed. The boys in this class help with the testing and record keeping in the Cowley County Testing Association. The records convinced Mr. J. C. Dulaney of the high productive worth of his pure-bred Holstein cow, Walpurga Fairview Girl Caseholm, a senior four-year-old which he has lately put on seven-day test. In this period she has produced 22.936 lbs. butterfat. This is the first official seven-day record completed in the county.

Some Farm Hands Do the Work of Two

—So Do Some Farm Tools

Once in a while you hire a man who's worth two or three ordinary men to you. If you've got that kind of a man this spring, hold on to him.

Farm implements perform in the same way. Two machines of different makes may cost about the same. But one fails you in an emergency, and the other performs beyond what you expect—does the work of two.

The E-B Line of farm machinery has proved its reliability during its 69 years of service. The experience of farmers everywhere backs up this reputation — whether with E-B horse-drawn or power-driven tools.

The E-B dealer will give you reliable help in buying the right equipment for your needs. Then he'll give you the service that will keep that equipment in use 365 days in the year if necessary.

Barn of
Mr. C. G. McConnell
Ripon, Wis.

A generation from now this same Asbestos Roof will be on duty

IN TWENTY YEARS, a barn roof ordinarily sees a good deal of patching, painting, repairing and often entire replacement. But not so if the roofing is Johns-Manville Asbestos, like that shown in the picture. For you can trust a Johns-Manville Asbestos Roof to protect your live stock and your crops for years without failing in its duty. Impervious to seasonal changes—snow, sleet, wet spells or blood-heat dry spells—Johns-Manville Asbestos Roofing remains unchanged and unimpaired.

Out of the tons of Johns-Manville Asbestos Rock mined by us every day, only the best is selected for Johns-Manville Asbestos Roofing.

Why it is permanent

This absolute imperviousness of Asbestos Roofing to time and weather is due to the marvelous properties of asbestos rock, from which it is made. Imagine blasting this mineral from the earth where it has lain for centuries, separating it into millions of silken fibres and felting these fibres together with natural asphalts into flexible roofing. That is what Johns-Manville Asbestos Roofing is. So you see that since Johns-Manville Asbestos Roofing is virtually flexible stone, it is naturally permanent. It can never rot or disintegrate. Nor does it ever need painting any more than the boulders in the field. Asbestos is its own protection.

Everybody knows it is firesafe

In fact, that is the first thing anybody thinks of in connection with asbestos. And it is a pretty satisfying thought to know that your barn is safe from a roof-communicated fire for all time. The Underwriters' Laboratories, Inc., whose business it is to rate fire-risk, give to Johns-Manville Asbestos Roofing the highest classification.

Look upon us as Roofing Advisers

—rather than manufacturers. It is Johns-Manville's honest intention to give the buyer of roofing the most durable and at the same time the most economical roofing possible.

We also make rag felt roofing (the type generally but incorrectly called rubber roofing). So when we advise Asbestos Roofings, it's not from any personal bias, but because of our firm conviction of the superiority of Asbestos.

Your Johns-Manville Asbestos Roofing may be registered with us. Thus we can keep tabs on its service on your building. That is your assurance that it will give the service claimed for it.

Johns-Manville Roofings

Johns-Manville Asbestos Shingles, Colorblende Asbestos Shingles, Asbestos Built-Up Roofing for flat roofs, Asbestos Ready to Lay Roofing in roll form, Asbestos Corrugated Roofing.

Articles of Incorporation by the Oregon Dairymen's By-Products Corporation

We, the undersigned, all of whom are citizens and residents of the state of Oregon, have this day voluntarily associated ourselves together for the purpose of forming a corporation under the laws of the state of Oregon.

First. The name of the corporation shall be Oregon Dairymen's By-Products Corporation.

Second. The purposes for which said Corporation is formed are:

(a) To pack, process, can, manufacture, store, warehouse, handle, and market any milk or milk products by any means and in any way whatsoever.

(b) To pack, process, can, manufacture, handle, and sell all kinds of agricultural products, both for its own account and on commission for others, and to contract accordingly; to acquire, buy, lease, and operate warehouses, factories, ice plants, cold storage plants, creameries, condenseries, and any other plants, wherever necessary or expedient in order to process, can, manufacture, handle, store or dispose of any milk or milk products; to purchase, acquire, own, hold, lease, and control any real and personal property necessary or convenient for the transaction of the business of the corporation; to lend money upon and to negotiate loans upon such agricultural products; to borrow money; and to establish domestic and foreign agencies to carry on the general purposes of the corporation.

(c) To buy or otherwise acquire, and to own, operate, mortgage, lease, sell, or otherwise dispose of, any and all kinds of property, real, personal, or mixed, or any interest therein, or to any extent, and to contract for the purchase, sale, disposal, lease, or rental of any such property, for the purpose of furthering any of the aims of this corporation.

(d) To acquire, hold, guarantee the payment of, pledge or otherwise contract with reference to, or to sell or otherwise dispose of, shares, bonds, obligations, or other securities of this corporation or of any other corporation, firm, or individual.

(e) To contribute in any manner to the expense of promoting, constructing, acquiring, improving, or maintaining any work or enterprise by whomsoever owned, within the general purposes of this corporaton.

(f) To make contracts of any kind relating to any of the said property or business, in either an independent or representative capacity.

(g) To promote, do, acquire, hold, and dispose of anything incident to, or necessary, convenient, or proper to carry out any of the things or purposes aforesaid or which from time to time may be declared by the Board of Directors of this corporation then in office to be necessary, useful, incidental, or auxiliary to accomplish any of the purposes of the corporation or to promote its welfare.

(h) The primary purpose for the organization of this corporation is to process, manufacture, store, warehouse, and handle the milk and milk products delivered to it by the Oregon Dairymen's Co-operative League, under an agreement whereby this corporation shall process, manufacture, warehouse, store, deliver, and market, if required, the milk and milk products delivered to it by the said Oregon Dairymen's Co-operative League on a non-profit basis, as far as the law will permit and will receive for such services only the actual costs of such operations and an amount, apportioned over the entire operations of any one season, sufficient to pay the dividend on the then issued preferred capital stock and an amount sufficient to retire in each of the five calendar years beginning with 1921, one-fifth of the entire issued preferred stock of the corporation or one class thereof, and sufficient amounts for taxes, insurance, depreciation, betterment, and for proper reserves for advertising, general commercial hazards, development, work, and other secondary charges.

It is contemplated that under such agreement all of the above charges shall be charges against the cost of operations of this corporation, excepting the amounts required to pay the dividends on capital stock as aforesaid; and after such payments all operations of this corporation, except operations, if any, as a public warehouse or as an ice or cold storage plant, shall be without profit.

(i) To conduct public warehouses and cold storage plants under and according to the statutes of the state of Oregon and in compliance with all of the state or federal rules or regulations.

(j) To do any one or more of said things in any part of the world.

Third. The principal office and place of business of this corporation shall be at the city of Portland, Multnomah County, state of Oregon, but offices and plants may be established elsewhere by the corporation.

Fourth. The term of the duration of this corporation shall be for fifty (50) years from and after date of incorporation.

Fifth. The capital stock of this corporation shall be $502,500.

Sixth. The amount of capital stock of said corporation shall be $502.000. and number of shares into which it is divided shall be 50,250 shares, of the par value of $10 each, of which 50,000 shares shall be preferred capital stock, and 250 shares shall be common capital stock, all shares being of the par value of $10 per share.

The said preferred stock shall receive annually, out of the profits of the corporation, a dividend of seven per cent (7%) per annum, payable upon all outstanding shares of preferred stock, before any dividends whatsoever shall be declared or paid upon the common stock or any thereof of the corporation. The said 7% dividend shall be cumulative; that is, if the full amount of 7% per annum shall not be paid to the holders of the outstanding shares of preferred stock in any one year out of the profits of the corporation, then the unpaid portion of the said 7% dividend shall be paid out of the profits of the corporation for succeeding years until the full amount of the dividend of 7% per annum on all outstanding shares of preferred stock shall have been paid. And no dividend whatsoever shall be declared upon the shares of common stock unless and until every annual 7% dividend upon all outstanding shares of preferred stock shall have been theretofore paid in full.

The said preferred stock or any or all outstanding shares thereof may be retired, at any time by the corporation, at its option, by order of its Board of Directors, upon payment in cash of the par value thereof, plus accumulated dividends, if any, including the proportionate dividend for the fraction of any year, and a bonus of 2% of the said par value.

The said preferred stock shall be divided into five classes known as "A", "B", "C", "D", and "E".

There shall be 10,000 shares of each class of preferred stock and all of the conditions and preferences thereon shall be the same, excepting as to retirement.

All of the outstanding shares of the class "A" preferred stock must be retired by the corporation by payment in cash of the par value thereof, plus cumulative dividends, if any, including the proportionate dividend for the fraction of the year, and a bonus of 2% of the said par value, at some time, in the discretion of the Board of Directors, during December, 1921. No preferred stock of class "A" shall ever be issued by this corporation after the calendar year 1921.

All of the outstanding shares of the class "B" preferred stock must be retired by the corporation by payments in cash of the par value thereof, plus cumulative dividends, if any, including the proportionate dividend for the fraction of the year, and a bonus of 2% of the said par value, at some time in the discretion of the Board of Directors, during December, 1922. No preferred stock of class "B" shall ever be issued by this corporation after the calendar year 1922.

All of the outstanding shares of the class "C" preferred stock must be retired by the corporation by payment in cash of the par value thereof, plus cumulative dividends, if any, including the proportionate dividend for the fraction of the year, and a bonus of 2% of the said par value, at some time, in the discretion of the Board of Directors, during December, 1923. No preferred stock of class "C" shall ever be issued by this corporation after the calendar year 1923.

All of the outstanding shares of the class "D" preferred stock must be retired by the corporation by payment in cash of the par value thereof, plus cumulative dividends, if any, including the proprotionate dividend for the fraction of the year, and a bonus of 2% of the said par value, at some time, in the discretion of the Board of Directors, during December, 1924. No preferred stock of class "D" shall ever be issued by this corporation after the calendar year 1924.

All of the outstanding shares of the class "E" preferred stock must be retired by the corporation by payment in cash of the par value thereof, plus cumulative dividends, if any, including the proportionate dividend for the fraction of the year, and a bonus of 2% of the said par value, at some time, in the discretion of the Board of Directors, during December, 1925. No preferred stock of class "E" shall ever be issued by this corporation after the calendar year 1925.

The corporation shall issue the various classes of the said preferred stock in as nearly equal amounts as, in the discretion of the Board of Directors, may be advisable.

The shares of common capital stock shall each have one vote but the preferred capital stock shall have no voting power whatsoever; and the owners thereof shall be entitled to participate in the meetings of the stockholders of the corporation but shall not be able to vote on any matters there introduced; excepting that if the corporation fails to pay any annual dividend on the preferred stock and such default shall continue for a period of six months or more, the preferred stock shall acquire and have full voting power and the holders thereof shall be entitled to vote at any and all meetings of stockholders on all propositions on the basis of one vote for every share.

All the common capital stock shall be issued to the League, as such, in consideration of the contract referred to in paragraph second (h), or of cash and the League shall there-

by control the corporation and elect the directors, officers, and managers thereof.

Single shares of stock shall be placed in the names of individuals to qualify them as stockholders for the purpose of acting as directors of the corporation; but all such certificates must be endorsed back to the League and be returned to the possession thereof.

In the event of a dissolution of the corporation or any division of its net assets, nothing shall be distributed to the holders of the common capital stock until the holders of each and every outstanding share of the preferred stock shall have received the full par value of his said shares of preferred stock, together with accumulated dividends, if any; and thereafter the balance of the net assets shall be proportionately distributed among the holders of the common capital stock.

Seventh. The corporation, through its Board of Directors, shall have the right to purchase any or all of the shares of preferred stock of any stockholder at $10.20 per share, plus proportionate dividend, whenever, in the judgment of the said Board, it is advisable so to do for the general good of the corporation.

Eighth. The gist of paragraphs sixth and seventh shall be printed on the face of all certificates of stock of the corporation.

In Witness Whereof, we have hereunto set our hands, in triplicate this 26th day of May, 1920.

In the presence of
ALBERT S. HALL,
C. DOUGLAS TYLER.

ALMA D. KATZ,
F. W. BOESEL,
J. W. POMEROY.

By-Laws of Oregon Dairymen's By-Products Corporation

ARTICLE I

The purposes for which this corporation is formed are set forth in the second paragraph of the Articles of Incorporation thereof.

ARTICLE II

The corporate seal shall consist of a circle, having on its circumference the words: "Oregon Dairymen's By-Products Corporation, Incorporated 1920, Oregon".

ARTCLE III

Board of Directors

Section 1. Number. The corporation powers, business and property of the corporation shall be exercised, conducted, and controlled by a Board of Directors of twenty-five (25) members.

Sec. 2. Election. The directors shall be elected annually at the regular annual meeting of the stockholders from the stockholders of the corporation and shall hold office until their successors shall have been elected and shall have accepted office.

Sec. 3. Vacancies. Vacancies in the Board of Directors shall be filled by the other directors in office; and such new directors shall hold office until the election of their successors by the stockholders.

Any director who ceases to be a stockholder shall cease to be a member of the Board as soon as a majority thereof pass a resolution to such effect.

Sec. 4. First Meeting of Directors. Immediately after each election of directors, the newly elected directors shall hold a regular meeting and organize by the election of a president, vice-president, a secretary (treasurer), and transact any other business. Notice of such meeting is hereby dispensed with.

Each director must, at the first meeting after his election, cause his address to be entered in the minutes, to which all notices may be directed until another similar notice and entry of residence has by him been given in writing to the secretary who shall register the same. Such service of notice shall at the next meeting thereafter be noted on the minutes of the corporation, and said minutes, upon being read and approved at a subsequent meeting of the Board, shall be conclusive upon the question of service of notice.

Sec. 5. Regular Meetings. In addition to the first meeting mentioned above, a regular meeting of the Board of Directors shall be held quarterly at such time and place as the Board may determine.

Sec. 6. Notice of Regular Meeting of Directors. Notice of the regular meetings of the directors shall be mailed to each director at his last known address at least three (3) days prior to the time of such meeting.

Sec. 7 Special Meetings. A special meeting of the Board of Directors shall be held whenever called by the president or by a majority of the directors. Any and all business may be transacted at a special meeting. Each call for a special meeting shall be in writing, signed by the person or persons making the same addressed and delivered to the secretary, and shall state the time and place of such meeting.

Sec. 8. Notice of Special Meeting. Notice of each special meeting of the directors shall be mailed to each director, at his last known address at least 3 days prior to the time of such meeting.

Sec. 9. Quorum. Thirteen directors shall constitute a quorum of the Board at all meetings.

Sec. 10. Compensation. The directors shall receive no compensation for their services as directors other than reimbursement for railroad fares actually expended by them in attending the meetings of the Board of Directors, and any other necessary traveling expenses.

The directors may, in their discretion, provide reasonable compensation for the members of the executive committee of the Board.

ARTICLE IV

Power of Directors

The directors shall have the power:

1. To conduct, manage, and control the affairs and business of the corporation; and to make rules and regulations for the guidance of the officers and management of its affairs.

2. To appoint and remove, at pleasure, all officers, agents, and employees of the corporation, prescribe their duties, fix their compensation, and require from them, if advisable, security for faithful service.

3. To call special meetings of the stockholders when they deem it necessary; and they must call a meeting at any time upon the written request of one-third of the stockholders.

4. To select one or more banks to act as depositaries of the funds of the corporation and to determine the manner of receiving, depositing, withdrawing, and disbursing the funds of the corporation and the form of checks and the person or persons by whom same shall be signed, with the power to change such banks and the person or persons signing said checks and the form thereof at will.

5. To incur indebtedness for the conduct of the business.

6. In addition to the powers expressly conferred herein the Board may exercise such powers and do such lawful acts and things as in its judgment may be necessary or expedient for carrying out any of the corporate purposes.

ARTICLE V

Duties of Directors

It shall be the duty of the Board of Directors:

1. To keep a complete record of all its acts

(Continued on page 198)

Slipping tires are worse than useless — they are wasteful. They waste power, waste gasoline and waste time.

Caterpillar tires don't slip. They are unequaled in traction power by any truck tire except the big pneumatics and are more dependable than pneumatics because they are not subject to blowouts and punctures.

They cost considerably less than pneumatics and give so much more mileage than either pneumatics or ordinary solids that their purchase is a real economy.

Made in sizes suitable for trucks of all types and weights.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome, immoral, and quack medical advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Coming Events

Feb. 22-25—Stockmen's Week, University Farm Davis, California.

Butter Markets Badly Shaken During Past Week

[Report by U. S. Bureau of Markets.]

Conditions in the butter markets were exceptionally bad during the week ending February 5. Eastern markets, particularly New York, were extremely weak and suffered sharp and almost daily price declines. Chicago alone, because of lower existing prices and light supplies of butter, offered some resistance to the general depression.

Storage butter suffered most from the market weakness. While the withdrawals have been fair there has been comparatively little sale of storage on the open market, buyers in many cases having turned to fresh butter. Prices have shrunken badly, both on spot and future sales. The best storage centralized sold as low as 39c at Chicago Friday. Some warehouse auction selling at Chicago was reported at 31c to 33c.

The greater weakness in the East was caused by the surplus of the foreign butter arriving at New York. Danish butter from the cargo of the steamer Frederick VIII which arrived the previous week proved to be of excellent quality and many buyers took it in preference to domestic so long as it could be purchased at or below domestic prices. This caused such a backing up of regular arrivals that receivers simply had to drop prices to a point where Danish competition would be cut.

Further Danish Shipments Expected

The steamers Sartartia and Homor City arrived during the past ten days with cargoes totaling about 1,000 casks and 1,900 boxes of Danish butter. The Drottingholm was reported in Friday with a cargo approximately 4,300 casks. The steamer, United States, was expected to sail from Copenhagen on Friday with a heavy cargo on board. Some of this butter will cost 42c C. I. F., and further offerings were reported during the week down to 42½c C. I. F., duty paid for future delivery. Receipts of about 1,000 boxes of Argentine were reported at Boston and more is rumored to have arrived at New York during the week.

The average wholesale prices on 92-score butter at five of the principal markets for the week ending Feb. 5, 1921, and corresponding week last year, were as follows:

	Week ending Feb. 5 1921	1920
	Cents	Cents
New York	47.5	66.6
Chicago	45.6	61.6
Philadelphia	47.6	67.5
Boston	48.3	64.8
San Francisco	39.2	63.2

The receipts of butter at these markets were 7,701,510 lbs. as compared with 6,104,374 lbs. last year and 7,364,386 lbs. for last week.

Wisconsin Farm Bureau

Over five hundred farmers attended the first annual meeting of the Wisconsin Farm Bureau Federation at Madison on February 2nd. Although only seven counties were then permanently organized, reports showed temporary organizations in several others and that by early next summer the membership will be not less than 20,000 with further organization work to be done.

Plans were laid to further expand both the organization work and the activities of the association. Particular stress this year will be placed upon marketing problems, with aid to be given in the federation of cheese factories and creameries, in the promotion of milk producers' associations, and in assisting to advance co-operative marketing for growers of canning crops, sugar beets, and tobacco.

The officers elected for the ensuing year are: Geo. McKerrow, president; Jas. H. Murphy, vice-president; C. J. Schroeder, secretary; and C. W. Keys, treasurer. The following resolutions were adopted:

1. We are grateful that this truly representative, American, and strongly financed farm bureau movement has come to our state and that Wisconsin farmers have so wisely welcomed it. We believe that through this organization we may so meet our common problems in a personal, state, and national way that we can come to a better understanding and finally solve our many difficulties. We believe that this organization, with a national membership of over a million farmers and its officers so directly representative, can and does speak, for the first time with authority for the farmers of America.

2. We favor the organization of farm marketing organizations on a commodity basis in individual communities and the federation of these into district, state, and national organizations in-so-far as practical. We believe that through this system of marketing we may best improve the quality of our products, standardize our grades, and benefit both producer and consumer without injury to any distributing or manufacturing agency that fills a real need and performs a real service to the community at large. We believe that by these means we may save the speculative profits which have heretofore harmed both producer and consumer, and that we can so organize our industry as to largely eliminate the disastrous periods of surplus and shortage.

3. As the main industry of Wisconsin is dairy farming, we believe one of our first projects should be to give all support possible to the expansion of the Wisconsin Cheese Producers' Federation, to encourage the federation of creameries for the better standardization of marketing of butter, and to aid and advance the formation of milk producers' association of the proper kind. We believe that the producers of milk, whether their market be whole milk or one of the various manufactured products, should be so organized that they can sell their product collectively and in such manner that they may find the best market and secure the assurance of correct tests and weights. What has been said of dairy products applies in like measure to canning crops, sugar beets, tobacco, potatoes, and other crops in which a number of Wisconsin farmers are interested.

4. Other states are investigating the practicability of the establishment of market and weather reports by wireless direct to farmers and we therefore request our State University to also investigate this problem and see if some practical system cannot be evolved.

5. We extend to our retiring president, Mr. Geo. W. Hull, our thanks for his able, sincere, and enthusiastic services during the formative period of our growth. From the inception of the movement in Rock County a year ago he has carried the gospel of the farm bureau into practically every county of the state and we regret that other duties require that he now cease the work so well begun. Our felicitations and gratitude will be with him through all the years of his life.

6. Inasmuch as co-operative associations in Wisconsin have had and are having difficulty in purchasing and selling supplies because of opposition by certain interests with which they may come in conflict, we request our state legislature to take such action as will eliminate such discriminating practices and so place these co-operatives on a like basis with their competitors.

Bank Gives Bulls Free to Patrons

HOARD'S DAIRYMAN: — The City Bank of Hobart, Oklahoma, gave away a high class Jersey bull and a registered Shorthorn bull of good blood lines to their customers on January 27. About 300 people were present at the meeting and nearly everyone had a handful of tickets with numbers on them each representing one chance on one of the bulls. The lucky man in the case of the Jersey was Geo. Neal. R. E. McLain drew the Shorthorn.

Kiowa County, Oklahoma, has been largely a cotton and grain farming section for many years and the bankers have seen too many lean years to believe in the one crop system. About a year ago D. S. Wolfinger, president of the City Bank of Hobart, took the lead in the promotion of more and better live stock. He purchased a good beef bull and a good dairy bull of the predominating breeds in the county and sent out notices to all his customers that these bulls would be given away a year later. One chance on either of the bulls was given by the bank to anyone for each payment of fifty dollars on a note or each fifty dollar deposit made. Provisions were made requiring that a person must be in the trade territory of the bank and live in the country before being eligible for chances. We have no figures showing their increased business due to this activity but their business among the farmers must have been enormous as they had a large sized washtub heaped full of stubs from the tickets issued.

It was a big day in Hobart. The farmers began coming in very early and by 9:30 the streets were filled with men who had brought ropes and halters prepared to lead their bulls home. At ten o'clock everyone assembled at he auditorium where Mr. Wolfinger explained the rules of the contest and also spoke on the attitude the City Bank had taken toward the development of that community. F. W. Atkeson of the Southwest Jersey Cattle Breeders' Association then discussed the pedigree of the Jersey bull and spoke on the use of better bulls in the development of dairy communities.

Then—the fun began. All the ticket stubs were placed in a large tub on the stage in plain view of everyone. A boy was blindfolded and he was instructed to pick up a ticket. Talk about excitement; it was worse than Saturday night at a tent show when the diamond ring is given away. The judges of the contest read the number —3730—absolute quiet reigned while everybody read their tickets in feverish haste. Finally someone said "Here!" and Geo. Neal had won the Jersey bull. Mr. Neal already had one heifer calf sired by the new bull so he is well on the road to becoming a Jersey breeder. The Jersey bull was bred by A. L. Churchill, Oklahoma, and was of exceptionally good breeding. He was sired by Gamboge You'll Do who is by You'll Do Champion and out of a granddaughter of Gamboge Knight. On his dam's side the bull traces close up to Sultan of Oaklands. The only stipulation regarding the ownership of the bulls was that they stand at public service at a reasonable fee for three years within the trade territory of the City Bank. The new owner received all registration papers and health certificates and had the privilege of selling at any time but the purchaser must keep the bull in service in the community until the three-year period transpires.

After the drawing of both bulls everyone adjourned to a vacant lot nearby where the bulls were inspected. Then all the people joined in a parade around the square behind the bulls and a moving picture was taken of the crowd. After the parade a cow judging demonstration was given on three registered Jerseys. And, by the way, Mr. Wolfinger had a bred heifer on exhibition that would worry any contending showman at a state fair.

In the afternoon the crowd was entertained by addresses by specialists from the Oklahoma Agricultural College, among whom was C. W. Radway, dairy specialist and secretary of the Oklahoma Jersey Cattle Breeders' Association.

Mr. Wolfinger was very enthusiastic over the results of his experiment and is planning to repeat it again this year. Plans were also made by Mr. Radway, Mr. Atkeson, and A. I. Jordan, the live wire county agent, for a bull and calf club campaign in that county the latter part of March.

We need more bankers with a vision like Mr. Wolfinger in this country instead of money lenders. He knows that when the rural population prospers, so does he. It is in a way a selfish motive on his part but some bankers don't see far enough ahead to really be selfish in a big way. Tell your banker about this plan.

Missouri. F. W. ATKESON.

Western Guernsey Association Changes Name

At its 22nd annual meeting held at Madison, February 10th, the Western Guernsey Breeders' Association voted to change the name of the organization to the Wisconsin—Illinois Guernsey Breeders' Association. This action was taken because the name formerly used has been adopted by an association of Guernsey breeders on the west coast. The two states, Wisconsin and Illinois, alone were included in the new organization because of the common interest among the breeders in these two states.

C. R. George of Indiana addressed the meeting on the subject of Guernsey calf clubs, which proved to be a very popular one and in which most of the breeders show much interest. He stated the "big problem before the Guernsey breed is not one of cattle but one of men". He emphasized the value of the calf club in developing boys and girls in a larger knowledge of dairy cattle breeding. The Indiana plan of these clubs is outlined for three years' work, the club member taking a calf at the age of about six months, caring for it, showing it at a fall show, carrying it through the next year's work, and showing it again in the fall; and then keeping records on it for one more year when the heifer has freshened and bringing it into a final show at the end of three years. Mr. George insisted that the permanent ownership of the calf by the member is a vital factor in the success of a calf club and stated that the third year of the work is the most important. He also pointed out the fact that a local leader is necessary who will see that the club member makes a monthly report of his work and that the work is kept up in good condition. He stated that the Indiana clubs, which own more than 200 pure-bred Guernseys, have been a big help to the breed in that state, that the clubs have resulted in showing an increased number of animals at the fairs, in the ownership of good Guernseys by many new young breeders, and finally that the clubs "have done more good for the parents than for the boys and girls themselves".

A dozen breeders at the meeting pledged themselves to furnish Guernsey calves for clubs at a cost of $150, it being evident from reports made that the difficulty in securing calves is handicapping the formation of new clubs.

A. L. Hyzer of Iowa, who has sold Iowa farmers over a thousand head of grade and pure-bred Guernseys, reviewed the present economic situation on Iowa farms and said: "Iowa farmers readily see the mistake we have made in not keeping more cows on our farms. We have come to the conclusion that to uphold the present high price of our land, we must have more dairy cows."

J. E. Stallard, newly appointed fieldman for the Middle West, in a review of the opportunities for Guernsey extension work in this territory, listed calf clubs and the increased ownership of pure-bred sires as the two most important projects which he will undertake.

B. F. Sheridan, who has lately been very successful in advanced registry work, declared that the making of records is a very easy matter "after you get started". He said: "If you are a cow man, records are easy. If you're not, don't start. Just start; that's about all there is to testing. I can't see for the life of me how a breeder can be successful without testing. I don't believe he can."

H. W. Griswold presented data showing the marked persistency of the Guernsey throughout her twelve-month record period as compared to other breeds and drew the conclusion that the 365-day record is the most satisfactory for the breed. He showed that for the ten highest producing cows among the Holsteins the average production for the first month is 112 pounds of fat. This declines until the average for the twelfth month is 76 pounds. With Jerseys the average in the first thirty days is 88 pounds and, in the twelfth month, 60 pounds. Ayrshires run from 70 pounds in the first to about 55 in the last month of testing. As compared with these figures, the first month of the ten high Guernsey records averages 80 pounds of fat. Throughout the year the production is never over 90 pounds or under 80, until the last year when the average is 76 pounds.

Following this discussion the association adopted a resolution asking the Executive Committee of the American Guernsey Cattle Club to continue the double letter classes and, if the addition of new classes must be made, to form a 305-day class which shall be a real farmers' test in which the milking is done twice a day and in which a calf must be dropped before the year's end.

Another important resolution passed was one demanding that all cattle entered for dairy shows and fairs shall be tested for tuberculo. is not earlier than the first of July previous to showing, that certificates shall be called for when the animals enter a fair ground, and that these must be certified to by qualified federal or state inspectors. The resolution also calls for strict observations of sanitary precautions by state fair managements.

Plans were made for the holding of a consignment sale the day following the annual meeting of the American Guernsey Cattle Club in 1922 and a committee appointed to have charge of the sale. Charles Hill of Wisconsin was made chairman; Charles Wirt, Minnesota; Drew Ten Broeck, Illinois; H. W. Griswold, Wisconsin; and Percy Jones, Iowa, being other members. F. E. Fox and J. A. Murphy form a committee to supervise the selection of a Wisconsin herd to be entered at the National to represent the state in the state herd class.

In the election of officers, B. F. Sheridan was made president; Ernest Sass and Jay Fruit, vice-presidents; and H. W. Griswold was re-elected secretary. J. A. Murphy and Homer Rundell were elected to the executive committee.

About sixty breeders attended the evening banquet at which talks were made by the following breeders: F. K. Babson, Bert Hyzar, C. R. George, Drew Ten Broeck, Delbert Kingston, W. A. Munn, G. R. Ingalls, B. F. Sheridan, H. W. Griswold, and J. E. Stallard.

PEARL'S DOT. A TRULY GREAT COW, OWNED BY SHOREWOOD FARM, MINNESOTA

This five-year-old Guernsey cow has produced in a trifle more than three years, without a single day's rest period, three living calves, three records averaging 12,053.5 lbs. milk containing 632.36 lbs. fat. The first record placed her third in her class, the second made her champion of all three-year-old Guernseys in the Roll of Honor, and had she produced twelve more pounds in the last record she would have qualified for a place among the Class C leaders. She now holds ninth place in Class GG and second in Class EE.

Eastern Milk Notes

HOARD'S DAIRYMAN:—The immense new plant of the Williamsport, Pa., Milk Products Company now under construction for John H. Hurr and his business associates, while primarily an ice cream manufacturing plant, will include facilities for the proper pasteurization of milk, with a capacity of from 8,000 to 10,000 quarts each day. The company intends to operate a fleet of trucks throughout the rural section of that vicinity collecting milk for the plant and will establish retail delivery routes in the city.

⚜

The Grove City Creamery of Grove City, Pennsylvania, continues to manufacture foreign types of cheese by methods developed in the laboratory of the Dairy Division. The production of Roquefort, Swiss, and Camembert cheese during the past year exceeded 130,000 pounds.

⚜

The Tioga Manufacturing Co. of Wellsboro, Pennsylvania, is to be incorporated with $200,000 capital for the manufacture of powdered milk, milk chocolate, butter, and other milk products.

⚜

The Franklin Dairy Co. at Ravena, New York, has posted notices that wages at their plant will be reduced $.25 to $1.00 per day. Heretofore the company has been paying $4 and $5. Some milk plants in Pennsylvania have cut their employee's monthly checks 10 per cent.

⚜

At a recent meeting of the Dairymen's League of Deposit, New York, it was voted to purchase the old Mutual creamery building for a new creamery in that village. It was planned to sell shares in the creamery on the basis of $10 per cow and a committee was appointed to procure the subscriptions at once as large improvements are to be made on the building, and they want to be ready for business by April 1.

Another League plant that is rushing its construction so as to be ready to receive milk on April 1 is the new Dairymen's League Creamery at Accord, New York. The contract for the erection of this plant has been awarded to Ludke Brothers of Auburn, New York, specialists in this kind of construction, who built the League buttermaking plant in Auburn so quickly.

⚜

A report was recently given by the Warren Settlement Cheese Company of Black River, New York, for the season of 1920. This factory opened April 1 and closed November 7. The total pounds of milk received was 1,033,601; total pounds cheese made, 99,848; gross receipts, $25,-456.79; net proceeds, $23,366.88; expenses, $2,089.91; net price per hundred pounds of milk, $2.26; average price per pound of cheese, $.254; average pounds of milk to pound of cheese, 10.33.

⚜

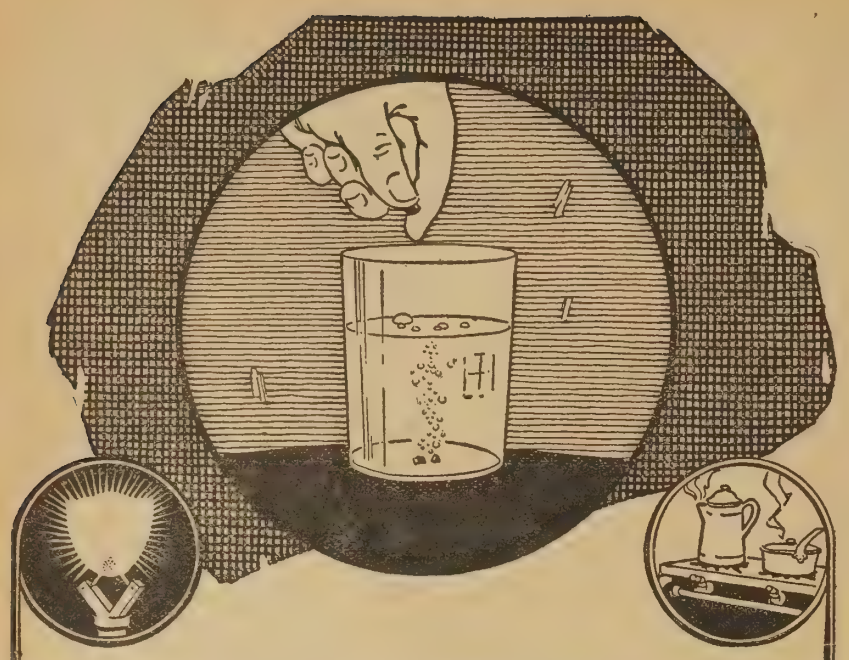
The Royal Dairy Company of Elmira, N. Y., has been dissolved.

Pennsylvania. E. M. L. BLANCHER.

Cheese Prices for January

The daily quotations of the U. S. Bureau of Markets show the following average prices for American cheese (style Twins) for three large markets in January, 1921 and 1920:

	Average price Jan. 1921	Jan. 1920
	Cents	Cents
Wisconsin Boards	23.88	30.84
Chicago	23.56	30.13
New York	23.50	31.00



This represents an advance of two cents over the December average on the Wisconsin boards, with Chicago showing a one cent advance and New York receding a cent and a half. Longhorns averaged 26.75 cents on the Wisconsin boards, or nearly three cents above the price of Twins and two and a half cents above the average they sold for in December. In January a year ago Longhorns averaged 32.65 cents, or six cents higher than for the current year.

Dr. Jordan Retires

HOARD'S DAIRYMAN:—It has been understood for some time that Dr. Jordan, head of the state experiment station at Geneva, is soon to leave that institution and return to his native state of Maine. It was not, however, until last week that his resignation was formally presented to the board of control. Hoard's Dairyman had an account of the doctor's activities about a year ago and it will be unnecessary for this statement to go into his life work materially. Dr. Jordan said to the writer that he has been at the head of the Geneva Station for twenty-five years and was similarly engaged in Maine for eleven years, and he believes that he has carried a burden of that proportion long enough. Dr. Jordan goes about the first of June and he carries with him the confidence of the state as regards agriculture.

New York. H. H. LYON.

The American Farm Bureau has employed as the general office manager A. R. Simpson, recently assistant secretary of the American Poland China Record Association. Mr. Simpson is a native of Wisconsin, a graduate of the University of Illinois, and had practical farm experience before taking up editorial work with the Swine World and later with the Shorthorn World.

Crushed stone and water —and a machine to mix them

THAT is Colt Carbide Lighting-and-Cooking reduced to its simplest terms. And what a wonderful combination! The Colt machine brings carbide (crushed stone) and water together, producing a marvelous gas.

This gas produces the *hottest* cooking-flame known; and a light that is seemingly a miniature of that great orb that rises in the east and sinks in the west.

Cook and Illuminate with a Colt

The Colt Carbide Lighting-and-Cooking Plant drops a handful of carbide intermittently into a self-contained tank of plain, ordinary water. The water releases the gas from the impregnated stone, and there you are!

There is no waste. The Colt machine shuts off automatically as you draw upon it for fuel and light. The carbide residue is slaked lime, good for fertilizer.

Picture a cool, sweet kitchen, even in sweltering summer, made possible by carbide fuel for the gas-range, the hot-plate and the flat-iron.

Picture your house, barns, outbuildings and driveways a blaze of radiant glory in the pitch black of the country night. And the little old Colt machine making gas as you need it, with the ease and dignity of the old-fashioned windmill!

You want to know what it costs and all about it. We'll tell you gladly, if you'll just send us your name and address on a postcard. *Do* that.

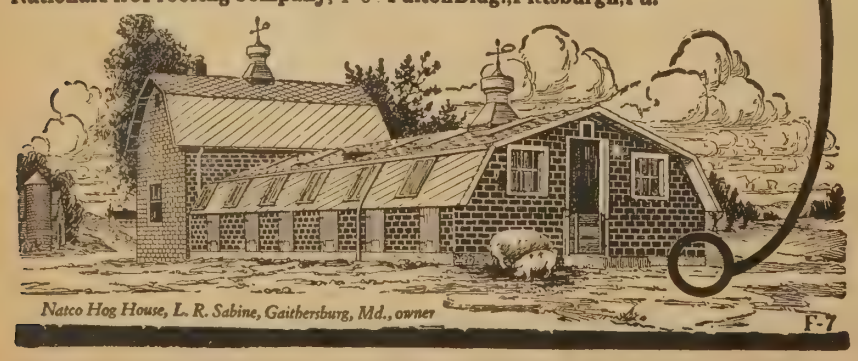
Natco Hog Houses Help Save the Pigs

Build the farrowing houses of Natco Hollow Tile. The three hollow spaces filled with air in a Natco wall provide perfect insulation through which heat, cold or moisture will not pass. Thus Natco Hog Houses are warm in winter and cool in summer. Moisture does not condense on these walls as on other forms of masonry. And the smooth glazed surface of Natco walls is easy to disinfect—it affords no hiding-place for germs or vermin.



Section showing foundation

Natco Hog Houses soon pay for themselves in pigs saved. They cost almost nothing for upkeep—never need painting and seldom any repairs.

Write for our *free* book, "Natco on the farm."

Ask your building supply dealer to quote you on Natco Hollow Tile.

When Writing to Advertisers, Mention Hoard's Dairyman

Oregon Dairymen's Co-operative League Marketing Agreement

The Oregon Dairymen's Co-operative League, a non-profit, co-operative association, with its principal office at Portland, Oregon, hereinafter called the League, first party, *and the undersigned dairyman, second party, agree:*

1. The dairyman is a member of the League and is helping to carry out the express aims of the League for co-operative marketing, for eliminating speculation and waste, and for dairymen and the public, by this and similar stabilizing food markets in the interests of the obligations undertaken by other dairymen.

2. The League agrees to buy and the dairyman agrees to sell and deliver to the League all of the milk or cream produced by or for him, in Oregon or at any place tributary to Portland, during the years 1920 (after date hereof), 1921, 1922, 1923, 1924, 1925.

The dairyman may retain milk for home, farm, or local consumption or for retail distribution to consumers.

3. The dairyman expressly warrants that he has not heretofore contracted to sell, market, consign, or deliver any of his milk or cream to any person, firm, or corporation, except as noted at the end of this agreement. Any milk or dairy products covered by such existing contract shall be excluded from the terms hereof for the period and to the extent noted.

4. (a) All milk or cream shall be delivered to the order of the League, as when and where directed by the League.

(b) *Any deduction or allowance or loss that the League may make or suffer on account of inferior grade, quality, or condition at delivery, shall be charged against the dairyman* individually.

(c) The League may make rules and regulations and provide inspectors to standardize the quality, method, and manner of handling and shipping such milk and the dairyman agrees to observe and perform any such rules and regulations prescribed by the League and to accept the grading established by the state and federal authorities and the League.

5. The League agrees to resell such milk or cream, or the by-products manufactured therefrom; together with milk or cream or by-products of like variety and grade, delivered by other dairymen under similar contracts at the best prices obtainable under market conditions; and to pay over the net amounts received therefrom as payment in full to the dairyman or dairymen named in contracts generally similar to this contract according to the value of the milk or cream delivered by each of the dairymen after deducting therefrom the costs of maintaining the association and of handling, grading, and marketing such milk or cream or by-products; and also reserves for advertising, credits, and other general commercial purposes said reserves not to exceed one per cent of the gross resale price, within the discretion of the League.

6. The League shall for all purposes here, pool or mingle milk or cream of the dairyman with milk or cream of a like grade from the same districts, delivered by other dairymen named in contracts generally similar to this contract. The dairyman agrees that his milk or cream or products thereof may be so mingled and that the returns therefrom, less all costs, advances and charges, shall be credited and paid to him on a proportional basis out of the receipts from the sale, marketing or other disposal of all such milk or cream of like grade, or of the by-products therefrom, each pool to be for a calendar month payment to be made monthly for whole milk or cream, and as and when determined by the League, for by-products therefrom.

7. The dairyman expressly agrees that the League may handle in its discretion some of the milk or cream in one way and some in another; and may manufacture into by-products such amounts of milk, cream and milk products as the League may deem proper, but the net proceeds of all milk, cream, and milk products of like variety and grade from the same districts less all charges, shall be divided ratably among the dairymen in proportion to their deliveries to each pool. Such distribution shall be made from time to time, in such amounts as the League may deem advisable until all the accounts are completely settled.

8. The League may sell the said milk or cream or the by-products therefrom within or without this state, at such time and upon such conditions and terms as it may deem fair and advisable; and it may sell all or any part of the milk and cream products to any agency for the co-operative marketing of the milk products of the Pacific Coast or of other states or group of states and under such conditions as will serve the joint interests of the dairymen and the public; and any proportionate expenses connected therewith shall be deemed marketing costs under Paragraph Five.

9. The dairyman further agrees that the League shall borrow money in its name for any purpose on the by-products or on any warehouse receipts or on any accounts for the sale of milk or cream or by-products or on any commercial paper delivered therefor. The League shall pro-rate the money so received among the dairymen according to the district pools and pay to each dairyman his proportionate amount thereof.

10. The League may establish selling offices, manufacturing plants, marketing, or other agencies in any place.

11. The dairyman shall have the right to close his dairy at any time in his free dis-

Seaboard

the south's newest great railway

Productive prairie land that only costs about $30 per acre often produces 50 bushels of corn.

Home-Grown Concentrates Year-Around Pastures

Instead of having to buy quantities of cotton seed, soy bean and velvet bean meal, the farmers along the Seaboard grow their own soy beans, velvet beans and peanuts.

As a pork maker, the average acre of peanuts is equal to 60 bushels of corn per acre. The average acre of sweet potatoes is equal to 100 bushels of corn.

Pasturage every month. No sheltered barns are needed. Dairying, cattle and hog raising pay the maximum profit.

The Seaboard opened up a new prairie country in Florida, Georgia, Alabama, South Carolina, North Carolina and Virginia.

Evanston, Ill. Dept. H, Brazil, Ind.

When writing advertisers please mention Hoard's Dairyman.

cretion; but if he produces any milk, or acquires or owns an interest in any, during the term hereof, it shall all be included under the terms of this agreement and must be sold only to the League.

12. This agreement shall be binding upon the dairyman during the period above mentioned as long as he produces milk or cream, directly or indirectly, or has the legal right to exercise ownership or control of any commercial milk or cream or any interest therein or of any dairy cows during the term of this contract.

13. From time to time, the dairyman will mail to the League any statistical data requested on the forms provided for that purpose by the League.

14. This agreement is one of a series generally similar in terms comprising, with such agreements, signed by individual dairymen, one single contract between the League and the said dairymen, mutually and individually obligated under all of the terms thereof. The League shall be deemed to be acting in its own name, for all such dairymen in any action or legal proceeding on or rising out of this contract.

15. The dairyman hereby expressly authorizes the League to deliver to the Oregon Dairymen's By-products Corporation any or all of his milk or cream for handling, processing, manufacturing into by-products, or under an obligation to pay all proportionate costs of such services and the retirement of 20 per cent of the preferred stock annually, beginning with 1921, and the 7 per cent dividend of all outstanding preferred stock, such other costs, charges, or advances and on such terms and conditions as the League may deem advantageous and profitable to the dairyman.

16. (a) If the League brings any action whatever by reason of a breach hereof, the dairyman agrees to pay to the League all costs of court, costs for bonds and otherwise, expenses of travel and all expenses arising out of or caused by the litigation and any reasonable attorney's fee expended or incurred by it in such proceedings; and all such costs and expenses shall be included in the judgment and shall be entitled to the benefit of any lien securing any payment hereunder.

(b) Inasmuch as the remedy at law would be inadequate and inasmuch as it is now and ever will be impracticable and extremely difficult to determine the actual damage resulting to the League should the dairyman fail so to sell and deliver all of his milk or cream, the dairyman hereby agrees to pay to the League for all milk or cream delivered, sold, consigned, or marketed by or for him other than in accordance with the terms hereof, the sum of 5 cents per gallon as liquidated damages for the breach of this contract, all parties agreeing that this contract is one of a series dependent for its true value upon the adherence of each and all of the contracting parties to each and all of the said contracts.

(c) The dairyman agrees that in the event of a breach by him of the provisions hereof, regarding delivery of milk or cream, the League shall be entitled to an injunction to prevent further breach hereof, and to a decree for specific performance hereof; and the parties agree that this is a contract for the purchase and sale of personal property under special circumstances and conditions and that the buyer cannot go into the open markets and buy milk or cream to replace any which the dairyman may fail to deliver.

17. The parties agree that there are no oral or other conditions, promises, covenants, representations or inducements in addition to or at variance with any of the terms hereof, and that this agreement represents the voluntary and clear understanding of both parties fully and completely.

The Jersey breed has three new state champions in Georgia. These are all owned by Mr. J. R. Humphries. Raleigh's Lily North, as a junior 3-year-old, has broken the state record with a production of 10,615 pounds of milk containing 528 pounds of butterfat; Raleigh's Louise of Brookhill, as a junior four-year-old, has produced 8,553 pounds of milk containing 494 pounds of butterfat; while the third record broken is that of Raleigh's Rose of Brookhill, who produced as a senior four-year-old 12,292 pounds of milk containing 609 pounds of butterfat.

Allis-Chalmers 18-30

3-4 Plow

3000 lbs. Constant Drawbar Pull

Power

How Seven Years' Development Gave Tremendous Reserve Power

DEEP plowing—*quick plowing*—that's the test of a tractor. It's a race against time and the weather—and your tractor must deliver tremendous power at high speed!

But with speed must be combined abundant reserve power. The going is fine on the level, but what of the grade? The draft for a time holds constant, but wait for the hard pans you strike farther on down the field!

Surely, the farmer who is buying a tractor should look first to the factors of *power and speed.*

NOW—the A-C 12-20!

SEVEN years and $3,000,000 were spent in perfecting the A-C 18-30. Now every proven feature developed in this model has been incorporated into the new A-C 12-20 2-3 plow tractor. Reserve power, long life, accessibility, simplicity—these are 12-20 features you'll appreciate. And large scale production—combined with the enormous buying power of this $42,500,000 company—makes this tractor, like the 18-30, one of the greatest values in the country.

$3,000,000 to Build Brute Reserve Into This Tractor

Seven years ago, when work first began on Allis-Chalmers tractors, the designing of an engine was entrusted to America's foremost consulting engineers.

Scores of *different* motors were produced in order to arrive at final design. After being assembled, each was "run-in," and then torn down for inspection. Then every motor was reassembled again—given another test.

So Allis-Chalmers re-designing went on—care, skill and persistence constantly guiding every construction operation. New power standards were sought—new power standards attained. Motor vibration was made no more noticeable than in the finest motor car or truck.

After years of testing, proving and improving, a complete A-C 18-30 tractor was built. Long-time tests were conducted—in every kind of soil. But production was still delayed! Finally a limited number of A-C 18-30's was released. Would they deliver the brute reserve that Allis-Chalmers wanted?

That Allis-Chalmers tractors more than made good is a proven fact today. Not a single A-C 18-30 owner made complaint. And now Allis-Chalmers tractors are perfected. Now, after seven years' development—*climaxing the expenditure of $3,000,000*—one of the world's largest manufacturing organizations goes into volume production!

Burns Kerosene—All Working Parts Accessible

The perfected four-cylinder valve-in-head 18-30 motor starts on gasoline, and after warming up works equally as efficient on kerosene. A twin-bowl carburetor and a two-way intake valve enable operator to switch from one fuel to another without leaving the driver's seat. It is nothing unusual for 18-30 owners to plow an acre an hour with a fuel consumption of only 2 gallons per acre.

Then, too, the A-C 18-30 owner is his own mechanic. Though enclosed in dust-proof housings, every working part is almost immediately accessible. Removal of two large side inspection plates exposes entire crankcase; clutch shoes can be taken out for re-lining in 15 minutes; valves can be reached for grinding or cleaning of carbon by removal of two cylinder heads.

WRITE FOR BOOKLET TODAY—Ask for the 18-30 or the 12-20 booklet—or both—giving complete details of exclusive Allis-Chalmers construction features which make these tractors so advanced in design.

DEALERS—Write today for attractive dealership and jobber proposition. Share in the mammoth sales co-operation program which goes with Allis-Chalmers 100-tractor-a-day production capacity!

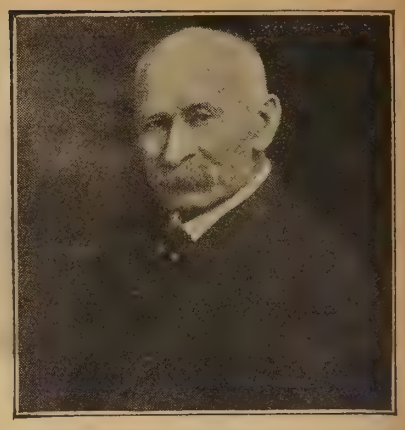
Biggest Co-operative Creamery —Bigger Than Ever—

I. O. SIMONSON, HEAD BUTTERMAKER



"NOTHING succeeds like success." The biggest co-operative creamery in the world, operated by the Barron Creamery Company of Wisconsin, is bigger than ever. The nineteenth annual report made to the stockholders at their annual meeting February 12, shows that more pounds of butter were made in 1920, and the selling price of the product and the returns to patrons were greater than in any previous year. The butterfat received in 1920 totalled 1,517,893.7 lbs. from which 1,805,694.75 lbs. of butter were made, an overrun of 18.95 per cent. The sale of butter amounted to $1,044,617.14, the total receipts of the creamery being $1,056,279.88. The average monthly price paid for butterfat was 65.5 cents and the average net price received for butter, 57.87 cents. The cost of making 100 lbs. of butter and placing it aboard a shipping car was $2.29. The average number of patrons was 928.

The Barron organization was started in 1902. Its first churning of 120 lbs. was made March 17, 1902, and sold for 27 cents per pound. Since that time it has made 16,766,389 lbs. of butter which it has sold for $6,107,563.81 and for which it has paid its patrons $5,684,629.85. This unusual record points the way for smaller and less prosperous co-operative creameries.

There are several reasons for the growth of this creamery. One of these is A. W. Arndt, manager and treasurer since 1910. Poor management is the rock on which co-operative efforts without number have wrecked. The saving made by paying a low salary and employing a manager of corresponding ability is a speculation few successful organizations risk. Mr. Arndt has given skillful, faithful service. He runs a big business by big business methods.

Volume of business is a prime factor in the Barron creamery's success. Its overhead per pound of butter is less than would be possible with a smaller output. Mr. Arndt states that increasing volume has enabled the managment to keep the cost of making a pound of butter as low as it was seven years ago. It commands a market for its butter not open to a small creamery. It affords more efficient equipment, more skill in its manufacturing, and buys its supplies to better advantage because of its size.

Uniformity of product contributes liberally to the net returns. The butter manufactured is of such quality that it sells to retail as a special brand. It is uniformly of high grade primarily because the cream is gathered frequently. Mr. Arndt says, "We don't want shipped in cream." Also the cream is handled by an expert buttermaker, I. O. Simonson, who is able to control most of the factors which cause lack of uniformity in other creameries. He knows what goes into the four big churns which churned nearly two million pounds of butter last year and he knows what will come out. Mr. Arndt believes the character of the water used in the creamery is partially responsible for the butter quality. He states that the limiting factor in quality is on the farms and not at the creamery—that an extra premium of one cent per pound could be obtained if the patrons would give better care to their product. One cent on the output of the creamery would have netted over $18,000 in 1920.

A. W. ARNDT, MANAGER AND TREASURER SINCE 1910

The sale of Barron butter is based on confidence, buyer and seller meeting each other fairly and allowing for the conditions which control prices. The creamery depends on quality and uniformity to make its market; the buyer recognizes this and pays accordingly. Since April, 1902, the bulk of the output of the creamery has gone to one firm in Buffalo, excepting in 1912 when shipments went to Chicago. A new contract is made each year without controversy because, as the manager states, "We don't want to lose the market and they don't want to lose the butter". The price for New York extras is paid at Buffalo which saves the heavier shrinkage and higher freight of New York shipping. A 63.5-lb. tub, as weighed at Barron, is paid for on the basis of 63 lbs. Also a slight premium is paid for June, July, and August butter.

THE BIGGEST CO-OPERATIVE CREAMERY, WHERE 1,805,694.75 LBS. OF BUTTER WERE CHURNED IN 1920

Drop in Feed Market Assumes Wider Proportions

[Report by U. S. Bureau of Markets.]

The feed market during the week ending February 5 was extremely weak. Prices of several feedstuffs were reduced $3 to $5 per ton. The demand remained unimproved. Inquiries received were mostly from feeders actually in need. Little speculative or investment buying was in evidence. Uncertainty as to the probable future demand has tended to restrict the placing of a larger number of shipments in transit unless sold. Rulings providing for the reconsignment of cars at local rates under certain conditions made this inadvisable.

A recent order to carriers generally to incorporate in their tariffs the rules recommended by the Interstate Commerce Commission in Docket 10457, providing that cars shall be reconsigned on the basis of the through rate whether orders are filed before or after arrival may possibly result in heavier transit offerings from now on.

Wheat Mill Feeds—The demand for wheat feeds was limited. While offerings from the North and Middle West were heavier, many of the recent sales are reported to have been made by short sellers who expect the improvement in the flour demand to be permanent. Season bran was quoted by Minneapolis jobbers around $19 to $20 per ton. Continued lower offerings made buyers timid and as a result bran and middlings closed about $5 per ton lower than a week ago. No particular increase in the country demand was noted on this break, although stocks on hand are reported as depleted. Stocks of flour middlings and red dog are heavy.

Cottonseed Meal and Cake—Southern jobbers quote guaranteed prime 43% protein cottonseed meal at $23 f. o. b. cars, Texas common points and 41% meal at $22. The 7% ammonia or 36% protein meal is bringing around $27 f. o. b. southeastern markets. The demand is light and mostly for quick shipment. Exporters are inactive and stocks at mills remain sufficient to take care of requirements. A fair inquiry is reported for hulls in the Southeast.

Linseed Meal and Cake—The demand for meal, while not so good as during previous years, is reported as fair. Carload business is increasing. Prices are somewhat easier and and jobbers' prices are still materially lower than those asked by mills. In the Chicago market, meal was bought at $38 when mills were offering on a basis of $40. The export demand for cake and meal was light.

Gluten Feed—A further reduction of $5 per ton was announced by the principal manufacturers on Wednesday, and other mills lowered their prices accordingly. The demand has slowed up while the production has increased.

Hominy Feed—There has been considerable activity in hominy feed, particularly in the East. Market prices appeared to be established by buyers rather than manufacturers. A large volume of business was reported booked at around $21 and $22 in the Chicago and St. Louis markets. The discount at which yellow hominy is selling under white hominy was further reduced and was only 50c to $1 per ton in several markets. Much of the feed is said to be used by farmers who are mixing their own dairy rations instead of buying the more highly concentrated feeds, already mixed. Production and movement are good.

Beet Pulp—Arrivals of foreign dried beet pulp continue. For the six months ending December, 1920,

*Hay quotations represent average of cash sales at these markets. ‡Normal. †Rolled.

these imports amounted to about 16,000 tons compared with about 5,000 tons for the same period, 1919. Trading in this commodity continues disappointingly quiet and heavy stocks are reported in Buffalo and other markets. Present offerings are more than ample for current needs and prices are irregular. Dutch pulp being quoted at $36 spot f. o. b. New York, and Michigan choice in transit at $44 delivered New York rate points.

Other Feeds—Continued favorable weather in nearly all feeding sections caused a light demand for the less important feeds. Oat feed sold as low as $6 in the Chicago market and white corn bran was offered at $31 delivered eastern points. Irish dried brewers grains could be bought at $33 f. o. b. cars New York and corn feed meal at $33 to $35 delivered New England territory, depending on quality. Flour middlings were generally offered at from $2 to $5, and red dog about $10 over the price of standard middlings.

Hay Markets Continue Dull and Irregular

While a few of the principal hay markets report steady prices caused by light receipts and better demand during the week ending February 5, southern and southeastern markets were lower and receipts were more than sufficient for the limited demand. The average prices of No. 1 timothy at 15 of the principal markets was about $27 per ton which is $8.50 per ton lower than at the corresponding time last year and $3.50 per ton lower than during the first week of February, 1919.

The continued mild weather is curtailing demand in all sections but dealers report that conditions generally are showing a slight improvement and that orders for single car shipments are increasing. The demand is not sufficiently broad, however, to absorb any material increase in receipts.

Not much improvement in the movement of hay is expected because of the bad condition of the roads in many sections and disinclination on the part of the farmers to sell at the current low prices.

Alfalfa held fairly steady for the better grades in most of the markets. At Omaha the receipts of good hay were very light and the railroad yards on Friday were entirely cleared of hay for the first time in many days. Only four cars of alfalfa were received at Chicago, which were not sufficient for the demand. Some Idaho hay has been sold to arrive but shipments are slow because of the stormy weather in that state. A considerable part of this hay was received at Kansas City during the week but was of much poorer quality than was expected. Grades lower than No. 1 are not selling so freely as during the previous week.

Unless later receipts are of better quality it is thought that but little of this hay can be handled at Kansas City except at considerably lower prices. The Memphis alfalfa market continues dull. Good stocks of hay and excellent pasturage are contributing to the weakness of the Pacific Coast alfalfa markets.

Straw prices have fluctuated somewhat during the week but are generally from 50c to $1 per ton lower. Reports from Indiana state that the paper mills in that state have accumulated large stocks of straw and are now out of the market. Wheat straw is quoted as follows: Baltimore $14.50, Pittsburgh $15.50, Cincinnati $12, Chicago $12.50, Minneapolis $7.50. Oat straw: Kansas City $9, Omaha $8.50, Minneapolis $8; New York $12, Chicago $15, Pittsburgh $15.50. Rye straw: New York $17.50, Pittsburgh $16, Cincinnati $14, Omaha $8, Chicago $14.50, No. 1 straight rye straw Baltimore $23.50.

Corn Prices

HOARD'S DAIRYMAN:—As the key to the prices of all feedstuffs, corn holds out satisfactory promises to dairymen eager for low ration costs. Corn is selling at the lowest price level since the opening of 1913 and on even a lower basis as compared with that year when the higher freight rates are taken into consideration. The technical position of the market for corn does not point to any sharp rise in prices for many weeks, hence the probability that the coarse grain will continue to serve as a powerful factor in holding down the cost of all dairy rations.

Corn is selling on Middle West markets around 50 to 60 cents a bushel, largely below a cent a pound. In the country the grain is selling around an average figure of about 35 cents a bushel net to the farmer. At this time a year ago cash corn was bringing around $1.50 a bushel on Middle West markets, and the same grades of corn which now are selling around a cent a pound sold as high as $2.40 a bushel in August of 1917, when the highest prices in history were reached. Only last June the price of corn was up to $2 a bushel, the decline of as much as $1.50 a bushel in a period of eight or nine months having been the most sensational in the history of the coarse grain trade of the United States.

Corn at $20 a ton compares with the current prices of about $40 a ton for linseed cake and meal, about $35 a ton in the Middle West for cottonseed cake and meal, $25 a ton for alfalfa meal, $30 for alfalfa molasses feed, $22 for bran, and $25 for shorts. Alfalfa hay in Kansas City at $25 a ton is fully $5 a ton over the market price of corn.

Immense supplies form the principal bearish argument in the corn market. The harvest last fall was the largest in history, amounting to 3,232,367,000 bushels, following a near record crop of 2,858,509,000 bushels in the preceding year. Such an immense supply of corn might be disposed of under ordinary conditions without wielding too much bearish influence upon the price. But the corn crop alone is only a part of the super-abundance of feeds. Kafir and milo, close competitors of the coarse grain, yielded the largest crop in history, the outturn of oats was enormous and virtually every other feed is available on a larger scale than in many years. The demand situation offers additional bearish arguments. The extremely mild winter weather has effected a rather sharp reduction in the consumptive demand for corn and feedstuffs as a whole. Also, there are 5,000,000 fewer hogs on farms of the United States and fewer beef cattle to consume the enormous crops, the radical readjustment of live stock prices being a further restricting influence in the demand situation.

The movement of corn to market is not large in comparison with the enormous stocks available in the interior, yet the arrivals at terminals are far greater than the trade can absorb. The only important buyer of corn on markets is the elevator operator, who takes the cash grain and immediately hedges or sells a similar amount of corn in the future market. A discount of about 8 cents a bushel has prevailed on the cash under the May delivery in the future market and, naturally, the elevator operator has profited by his buying of the cash grain. This, however, is really a bearish argument and is one of the strong depressing influences in the coarse grain trade. Each time the elevator dealer sells grain as a hedge in the future market the buyer is contracting for actual corn, not merely an imaginary supply which the speculative shortly hopes to be able to "buy in" at some future time at a profit. And, unless the buyer of the futures has a real consumptive outlet for his purchases of corn, he may find himself with a considerable lot of grain on his hands which lacks an outlet. The stocks of corn on markets are piling up rapidly, and, with prospects of no great enlargement in the feeding demand for the coarse grain, elevators doubtless will be forced to deliver their accumulated stocks on their hedged sales or contracts.

High prices, or at least relatively high values, for hogs have been held by some market observers as a bullish factor in corn. Normally the price of hogs per hundredweight on markets and corn per bushel is on a ratio of ten to one. Hogs around $9 per hundredweight and corn at an average of 55 cents a bushel reflects an abnormal discount for the grain. But this is not an important strengthening influence for corn, owing to the relatively small supplies of the pork animals, not enough being available to consume the enormous corn crop. Cattle prices, on the other hand, also sheep, are at a discount under the coarse grain, with the demoralized condition of the market for these meat animals a depressing factor on corn.

The first two months of the year often witness the low point on corn. Marketings of the grain usually begin to fall off during February, and with pressure of renters' supplies out of the way by March 1, settlement time, values often strengthen. The influences surrounding the demand and supply situation this year, however, are so vastly different from those of previous years that close observers of the market express serious doubt whether prices can fluctuate in their usual course in 1921. Moderate rallies from the present extremely low levels are expected in the corn market from time to time, but material advances are improbable over a lengthy period.

Missouri. SANDERS SOSLAND.

Wisconsin Bankers Pushing Farm Accounting

The Wisconsin Bankers' Association has a committee on farm accounting. Special arrangements have been made whereby a very simple and complete farm account book can be secured through any bank in the state. A sample copy of the account book with an appropriate display card has been mailed to every bank in Wisconsin for display in the bank lobby. Arrangements have been made whereby the totals from the farmers' account book will be accepted for income tax purposes and thus save much time in making out tax returns.

The Bankers' Association has also published an illustrated Banker—Farmer News Bulletin on farm accounts and the farmer's income tax which is being distributed by the banks to their farmer patrons.

This effort of the Bankers' Association is meeting with a hearty response from the farmers. The banks believe that this work will promote better business methods on the farm and increase farm profits.

January Condensery Prices

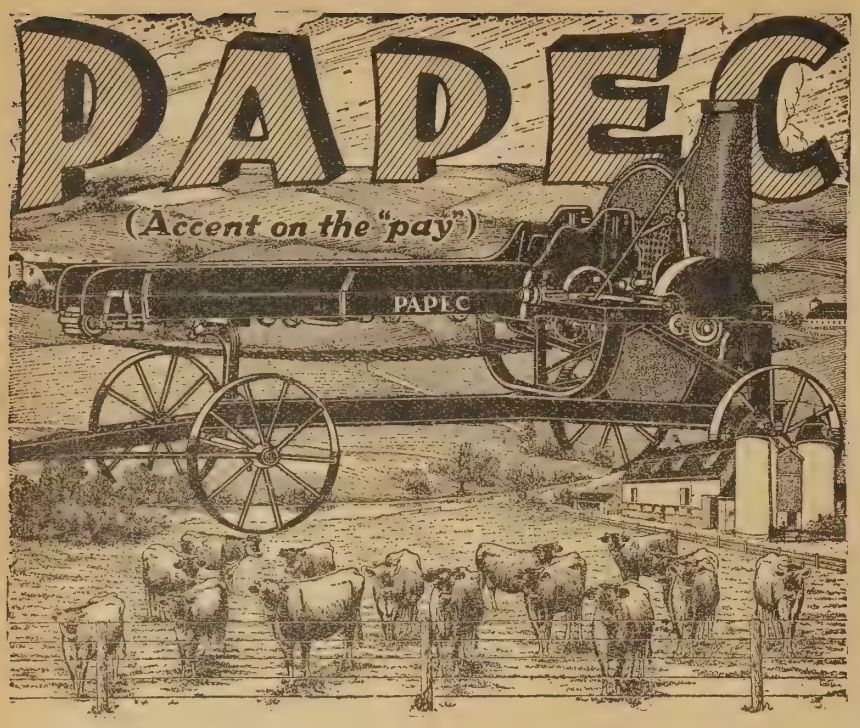
[Report by U. S. Bureau of Markets.]

Reports from manufacturers indicate that there is little change in the condensed milk situation. Few additional plants were closed during January, but it is estimated that the majority are not operating up to normal.

Reports indicate that over 50 plants are temporarily closed. While this is a larger number than was reported last month, it should be noted that last month a number of plants which had suspended condensing operations were included among those which had not arrived at a price decision, on account of the milk bought having been made into butter or cheese for sale on the open market. The number of factories either temporarily shut down or not having determined producers' prices increased from 55 in December to 73 in Jan.

Considerable butter from condenseries which are accepting milk, skimming it, and returning the skim to factories was received at the large markets during January, although the quantity seems to have fallen off toward the last of the month. Some cheese has also been seen on the markets.

The outstanding feature of the month was the reduction in the cost of milk. The January average for the United States as paid by factories manufacturing both case and bulk goods was $2.13 per 100 lbs. which compared with $2.44 in December. It is interesting to note that this price is $1.36 lower than January, 1920. Lowest prices were reported from states in the Pacific Northwest and highest prices from New York, New Jersey, and Pennsylvania. A number of condenseries resumed operations on Feb. 1, and it is said that further reductions in buying prices will occur. Selling prices in January were also somewhat lower than the previous month.



Prices Paid Producers for 3.5 Per Cent Milk at Condenseries
[Per 100 pounds.]

Geographic section	Dec. 1, 1920 Case and bulk goods	Dec. 1, 1920 Bulk goods only	Jan. 1, 1921 Case and bulk goods	Jan. 1, 1921 Bulk goods only
New England	$2.72	$3.95	$2.39	$3.49
Middle Atlantic	3.38	3.02	2.93	2.81
South Atlantic	3.02	2.43	2.89	2.30
E. North Central	2.24	2.95	2.04	2.85
W. North Central	2.40	2.59	2.15	
Western (North)	1.93	2.94	1.71	2.73
Western (South)	2.27		1.91	
United States	2.44	2.99	2.13	2.83

Statistically, the situation appears somewhat improved in certain respects. Total stocks Jan. 1 were some 38,000,000 lbs. lighter and unsold stocks 26,000,000 lbs. lighter than Dec. 1. Some manufacturers whose stocks were light reported that they were ample for immediate needs, but that they would be short if jobbers were buying normal amounts. Unfilled orders were reported as amounting to practically nothing. Export business in December showed some improvement over November, especially on evaporated milk, over 3,000,000 lbs. going to Germany alone, and total exports being 2,000,000 lbs. heavier.

Wholesale Prices of Condensed and Evaporated Milk November and December

The Fact That It Operates with Less Power Proves the Efficiency of the Papec Throughout

—our catalog shows how Papec Ensilage Cutters save dollars for Papec owners

WHEN an ensilage cutter does *more work* with *less power* it proves that it is good not only in one feature but in *every* feature—that each part is in tune with every other part and that all work perfectly together. It is this fact that makes possible our exceptional *guarantee* which protects you:

"We Guarantee any Papec Cutter to throw and blow ensilage perpendicularly to the height of any silo, with any power, provided the speed of the cutting wheel does not fall below six hundred (600) revolutions per minute. We also guarantee that any Papec Cutter will cut and elevate more ensilage with the same power than any other blower cutter."

Our catalog explains *why* we can make such a remarkable guarantee—*why* the Papec can save dollars for you—*why* you should decide now to

Kansas Records Broken

R. B. BECKER, KANSAS

A NEW state record over all breeds and ages in both milk and butterfat has been established in the Sunflower state. The record of Lady Volga Colanthus 2d, a five-year-old Holstein cow owned by Geo. Young, sets a new standard for Kansas breeders.

In 365 days this cow produced 24,638 lbs. of milk containing 771.78 lbs. of butterfat. This displaces the mature Holstein record made by Maid Henry at the Kansas State Agricultural College in 1912, of 19,600.4 lbs. of milk, 716.27 lbs of butterfat. It also exceeds that of Canary Bell, the Ayrshire cow at the college that established a state record in both milk and fat in 1918, with 19,863 lbs. milk, 744.51 lbs. butterfat.

Lady Volga Colanthus 2d was the first cow in the state to produce over 20,000 lbs. of mlk, when as a senior three-year-old she completed a yearly record of 21,396.2 lbs. of milk, 659.346 lbs. fat. This milk record was exceeded in 1920 by Charlotta Empress Fobes, also a Kansas college cow, who made 24,546.9 lbs milk, 694.25 lbs. fat as a senior four-year-old.

Lady was fed grain according to her production of milk and butterfat. This was supplemented by corn silage and alfalfa hay. Considerable credit is due to the sudan grass pasture which was available during the months of June, July, August, and September. This succulent pasture makes splendid growth under Kansas conditions and supplies a much needed green feed at a time when natural pastures are past their prime. During the year Lady was milked and cared for by Clemens Young, who attended the Agricultural College and at the same time gave this cow good care and attention. Just after she finished this record, Mr Young was a member of the dairy judging team which represented Kansas at the 1920 National Dairy Show. He was the high individual among 63 contestants from 21 states. The Kansas team was high team of the contest, winning the sweepstakes cup offered by the National Dairy Association for the highest scoring team on all breeds. The "Hoard's Dairyman" cup, Holstein-Friesian cup, American Jersey Cattle Club cup, and the Jersey scholarship were all numbered among the winnings of this team.

Needless to say, Mr. Young appreciates the value of good type and production in building up a herd of pure-bred dairy cows.

HOLSTEIN COW, LADY VIOLA COLANTHUS 2D
Kansas state champion in milk and fat production. She is owned by Geo. Young.

Beware of "J. Brown"

Managers of dairy cattle sales may profit from the costly experience of consignors at a Red Poll sale at Dixon, Illinois, January 12. If an affable stranger appears at an auction as a buyer and fills the description of "J. Brown" who bought "foundation stock" at Dixon, it were well to ask him, "How come?"

So ingratiating was this "J. Brown" that he was put on the Red Poll banquet program and readily taken into the fold. He furnished ample identification, partially through a telegram received at Dixon—which it appeared later he had obligingly sent himself from Chicago. This message, purporting to be from a wealthy partner in Kansas, directed "Brown" to buy, and gave minute shipping directions. "Brown" followed directions. He selected $3,650 worth of Red Polls, well fleshed animals of quality, proving himself a very good judge. The sellers were highly pleased and showed their liberal buyer every courtesy, even to assisting him in loading and shipping his purchases on a late afternoon train Chicago-bound. He gave his check in full payment.

Could the consignors have foreseen what happened on the train, they would hardly have helped load their red pure-breds on it. Enroute to Chicago the shipping bill was changed so the cattle would not be "put in an Arms Palace car and shipped via the Santa Fe to Kansas"—but so they would go to a commission firm in the Union Stock Yards! The following morning they were sold for slaughter, netting "J. Brown" a check for $1,360 which he promptly cashed.

These facts the breeders discovered several days later when the check for $3,650 was returned, "protested". Now they have employed the aid of the Wm. J. Burns detective agency in what has thus far proved a vain search for "J. Brown, German, speaking with accent; 45 to 50 years old; heavy, weighing about 230; complexion ruddy; hair dark brown; slightly bald; eyes blue; short mustache; features full; heavy jowl; scar on inside of right hand, commencing between little and third finger and running inward on palm".

Copyright 1921, by The Goodyear Tire & Rubber Co.

Open the Winter Road to Town—Haul on Pneumatics

"The big Goodyear Cord Tires on my one-ton truck carried the supplies for my new home over roads that would prove impassable to less active and less powerful traction. Many a time the wheels were buried to the hubs, yet these sturdy pneumatics always pulled through. Without costing me a cent for repairs, and at a saving of at least 33⅓% in gasoline and oil, they brought from Bentley, four miles away, 15,000 lbs. of iron, two carloads of brick, five tons of cement, 65 tons of sand, and 35,000 feet of lumber. Between times, they hauled five loads of hogs to market, returning with full loads of supplies. I hauled a carload of corn when I would have been overhauling the truck if I had tried to do all this without the air-cushioning support of pneumatics."— Arthur S. Witt, Farmer, Neola, Iowa

BOTH the work that Goodyear Cord Tires do, and the advantages they exhibit in mastering the severest conditions of farm hauling, are best described in such testimony as that furnished above.

The tractive power, the cushioning resilience, and the greater activity combined in the big pneumatics by their Goodyear Cord construction give the farmer a command of the road in all sorts of weather, protect his truck and product, and make possible many an extra profitable trip.

Farmers' experiences with motorization and pneumatics will be furnished to anyone interested by The Goodyear Tire & Rubber Company, Akron, Ohio, or Los Angeles, California.

GOODYEAR

CORD TIRES

These Seven Cows

Fed From the Product of One Acre for Over a Year

64 tons of **Ross' Eureka Silage Corn** to the acre is the yield reported by Mr. Reynolds, Farm Superintendent of the Worcester State Hospital, Massachusetts. The product from one acre of Mr. Reynolds' crop would fill a silo 24 feet by 14 feet. Two acres would fill a silo 30 feet by 14 feet, and three acres would furnish enough silage to fill a silo 40 feet by 16 feet.

Ross' Eureka Corn grows the tallest, has the most leaves, is very short jointed and will produce more tons of good sweet silage per acre, than any other variety. It outyields all others under any climatic conditions. We have been selling Eureka corn for nearly 40 years and we know before shipping that it will grow under favorable conditions. This corn usually germinates 90 per cent or better.

Ross' Eureka Corn

From a letter of C. B. Deremer & Son, Scranton, Pa.

"I planted three plots of your Eureka corn. Plot No. 1 I planted May 12th stood 15 to 17 ft. high and eared very heavy. Plot No. 2 has been planted to corn 4 years. Planted it May 22nd, averaged 15 ft. high and was eared good. Plot No. 3, good sod, plowed under the first week in June, planted June 8th and averaged 16 ft. high."

From a letter of George E. Peer, proprietor Meadowbrook Farm, Chili Station, N. Y.

"—we got simply an immense yield from your Eureka Seed, in fact, we filled one immense silo from nine acres alone, and a friend of mine near here, a Mr. Ely Buell, even had more phenomenal success than we did."

Ross' Eureka Corn is only one of our specialties. Complete line of Farm Seeds; Oats, Rye, Barley, Potatoes, Wheat, Buckwheat, Cowpeas, Vetch, Soy Beans, Essex Rape, and all varieties of Field and Ensilage Corn; Grass Seeds, including all kinds of Alfalfa and Sudan Grass. Also full line of Agricultural Implements, Poultry Supplies, Fertilizers, etc. **Our 120-page catalog will be mailed free on request.**

Oleo Interests Denied Hearing On Dyer Bill

February 8th the House Committee on Agriculture voted to hold no hearing on the Dyer Oleomargarine Bill during this session of Congress. This action followed a reconsideration of the committee's previous vote granting a hearing for February 15.

The purpose of the Dyer Bill is to let down the bars for the sale of oleomargarine, either colored or uncolored, in competition with butter. This bill has been pending in Congress since April 13, 1920, when it was introduced and referred to the Committee on Agriculture. The decision of the Committee on Agriculture to hold a hearing is the first indication in the present Congress of any consideration of oleomargarine legislation.

The representatives of the Institute of Independent Margarin Manufacturers had been asked by their officers to be present in force for this hearing. It appears that the oleomargarine manufacturers considered they could take advantage of the difficulties of the butter manufacturers, by reason of the recent ruling of Commissioner of Internal Revenue Williams, to press this oleomargarine bill and to find that the dairy interests are not united to oppose it.

The Dyer bill proposes that the word "margarin" shall be substituted for "oleomargarine" in naming or labelling all the manufactured "substances, certain extracts, and certain mixtures and compounds, including all those heretofore known as oleomargarine, oleo, oleomargarine oil, butterine, lardine, suine and neutral; all mixtures and compounds of oleomargarine, oleo, oleomargarine oil, butterine, lardine, suine, and neutral; all lard extract and tallow extracts; and all mixtures and compounds of tallow, beef fat, suet, lard, lard oil, vegetable oil, annatto, and other coloring matter, intestinal fat, and offal fat made in imitation or semblance of butter, or when so made, calculated, or intended to be sold as butter or for butter."

The change in the name is the first object of this bill and the second one is cleverly hidden in the above quotation, for it specifically authorizes in the wording above the use of coloring matter. A manufacturers' tax of $600 per year is provided, a wholesale tax of $200 per year, and an internal revenue tax of one cent per pound, to be paid by the manufacturer. No retailer's tax or supervision is provided for.

Section 4 provides that all oleomargarine should be put up by the manufacturers in their factories in cartons or in other packages of one, two, three, four, five, and ten pounds and in no larger or smaller sub-divisions, and a label is required on which shall be printed the word "'Margarin' in letters which shall be plainly legible, the internal revenue number of the factory, the district and state in which it is situated," and in addition to all other requirements a notice to the effect that the package and stamp cannot be used a second time.

There are numerous provisions relating to the other reading matter which might appear on the label or package, none of which prohibit the use of the word butter or any devices or wording which may tend to convey to the purchaser thereof that the product is a substitute for butter. The proposed law further provides that such parts of the butter definition law as impose a tax upon and regulate the manufacture, sale, exportation, and importation of oleomargarine, and of the act of May 9, 1902, entitled "an act to make oleomargarine and other imitation dairy products subject to the laws of any state or territory or the District of Columbia into which they are transported and to change the tax on oleomargarine and to impose a tax, provide for the inspection, and regulate the manufacture and sale of certain dairy products," etc., are repealed. This one paragraph (section 12) wipes out at once, if it is passed, the inspection laws and the butter and other dairy products standard laws now in force.

BEAUTY COLLIER 2ND, AT THE LEFT, AND HER DAUGHTER, GALLATIN GIRL, BROWN SWISS COWS SOLD BY W. O. BOHART, MONTANA, TO DEAN & SON OF NEW YORK. THE SELLING PRICE OF THE FORMER WAS $1,000

⚜

A well attended meeting of the Maryland—Virginia Milk Producers' Association was held at the assembly room of the National Board of Farm Organizations on Saturday, February 5, when the matter of providing a method of taking care of the surplus milk which is developed in this territory was taken up and the association authorized its officers to equip and conduct a butter and cheese plant in Washington. Manager McLaughlin reported that he had plans well in hand for this new enterprise and it is likely that the plan will be in operation within the coming month or six weeks. The Maryland—Virginia Association has already reduced the price of milk from 44 to 36c per gallon.

⚜

J. D. Miller, vice-president and counsel of the Dairymen's League, is spending some time in Washington in the active interest of getting final action on the Capper—Volstead Collective Marketing Bill. In co-operation with President Milo D. Campbell of the National Federation of Milk Producers, this matter has been brought anew before the conference

committee which was appointed some weeks ago on which Senator Dillingham of New Hampshire has replaced Senator Nelson of Minnesota, who resigned, and to which Senator Walsh of Montana has been added. There is now prospect of a compromise whereby the objectionable Senate amendment will be modified so that it will be satisfactory to the dairy interests.

⚜

Internal Revenue Commissioner Williams has granted the request of the butter manufacturers for a hearing on the adulterated butter ruling and has postponed the time for the beginning of the collection of the tax to April. The hearing will be held before Commissioner Williams at his office in Washington on February 25. Professor McKay of the National Association of Creamery Butter Manufacturers spent several days of the past week in Washington on this matter. Many protests have been received from dairy interests and several members of the House and Senate united with the representatives of the butter manufacturers in asking for this delay and the new hearing.—NATIONAL DAIRY UNION.

New York Butter Market

NEW YORK CITY, FEBRUARY 8:—The long expected slump has finally hit the market. While there has been a gradual decline in butter prices since the holidays, there has been no decided slumps until recently. One week ago, the quotation on extras was 49½c, while today the quotation stands at 42½@43c, and the market is very weak. There is an absolute absence of buying interest and stocks are accumulating very fast. It is stated that the present decline is due largely to one receiver who has been getting large quantities of excellent butter from one creamery on consignment. In his eagerness to prevent an accumulation of the butter, he has been offering it at extremely low prices on the Exchange. The result is that there has been a general loss of confidence and demand, aside from that engendered by the necessity of procuring enough butter for current needs, has practically ceased.

Receipts of foreign butter during January were in excess of 3½ million pounds, so far in February they have been approximately one million pounds. Two shipments of Danish butter are known to be en voyage at present, the aggregate quantity of which is 10,000 casks, or about one million pounds. It is highly probable that large shipments of Danish butter will be forthcoming for a considerable time. England may take greater quantities of that butter after her restrictions are removed in March, but there is some doubt regarding that as she has contracted for the greater part of the butter produced in her dominions, Australia and New Zealand. As those countries are producing more than their normal quantity of butter, it is quite possible that their output may supply England's demand, in view of the fact that the English people have been educated to use substitutes in place of butter during late years.

A comparison of butter prices for the last several years on this date, February 8, is very interesting. The prices were as follows: 1913, 37½@38c; 1914, 25@26½c; 1915, 34½@35c; 1916, 33½@34c; 1917, 45@45½c; 1918, 51½c; 1919, 49@49½c; 1920, 67c; and, 1921, 42½@43c. It can be seen that prices are as yet considerably higher than those of pre-war times. It is of interest to note that during the winter months of the year, 1914, butter prices were extremely low. That was brought about by the influx of foreign butter which came immediately after the tariff on butter was reduced from 6c to 2½c per pound. Similar conditions to those of that year exist today. However, much greater quantities of foreign butter were received in 1914 as Finland and Siberia were at that time great producers and exporters of butter.

On Tuesday of last week, the market was weak and prices fell ½c. That was followed by a decline of 1½c on Wednesday and 2c on Thursday. On Friday and Saturday, it seemed that the bottom had been reached as trade picked up and values strengthened. Yesterday, however, there was a 2c decline and it was followed by a decline of 1@1½c today. Established quotations at the close today are as follows: Extras (92-score), 42½@43c; higher scoring than extras (93 score or higher), 43½@44c; firsts (90—91 score), 40½@42c; firsts (88—89 score), 39@40c; and seconds, (83—87 score), 33@38c. Selling prices of fresh Danish butter are 41@43c.

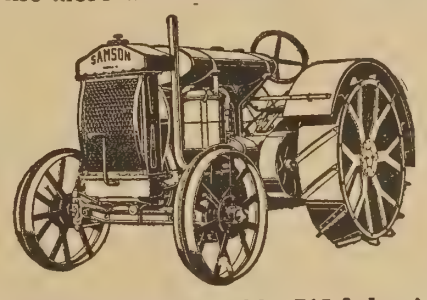
Home mixing of fertilizers gives more value for less outlay; and that's a good way to cope with old H. C. L.

Insure Your Farm Profits Now

Your profits, or loses, are the difference between the cost of operating your farm and the price you get for your products—nothing more or less.

Whatever the year's market value of your crops may be, you can make your profit larger by lowering the cost of production.

Wouldn't you like to save a large share of labor, horse maintenance and time that represent a large part of your present cost?



Wouldn't you like to be raising profit-paying products on the acres which you must use in raising feed for your horses?

Wouldn't you like to have fewer chores—do the necessary ones quicker and make life more worth while?

Wouldn't you like to have convenient, at all times, portable belt power for the numerous power jobs around your farm?

You can do all of these things and add to your profit and pleasure by using Samson Power Farming.

Thousands of Samson Model "M" Tractor users who made money last year can prove this truth. What they have done you can do. Begin now—it's up to you.

Write Today—Get the Benefit of This Experience

We have been in close touch with thousands of Samson farmers—we know how and why they made money last year—and will gladly give you this information. Drop us a postal card today—there is no obligation.

STOP SCOUR

STOP YOUR GREATEST PIG, CALF AND COLT LOSSES

THERE isn't a man raising live stock who hasn't had big losses from Scours in pigs, calves, and colts. Now is the time to insure yourself against this greatest of the breeder's losses.

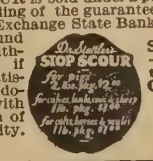
STOP SCOUR is not an experiment. It is not a theoretical formula prepared in an office for commercial purposes, but is the result of my many years actual practice of veterinary medicine.

INSURE THE COMING CROP

Give DR. STATTLER'S STOP SCOUR to your pregnant dams. Then give it to the offspring after it is born. Small doses will prevent Scours.

STOP SCOUR WILL CURE ANY CASE OF SCOURS WITHIN 12 TO 48 HOURS

STOP SCOUR is an absolute cure. If your pigs, or calves or colts are actually scouring, DR. STATTLER'S STOP SCOUR will cure the worst case. I have never lost a single case from Scours in my private practice.



STARVATION NOT NECESSARY

With DR. STATTLER'S STOP SCOUR, you don't have to reduce the ration. Feed just as usual.

DR. STATTLER'S STOP SCOUR is carried by your druggist or feed dealer. If he shouldn't have it, write us his name and address, and we'll see that you get it either through him or direct from us.

A POSITIVE GUARANTEE

STOP SCOUR is sold under a positive guarantee and the fulfilling of the guarantee is placed in the hands of the Exchange State Bank of Lanark, who agree to refund your money without question if you are not satisfied. You are doing business with an institution of known reliability.

Send No Money—We will send trial package C. O. D. Write us.

DAIRY SPECIALTY CO., Elyria, Ohio

Make Cleaner, Better Butter

THE drawn steel barrel of the Sturges Churn, heavily tinned and finished perfectly smooth inside, not only guarantees a lifetime of service but insures perfect cleanliness in better butter making. It is easiest to clean and keep sanitary. No corners to hold dirt or germs. Lighter in weight and easier to operate, it cuts down the labor of churning. Made in four sizes—there is a size that will exactly suit your requirements. Attractively finished in red and blue enamel. Just the churn for home use. Good dealers have Sturges Churns on display. See them and write for Circular No. 51X.

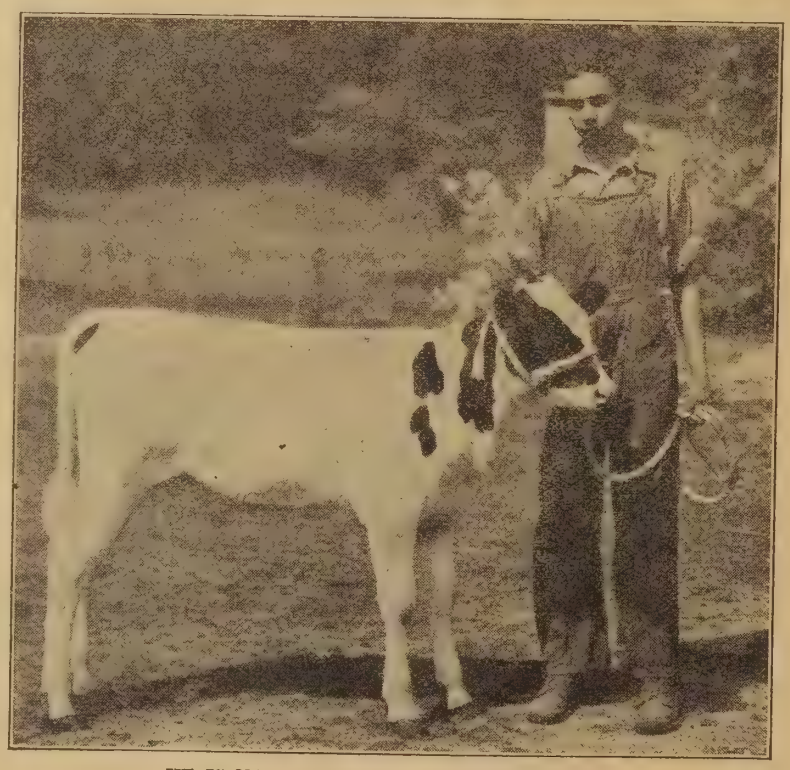
HOARDS DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY



An Essential on Every Dairy Farm

[Continued]

The juniors will remember that in our last story we were talking about the supplements that can be used for whole milk. At that time we decided that it would be poor policy to continue to feed whole milk after three or four weeks. Of course, we are willing to agree with any one who says that he can produce better calves by feeding whole milk for the first three or four months and we will grant that his calves will appear better than others fed upon skimmilk and other substitutes. But this we do know, and it certainly should be recognized if we want to raise our calves economically, that skimmilk calves will make a very satisfactory growth with the right care plus a proper hay and grain ration. And we dare say in addition that at the end of a year and half, it would be difficult to tell among a number of calves, some of which had been fed either way, which had been the whole milk fed ones. Considering the high price of milk fat and the small difference it makes in the development of the calf, we shall certainly advise skimmilk at the end of three or four weeks, where it can be had.

But there are many farmers who are selling their whole milk, either directly to the consumers or to condensed milk plants. They are not very liable to have skimmilk, hence it is quite possible that they will have to continue to feed whole milk entirely, or at best use some of it diluted with water, to which may then be added some oil meal, just enough to make a very thin gruel when well stirred in. Some have even advocated making a gruel consisting of equal parts of oil meal, blood meal, and hominy. It would be a fine thing if all of the calves could be raised upon whole milk for the first six months, but since that cannot be practiced under ordinary circumstances, we believe juniors should learn the next best thing to do. Cost of production should certainly be one of your problems. And still we must not practice an unwise economy. To substitute water at the end of the first month, supplemented with what hay and grain the calf has learned to eat, would indeed be a very bad practice. A calf requires feeds that are easily digested and that is why milk is so good for it. But hay and grain should not be withheld. In fact it is a good thing to encourage calves into eating grain feeds about the third or fourth week, by sifting a little bran or oil meal into the pail after the milk has been drunk. And, furthermore, it is a good plan to have some of it before them at all times. Following this they will learn to eat oats quite readily and even cracked corn is often relished by them as they get older. A mixture made of equal parts by weight of ground corn, wheat bran, and oil meal makes a very satisfactory grain ration and at the end of two months a calf will be eating from two to three pounds. Make it a rule to begin feeding a grain ration just as soon as a calf shows an inclination to want to eat it, and to find this out you will have to watch it rather closely. But the important thing is to see that the calf gets its regular daily grain ration, because it means a great deal as to its growth and proper development.

Calves will nibble at hay when but a week or so old, but they can't be expected to eat any amount of it until they are four weeks old and beyond. When they show any inclination to pick at it, they should be furnished with some of the very choicest of the clover hay you have in the barn. Clover and alfalfa are both far better than timothy or wild grass hays for calves. They are higher in digestible protein and both contain large amounts of calcium or lime, both of which are needed in young growing animals. Besides these two superior qualities, they are also more palatable than other hays. We always think that it is a good plan to look forward at haying time to the period when the calves begin to come, and consequently store some of the very choicest of the clover hay, perhaps some from the second cutting which is finer stemmed, where we can get at it easily. One can do this without very much trouble and from the standpoint of the calves it certainly is a paying proposition. Good hay should not be withheld from a growing calf if you want to make it into the best cow or bull.

HE IS NOT ASHAMED TO SHOW HIS CALF

Of course, no matter how choice the hay is you feed, there is bound to be some waste among the stems which it will refuse to eat. This coarser material should not be allowed to accumulate in the manger or feeding box, but on the other hand it should be frequently removed and fed to the horses or cattle. In this way there need not be any waste. But in any event do not leave it there for the calf to eat instead of furnishing fresh hay. If you do, he will go hungry and a hungry, discontented calf will not make rapid gains.

Every farm boy and girl knows that the cattle and horses of the farm must have salt and it is much better to have it before them all of the time. But many of us seem to think that calves are an exception to the rule and that they do not require salt until they are grown up. This is far from the truth. A little salt should be sprinkled in the feeding box occasionally and in that way he will learn to look for it. I have seen calves lick at salt when they were but two and three weeks old. Salt should never be withheld from the farm stock.

Many boys and girls think that because a calf is getting milk twice a day that he does not need any other kind of drink. This is far from true, too. If possible, water should be provided for them at all times where they can drink when they feel the need of it. And if you are raising a calf in the winter months, then it might be a very good plan to warm the water a little before offering it to him. Now all of these little details of which we have treated may seem to some of us of small importance, but as a matter of fact a good stock man will tell you that it is the regular attention to what seems to be the small matters that makes a calf hustle along toward maturity. Weights that show on an average of a pound for daily gain indicate at least that the calf is being very well cared for as far as feed goes.

And regularity should go with everything we have to do for the calf. Regular feeding hours are of prime importance and we should all cultivate the habit. Shortly ago, while reading a letter from one of our juniors, I noted that he brought his letter to a close because as he said it was time to feed his calf. I thought at the time that he had a very good reason, although I should liked to have received a longer letter from him.

But the right kind of feed alone cannot make a calf do its best. The kind of barn care it receives has a great deal to do with its development. We would like to suggest that the calves occupy the brightest and best ventilated part of the stable if there is any choice and there usually is. Fresh air and sunlight are both conducive to health and happiness of these little animals. Dark, damp, and ill smelling corners should be avoided, and, anyway, boys and girls, who wants to take care of a calf in places so dark that he cannot see how his pet is getting along from day to day? And then we would also like to suggest that the calves be given their freedom to move about as they please, which not only furnishes them exercise but helps to keep them contented.

Now, of course, in order to do all of this for bossy, there must be a special place provided for him. We like the box stall idea as well as any. A comfortable, roomy, well lighted box stall, kept clean and well bedded with fresh straw, is almost the ideal place for the calves for the first few months of their lives. In the winter we are almost compelled to provide good quarters for them and we believe that they are better off in the summer months as well in just such a place where they will not suffer the tortures of the flies.

This should not mean a steady confinement either. They should be allowed to run about for exercise and how they do enjoy it! Dumb animals usually respond to kind treatment. And do you suppose for one minute that if a calf was given the choice of close confinement or its freedom, it would choose the farmer? No, indeed, not if you know calves! Then why confine them in close quarters? Nature never intended that to be the case, so why practice it? The only time that I know of when calves should be confined is during feeding time and for half an hour or so following. And this, only as a matter of convenience in feeding each one and also to prevent the bad habit of sucking each other. Just apply close confinement to yourselves, boys and girls, while you are enjoying good health and then you will appreciate the case of the calf that is thus abused. And we have no patience with the fellow who says, "but I haven't room enough". Usually if that kind of a fellow was as good at getting busy as he is at making excuses, he would have the right kind of a place in which to bring up the calves. If you want to properly care for your calf, you must learn first of all what good care is and after that apply what you know.

Like all young animals, calves are subject to certain diseases. Perhaps the commonest one of all is scours or ordinary diarrhea. There may be several causes for this condition. Indigestion caused by a change of feed, too much feed, or the milk fed in dirty pails are among the chief causes. A little castor oil will often do the business in effecting a cure. An ounce or two should be sufficient. But if the case persists, it is best to call in a veterinarian. No calf should be allowed to be off its feed for any length of time. And if you have anything to do with a calf from the time of its birth, be on the lookout for what is known as white scours. This is almost a deadly form of diarrhea and if you want to avoid all danger, or at least eliminate most of the risk, see that the calf is born in a very clean place. And if this disease is known to have existed in the stable before, a good disinfectant should be applied to the quarters where the calf is to be born. White scours is frequently caused by certain bacteria entering the system of the new born calf through its navel before it is healed up. Several applications of iodine to

the navel will usually eliminate this danger. Prevention of this disease is about the only successful remedy. Calves that are affected will usually die within a few days, and if they do recover, they remain in a weakened condition for some time. Here, then, is a case where an ounce of prevention is worth a pound of cure.

Cost of Raising a Calf

Julius Luscher, who lives in Oregon, has kept some very instructive figures on the cost of growing a calf. His data are from the actual cost of raising his calf last year. Though the prices charged for that period are higher than at present, some good conclusions may be drawn from the costs given. It is possible to raise a calf more cheaply than by Julius' system of feeding but at any rate his ration insured the development of a well nourished calf. The real test of his care and management of his calf came at Salem and the Western International Show, where his calf was exhibited in the open classes and won third and fourth prizes, respectively. He won first in the club and open classes at the county fair. These winnings brought him $58 in prizes.

For the first three weeks he fed whole milk, 1 gallon per day the first week, 1½ gallons the second, and 2 gallons the third. This cost $7.87. For the fourth, fifth, and sixth weeks he fed his calf whole milk and a mixture of ground oats and mill run and as much clover hay as it would eat. The total cost of this was $11.00. By the end of twelve weeks the total cost was $35.00. Julius continued feeding whole milk until the calf was four months old. No skimmilk was available since the milk from the herd was sold at wholesale. At seven months the calf was put on pasture and received only oats and mill run in addition. The cost for this ration was $4.90 per month. From the twelfth to the eighteenth month silage was fed in addition to the other feeds. From the nineteenth month to the tweny-fourth month, clover hay, silage, and beet pulp were fed and also a grain mixture of mill run, oats, and oil meal. The total cost of raising this heifer to twenty-four months was $170.32.

Don't Forget

Suppose you received a letter with this address of the sender, Hill Crest Farm, Michigan. Would you know where your correspondent lives other than that he holds forth some where in Michigan on a farm known as Hill Crest Farm? You see the point is just this. The address is not sufficiently complete to locate him. We do not know where he receives his mail. There may be several Hill Crest Farms in that state.

Well, somewhere in Michigan there is a junior wondering why he does not hear from the Junior Department of the Dairyman. And I know of a few others, too, who have not received a reply because they have not given us the name of the town or city where they get their mail. Of course you did not intend to fail to give us your address completely. You just naturally were a little too careless. To us the address plainly written is one of the most important features of your letter. Try to be more careful about this in the future. It is one of the mistakes that there is little excuse for.

Junior Letters

Hoard's Dairyman Juniors:—I am twelve years old and am in the Freshman class in high school. My father owns on 80-acre farm on which we live. We milk twelve head of cattle. Four of them are registered. I own a calf which is related to Tilly Alcartra. I drive a team four miles to school. I shuck corn on Saturdays. I would like to have some of the juniors write to me. My address is R. R. 1, Burchard, Nebr. Leonard Basley.

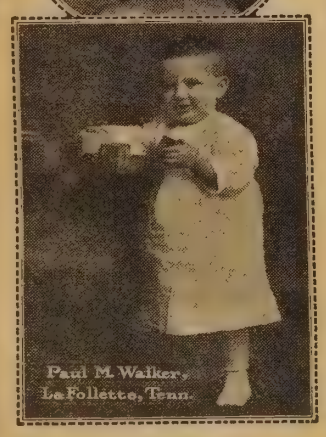
Hoard's Dairyman Juniors:—I am 12 years old and in the sixth grade. I live on an 84-acre farm. My brother and I have two rabbits. We have a dog, one old cat, and four little kittens. We have 20 head of cattle, 8 calves, 8 milk cows, 2 heifers, 1 steer, and 1 pure-bred bull. We have 9 head of horses, 4 geese, some chickens, and some pigs. My letter is getting long so I guess I'll close. Wishing all the juniors good luck.
Iowa. Harold Lewis.

Hoard's Dairyman Juniors:—I am interested in the juniors and read the junior page every week. I am 10 years old and in the 5th grade. I live on a 60-acre farm. This year we had 8 acres of oats, 4 acres of barley, and 6 acres of potatoes. It rained so much out here that some of the oats and barley rotted in the field. We had a fine yield of potatoes; we got over 1,500 sacks, but there is no market for them.

We have 25 cows, 4 horses, and some chicken, ducks, and rabbits. My brother has 14 pigs. I am also raising Duroc-Jersey pigs. We are feeding ensilage this winter.

Back of our farm are the foothills of the Cascade Mts. There is a little village one-half mile away from our farm and a larger town where my brother goes to high school. We live near the Pacific Highway. It has been recently paved, but will not be open for traffic until about Christmas.

Well, I will close, wishing the juniors good luck. My address is Box 63, Route 6, Mt. Vernon, Wash. Earl Anderson.



Hoard's Dairyman Juniors:—I live on an 80-acre farm. We grow corn, cotton, alfalfa, and wheat. My father has 6 head of horses, 6 head of registered Holstein cows, and a 3-year-old registered Holstein bull. My brother, older than I, has a registered Holstein heifer. I am going to buy a registered Holstein calf. I have $40 saved up.

I go to school at Verden. They have a good school there. My teacher's name is Miss Vineyard. I ride 3 miles in a Ford car to school. I have a white cat but I haven't any dog.
Oklahoma. Clifford Lane.

The rows at the right were not fertilized.

Good fertilizers always pay

There never was a time when good fertilizers, with any kind of a fair chance, didn't pay for themselves and leave a profit besides. And especially now good fertilizers extend a helping hand toward off-setting declining prices by increasing yields.

Furthermore, by increasing the number of bushels per acre good fertilizers cut down the cost of production. They produce and they save—they earn at both ends. They are an investment in *crop insurance!*

A A C Fertilizers, under whatever brand you may know them, are *good* fertilizers. Their formulas represent years of indefatigable study of soils, plant life and plant foods. In co-operation with practical farmers, our chemists and agronomists are continually making field tests in various sections. Let them suggest the fertilizers which will grow the largest and most economical crops on *your* soil.

Consult us on any matter pertaining to crops and soil fertility. When writing ask for booklet on *"How to Get the Most out of Fertilizers."* It's free.

If there isn't an A A C agent near you, we want one. Write for the agency.

Michigan Creamery Meeting

The annual meeting of the stockholders of the co-operative creamery at Litchfield, Mich., was held Saturday, February 5, 1921. There was a very good attendance, about fifty being present. All agreed it was one of the most interesting meetings in several years. President L. R. Lindsey gave a short review of the important things accomplished during the past year. J. D. Hawkes, treasurer, gave a detailed report of receipts and expenditures and also a report showing the company to be in a safe and sound financial condition.

Manager Bater showed the business of 1920 as compared with the year previous as follows:

	1919	1920
Pounds butter made	623,637	667,538
Amount received for butter sold	$369,691.62	$397,001.59
Expenses	20,677.55	25,902.53
Average price paid for butterfat, cents	69	69
Cost of making a pound of butter, cents	3.3	3.88

The cost of making a pound of butter in 1914 was 2.66 cents. The 1920 cost of 3.88 cents is an increase of only 46 per cent.

Interesting talks were given by Claire Stoddard of the Food and Drug Department and Claude Grove of John W. Ladd Company. At the election of directors for the coming year the following were chosen: L. R. Lindsey, H. W. Denham, A. F. Anderson, J. D. Hawkes, M. Wade, F. N. Sherk, and Fremont King. The board of directors re-elected L. R. Lindsey, president; H. W. Denham, vice-president; A. F. Anderson, secretary; and J. D. Hawkes, treasurer. C. S. Bater was hired again as manager and F. C. Mergenthaler as buttermaker for the coming year. With the above efficient and experienced officers and employees the company looks forward to another successful year.

Michigan. C. S. BATER.

When You Build

Grouped under the name Ruberoid you will find a line of asphaltic weatherproofing products of the highest quality. These products should be used in every building which is expected to give complete and permanent protection from the elements.

Ruberoid Products reflect a manufacturing experience and laboratory control of nearly forty years. There are many roofs on which Ruberoid Roll Roofing has served for over a quarter of a century with the limit of its endurance yet to be established. This is one example of the high quality which is the birthright of every product bearing the name Ruberoid.

The majority of dealers who sell Ruberoid Products have handled them for many years. They are unusually well informed regarding the quality of the products, the purposes which they serve and the manner in which they should be used. This knowledge, combined with the highly developed merchandizing policy of the Standard Paint Company, enables every Ruberoid distributor to give his customers service which is not excelled in the building industry.

When you build or repair be sure to use Ruberoid Weatherproofing Products.

THE GREAT UNITED LINE FARM MACHINES

Keep Horses Well

The reason so many work horses are unfit for work in the spring is a clear case of poisoning. When they are worked on warm spring days, the pores have an unusual amount of broken down tissue to eliminate. Unless the skin is in condition for the pores to function freely, waste matter gets into the system, causing loss of vitality, to which colds, pneumonia and other horse ailments are directly traceable.

Clipping in the spring puts the skin in fine condition and is cheaper than veterinary bills or renting horses to take the place of sick ones.

$14 buys a Stewart No. 1 Ball Bearing Clipping Machine from your dealer, or from us by sending $2 with order and paying balance on arrival.

Get More Wool

With wool at present prices you can't afford to leave any on your sheep. Hand blade shearing leaves uneven cuts and ridges—it can't do a smooth job. Stewart machines shear even, leave a uniform stubble, and get 15% more wool. Quickly pay for themselves—any one can use them.

The Stewart No. 9 is a ball bearing, hand operated machine—costs but $22.

Catalog No. 69 shows both hand and power operated machines. Write for it.

Articles of Incorporation of Oregon Dairymen's By-Products Corporation

(Continued from page 181)

and of the proceedings of its meetings and to present a full statement at the regular annual meetings of the stockholders, showing in detail the condition of the affairs of the corporation;

2. To supervise all officers, agents, and employees and see that their duties are properly performed;

3. To cause to be issued appropriate certificates of stock in accordance with paragraphs sixth and seventh of the Articles of Incorporation;

4. To install such a system of bookkeeping and auditing that each stockholder may know and be advised from time to time fully concerning the receipts and disbursements of the corporation.

ARTICLE VI

Officers

The officers of the corporation shall be a president, first vice-president, second vice-president, secretary (treasurer), together with any other administrative officers whom the Board of Directors may see fit in its discretion to provide for by resolution entered upon its minutes.

The Board may appoint assistant secretaries, in its discretion, and may delegate to them any or all of the duties of the secretary hereunder or any other duties.

The compensation and tenure of all officers shall be fixed by the Board of Directors.

The secretary (treasurer) need not be a member of the Board of Directors.

ARTICLE VII

The President

If at any time the president shall be unable to act, the first vice-president shall take his place and perform his duties and if the first vice-president shall be unable to act, the second vice-president shall act and if the second vice-president shall be unable to act, the Board shall appoint a director to do so. The president or such vice-president or director shall

1. Preside over all meetings of the stockholders and directors.

2. Subject to the advice of the directors, direct the affairs of the corporation.

3. Call the directors together whenever he deems it necessary.

4. Sign, as president, or vice-president, all certificates of stock, and all contracts, notes, checks, and other instruments when so directed by the Board of Directors.

5. Discharge such other duties as may be required of him by these by-laws or by the Board of Directors.

ARTICLE VIII

Secretary (Treasurer)

It shall be the duty of the Secretary (Treasurer):

1. To keep a record of the proceedings of the meeting of the Board of Directors and of the stockholders.

2. To keep the corporate seal and the books of blank stock certificates; fill up and countersign all certificates issued and affix said corporate seal to all papers requiring a seal.

3. To keep a proper stock transfer account and stock ledger showing the name of each stockholder of the corporation, the number of his certificate and date of issuance, surrender, cancellation, forfeiture or transfer.

4. To receive and deposit all funds of the corporation to be paid out only on checks as hereinbefore provided and account for all the receipts, disbursements, and balances on hand.

5. To furnish a bond in such form and in such amount as the Board of Directors may from time to time require.

6. To execute and sign all contracts, notes, papers, and documents as Secretary only and to control only financial accounts as Treasurer.

7. To serve all notices required either by law or by the by-laws of the corporation and in case of his absence, inability, refusal, or neglect so to do, then such notices may be served by any one person thereunto directed by the president or a vice-president of the corporation.

8. To act as secretary of the executive committee.

9. To discharge such other duties as pertain to his office or may be prescribed by the Board of Directors.

ARTICLE IX

Executive Committee

The Board of Directors shall appoint an executive committee of five members from among its members, determine its tenure of office and its powers and duties. The president shall be ex-officio one member of the said executive committee.

The executive committee shall have such duties and powers as may from time to time be prescribed by the Board of Directors and these duties and powers may be all of the duties and powers of the said Board of Directors, subject to the general approval and control of the Board of Directors.

Said committee shall hold office at the pleasure of the Board and shall receive such additional compensation as the Board may direct; and they shall keep accurate records of their proceedings and shall report monthly to the Board of Directors.

Said committee may meet and vote upon any subject within their powers at their dis-

SOW SALZER'S SEEDS

If you had thousands of dollars invested in your own equipment for testing the seed you use you could not get better seed than you get of Salzer without a cent of extra cost.

cretion and in any manner, by telegraph, telephone, or otherwise, provided, however, that all matters, other than ordinary commercial details, be finally set down in writing, and that all votes shall be recorded, when all members are not present in person, in the minutes of the said committee; and be signed by the members thereof. In any event, three affirmative votes shall be necessary in order to adopt any motion or approve any proceedings of the executive committee.

ARTICLE X

Auditing Committee

The Board of Directors may appoint an auditing committee, from among its members, determine the number of its members and its tenure of office. The Board may prescribe rules and regulations with reference to the manner and form in which claims shall be presented against the corporation and the manner of auditing the same and in lieu of such action by the Board, the auditing committee may prescribe rules and regulations with reference to its meetings and procedure. A semi-annual audit shall be made by a certified public accountant and an annual report shall be filed by him with the Board of Directors prior to the annual meeting.

ARTICLE XI

Zoning Committees

The Board of Directors of the corporation may create zoning committees of members in the various districts of Oregon. The directors shall designate the districts and the number of members for each such zoning committee and the method of selecting the members thereof or the Board of Directors may itself select and appoint the members thereof. The Board of Directors shall determine the term, duties, functions, and privileges of such zoning committees.

ARTICLE XII

Books and Papers

The books of the corporation and such papers as may be placed on file by vote of the members or directors shall at all times during business hours be subject to the inspection of the Board and of any stockholder or his representative, duly authorized in writing.

ARTICLE XIII

Location of Office

The principal office and place of business of the corporation shall be at Portland, Oregon, and the corporation may, at the discretion of the Board of Directors, also maintain offices at such other places as may be expedient.

ARTICLE XIV

Proxies

Any stockholder shall be permitted to vote at any meeting by proxy, which proxy shall be in writing, executed by the stockholder in the manner and form required or permitted by law.

ARTICLE XV

Manager

The Board of Directors may in its discretion appoint a manager, who shall hold office at the pleasure of and on terms and conditions set by the Board of Directors. Any director, officer, or other person may be elected to serve as manager. The manager shall perform such duties as may be directed by the Board of Directors.

ARTICLE XVI

Borrowing Money

The corporation shall have the power, by affirmative vote of at least thirteen directors, to borrow money or to authorize the executive committee or the manager to borrow money for any corporate purposes on open accounts or upon any assets of the corporation in such amounts and upon such terms and conditions as may from time to time seem to them advisable or necessary.

ARTICLE XVII

Offices Held by Directors

One director may be elected to fill only one office on the Board of Directors of this corporation. Any director may hold the position of manager, in addition to any elective office hereunder, or may be employed by the corporation in any capacity, under any terms; but no such employment shall become effective unless so determined by the vote of at least fifteen (15) members of the Board of Directors.

ARTICLE XVIII

Officers May Resign

Any director or other officer may resign his office at any time, such resignation to be made in writing and to the effect from the time of its acceptance by the Board of Directors.

In case of the absence of any officer of the corporation, or for any other reason that the Board may deem sufficient, the Board may delegate any or all of the specific powers or duties of such officer to any other officer or to any director for a stated time, provided that a majority of the entire Board concur therein.

ARTICLE XIX

Certificates of Stock

(1) Certificates of stock shall be of such form and device as the Board of Directors may direct; shall be signed by the president or a vice-president and countersigned by the secretary or an assistant secretary and the certificates of each class of stock shall express on their face the number, date of issuance, the number of shares for which and the person to whom they are issued, and the substance of such other appropriate provisions as appear in paragraphs sixth and seventh of the articles of incorporation of the corporation.

(2) The certificate books shall contain a margin on which shall be entered the number, date, number of shares, and name of the person expressed in the corresponding certificate.

ARTICLE XX

Transfer of Stock

(1) Shares of the corporation may be transferred at any time subject to the provisions of paragraphs sixth and seventh, of the articles of incorporation, by the holder, or by his legal representative by endorsement on the certificate of stock. But no transfer shall be valid until the endorsed certificate has been surrendered.

(2) A surrendered certificate shall be cancelled by the secretary before a new one is issued in lieu thereof, and the secretary shall preserve the certificate so cancelled, as a voucher. If, however, a certificate is lost or destroyed, the Board of Directors may order a new certificate issued as may be by law permitted.

ARTICLE XXI

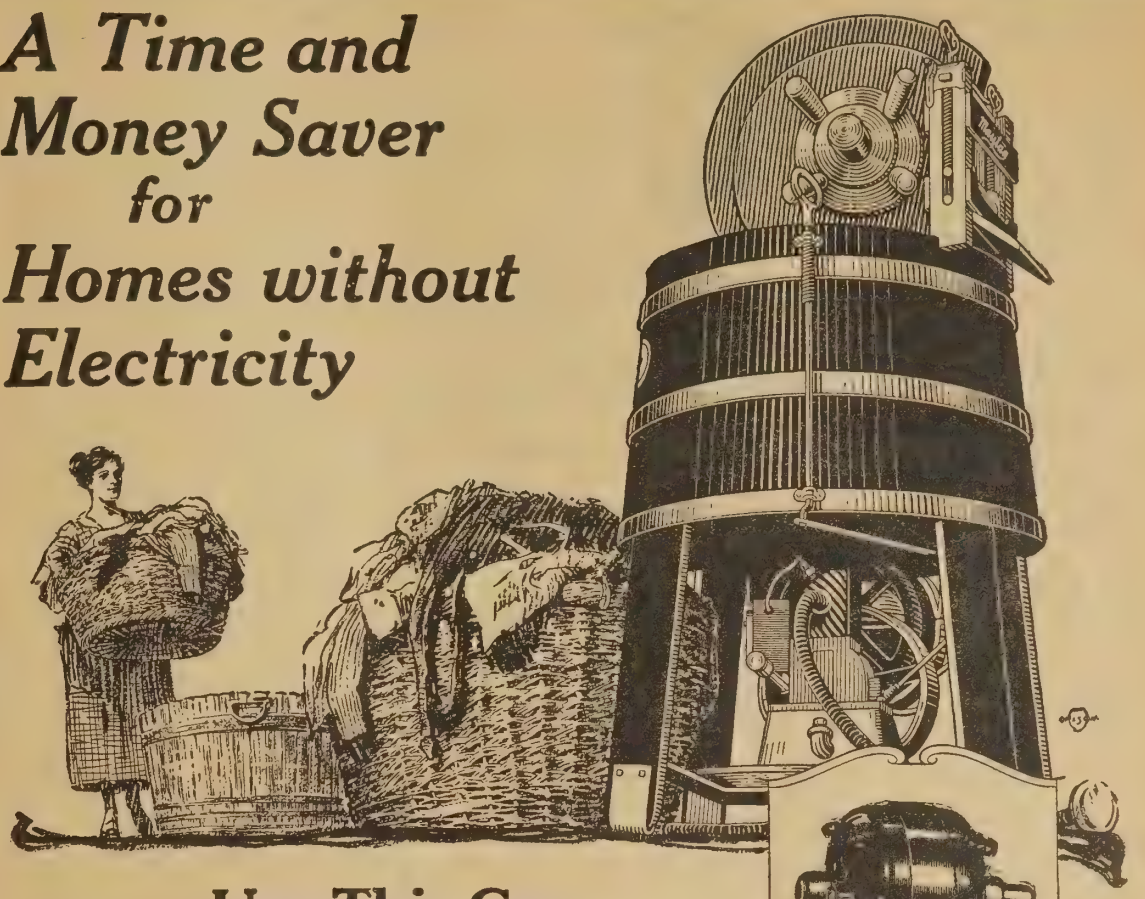
Sec. 1. Annual Meetings. A regular annual meeting of the stockholders shall be held at the office of said corporation at 2 o'clock P. M. on the last Wednesday in December of each year after 1920, for the purposes of electing a Board of Directors and transacting such other business as may come before the meeting.

Sec. 2. Special Meetings. Except where otherwise prescribed by law or elsewhere in these by-laws, a special meeting of the stockholders may be called at any time by the president or by a majority of the Board of Directors. Each such call shall be in writing and shall state the time, place, and the purposes of such meeting. No business shall be transacted at a special meeting other than as is stated in the purposes for the call.

Sec. 3 Notice of Regular Meetings. Notice of each regular meeting of the stockholders shall be given. Such notice must state the time and the place of meeting, and that the purposes thereof are the election of a Board of Directors and the transaction of such other business as may come before the meeting. A copy thereof shall be mailed to each member of the corporation, as his address shall appear upon the books of the corporation, at least ten days prior to the time for holding such meeting.

Sec. 4. Notice of Special Meetings. Notice of each special meeting shall be given by mailing to each stockholder a copy of the call for such meeting, as his address shall appear upon the books of the corporation, at least ten days prior to the time fixed for such meeting.

Sec. 5. Quorum. At any meeting a majority of the issued and outstanding capital stock present in person or represented by proxy shall constitute a quorum for all purposes, including the election of directors, except when otherwise provided by law.



ARTICLE XXII

Amendments

These by-laws may be altered or amended at any annual meeting of the stockholders or at any other meeting of the stockholders called for that purpose by the directors, by a vote representing a majority of all of the issued and outstanding capital stock.

The Duroc-Jersey breeders of Waupun County, Wisconsin, have organized a county association for their breed of hogs. At a recent meeting F. R. Constance was elected president; Wm. Wied, vice-president; and Floyd Dunn, secretary-treasurer.

A Time and Money Saver for Homes without Electricity

Use This Gas Power Washer Indoors

Today it is important that economy be preached in many homes. Do not overlook the saving a Maytag Washing Machine will make possible. Clothes, table linen, bed linen, etc., washed in the Maytag, last much longer. This gas power washer does anything our finest electric will do and it has the advantage that it is absolutely portable. The little air-cooled gas engine that runs it is part of the machine.

You can wash in the house—on the porch—under a tree—in the shed—anywhere. Handles all kinds of clothes quickly and economically. Has a three-way swinging reversible power wringer. Merely feed the clothes through it. Costs little to buy and little to run.

Any one can operate it. A demonstration is all you need. If you do not recall the local dealer, write us at once. Thousands now in use.

For homes with Electricity

For many years the Maytag Wood Tub Electric has been a tremendous favorite. It is the same in every respect as the Maytag Multi-Motor save that it is operated by a modern electric motor. Has a three-way, swinging reversible power wringer. You merely feed the clothes through it.

Wisconsin Honors Four Farmers

A LIFETIME of unselfishness brought honorary recognition by the State of Wisconsin February 4 to three Wisconsin farmers and one Illinois agriculturist.

David Imrie of St. Croix County, Robert Hall of Oconto County, and R. J. Coe of Jefferson County, Wisconsin, and Eugene D. Funk of McLean County, Illinois, were awarded testimonials of appreciation by the regents of the University of Wisconsin upon the recommendations of the faculty of the College of Agriculture.

In introducing David Imrie to the assembly of farmers Dean Russell referred to his record as a pioneer exponent of co-operation among farmers. About a quarter of a century ago, Mr. Imrie organized the first co-operative creamery in his section of the state, and aided in the organization of three similar creameries within the next few years. At about the same time the only concrete silo in Buffalo County was being erected on Mr. Imrie's farm, while today the county boasts of hundreds of these structures. After his venture with organized creameries he bought his 320-acre farm in St. Croix County where he now lives. As a member of the Farmers' Institute force, as a breeder of pure-bred live stock, as a factor in the development of the Wisconsin Live Stock Breeders' Association and kindred organizations, Mr. Imrie has been a splendid force among Wisconsin farmers and their interests.

"In his community he stands for model farming, better home life, and more entertainment for the settler," were the words with which Dean Russell presented Mr. Hall. Mr. Hall has been a farmer for only about fifteen years, and yet his character and ability as a pioneer farmer in Oconto County has earned him a high place among Wisconsin community leaders. "Boys and girls of his community regard him as their leader not merely because he is so ready with his violin at their school functions, but because he has just proven to be their good friend in all things," said Dean Russell. Pure-bred seed corn and alfalfa are Mr. Hall's specialties. He is a settler who has made a splendid success under typical Northern Wisconsin conditions not only on his farm, but through his influence as a community leader.

E. D. FUNK
DAVID IMRIE
R. J. COE
ROBERT HALL

Conspicuous among horticulturists of the state is R. J. Coe, and, in commenting upon his contribution to the state's farming interests, Dean Russell pointed to his fine leadership among fruit growers and nursery men of the state. For eighteen years farmers have heard him lecture from the farmers' institute platform and for several years he led the State Horticultural Society as its president.

Occasionally Wisconsin honors at its recognition exercises a man who has done conspicuous work in other states. This year Eugene D. Funk, whose development of good strains of corn and other grains has brought recognition from all parts of the nation, was included in the honorary list. He occupies the farm which has been in the family for three generations.

Preliminary approval of a loan of $10,000,000 to a group of American banks to finance the exportation of condensed milk and similar products to Great Britain and Europe was announced February 9th by the war finance corporation. This was the first application for loan approved by the corporation since its revival last month.

Are the hotbeds and coldframes ready for the advance on next spring's gardening?

A New Commissioner of Agriculture in New York

HOARD'S DAIRYMAN:—After the resignation of former Commissioner Wilson of the Department of Agriculture there was but little doubt who would follow in that office and that man was George E. Hogue. Those who have attended the meetings of the dairymen's association for some years will remember him as a man who always had an interest in all the proceedings. It is true that he took a more active part when the subject of cheese making came up and always showed the most familiarity with it of any man present. Several times have I heard him say that he got his first real inspiration in farming from an address of the late Governor Hoard.

Mr. Hogue was born on a farm in Cattaraugus County. He obtained a good education for the farm boy of those days. He taught rural school in winter and worked on the farm in summer as have many other farm young men. Later he became interested in the cheese business and after a time he had several factories, making at one time a million and a half pounds of cheese annually.

It was while in the cheese business that Mr. Hogue undertook farming for himself. He bought a farm that was in a run-down condition, the cost being not far from twenty dollars an acre. The farm is a hill farm, and the buildings were somewhat old and run down. It was the plan from the first to make the farm pay for itself, pay repairs and improve in respect to fertility. There was the debt for the purchase price and for the cows, but to carry out the program mentioned above the cows must be had. Nothing else could win on that program. There was about 200 acres of cleared land. The place could hardly carry twenty cows but they were placed there. Their average production did not exceed 4,000 pounds of milk. After twenty years the buildings have been remodeled, water is in abundance wherever needed; there are forty cows and the average production has been advanced to 7,000 pounds. Mr. Hogue has demonstrated that a man may, with the application of good judgment, making use of scientific methods, he says, make farming a paying proposition. This has been his aim. The farm is worth double the original purchase price.

To supervise a large farm and make it pay while conducting a cheese factory business requires exceptional executive ability. Nor is that all in most cases, not even in the experience of Mr. Hogue. It requires a vast amount of hard work. Mr. Hogue claims that it requires study as well. The midnight oil was burned for study as well as for work. He attended institutes, read books and papers, and above all he got an inspiration from an address by the late Governor Hoard at one of the state dairymen's conventions.

Other farms were bought and now there are five of them, fifteen hundred acres in all. One farm has purebred Holsteins and calves are raised here for supplying all the other farms. There will be periods of depression, remarks Mr. Hogue, but dairy farming for a term of years is a safe investment. Young men should be encouraged to take it up. Not only does he believe in dairying for the young man, but he deplores the older ones leaving entirely and cutting themselves off from the farm. They may live in town but it is fortunate when they keep control of the business of the farm and manage it to their own advantage and good health and the interests of good farming.

Mr. Hogue has had other experience than that of farmer and cheese manufacturer. As village president, member of the school board, bank director, etc., there was training for larger positions. He helped to reorganize a defunct railroad and put it on a paying basis and has since remained secretary and treasurer of it. Not so long ago he became the president of the State Dairymen's Association and shortly after was appointed chief of the bureau of dairy industry in the department of which he is now the head. As commissioner, he becomes vice-president of the state fair commission and a trustee of the Geneva Experiment Station and of state college at Cornell. His business and executive ability are unquestioned and it would seem that he may have an opportunity to make the agricultural department of the state something of which the farmers of the state may feel proud.

New York. H. H. LYON.

Downward Tendency in Cheese Markets Still Evident

[Report by U. S. Bureau of Markets.]

The present tendency in cheese markets as indicated by trading during the week ending February 5 is downward. Business in general is reported very dull. A number of lots of cheap cheese in certain eastern distributing markets were sold and some styles which were temporarily in particular demand were cleared at primary markets. However, these sales, especially the latter group, were made at very close margins. Taken as a whole, trading was irregular for all markets did not share alike in the dullness.

Lower Markets Not Unlikely

Information received at primary markets in Wisconsin seems to indicate that buyers are now fairly well stocked and the feeling persists that another dull period may come during which time buying will be limited to securing goods for immediate needs. This attitude is supported by rumors that offerings at country points have been made at lower figures than a continuation of present prices would warrant. Comparatively little fresh cheese, part of which is on consignment, is reaching eastern markets. New York State country markets remain so high that they do not attract much buying interests from distributing markets under existing conditions.

Some of the New York factories which have been closed during the winter are reported as having opened again, but it is also reported that condenseries in some sections are resuming operations, and are condensing instead of making either butter or cheese. Accordingly, there is no definite basis at this time upon which to anticipate production in that section during the immediate future. Some complaints have been made regarding the poor quality of a part of the new cheese now reaching the markets.

The average wholesale prices on American cheese (style Twins) for the week ending Feb. 5, 1921, and for the corresponding week last year, were as follows:

	Week ending Feb. 5 1921	1920
	Cents	Cents
New York	27.7	31.2
Chicago	24.5	29.9
Boston	25.0	32.2
San Francisco	22.7	27.2
Wisconsin	24.4	29.2

The total receipts of American cheese at these markets were 3,305,039 lbs. as compared with 1,916,511 lbs. for the corresponding week last year and 2,605,828 lbs. for last week.

The Milking Machine for 1921!

Sensational Improvement!

Costs Half; Does Double Work

The *new* PAGE Milker — operated by hand—one man milks 2 cows at once. Little work—quickly done—easiest of all machines to handle—easiest by far, to clean; the most wonderful advance in milking machine manufacture.

Costs Nothing To Install—

Not a cent of installation expense—no engine, no motor, *nothing! Just* the machine for herds of 12 to 16 or 20 cows. For large herds get our electric or engine power outfits at $225 and up.

You milk right into your own ordinary milk can; no extra pails; no pipes; no pulsators; no tanks. Amazingly easy to clean.

Guaranteed to do the work.

Guaranteed to save time.

Guaranteed—the last word in sanitary milking (one creamery wrote us that the most sanitary milk came from farmers using the PAGE Milker).

And!—

Guaranteed:

Action alterable to suit every cow separately. Instantly adapted to any cow according to her disposition and how easily or how hard she milks.

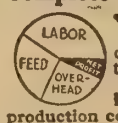
Bigger Barn Profits for You in 1921

—THROUGH A SERVICE THAT MEETS YOUR PERSONAL NEEDS

PORTER Barn Service is increasing production and cutting production costs for thousands of practical farmers. It includes one of the finest and most thorough barn planning departments to be found anywhere, but it is much more than that—it is a personal, specific, barn efficiency service, through which the knowledge and co-operation of trained field men are at your disposal, without cost or obligation.



¶ These barn experts have made a special study of the barn subjects in which you are vitally interested—the things that cut your production costs and increase net profits:

—how to increase milk yields from 10% to 20% by proper watering
—how to preserve the valuable liquid manure and reduce barn cleaning costs to a minimum
—how comfort and cleanliness affects milk yield and feed consumption
—how to prevent feed waste
—how to care for the cows at calving time and the care of sick animals
—how to handle the herd bull safely and easily
—how to ventilate the barn
—how to put the hay crop in the barn with speed and economy
—how to hang the barn doors to make them water-proof, trouble-proof and snug.

¶ If you will check the above subjects in which you are particulary interested, giving us brief information with regard to your barn, number of head of stock housed, etc., we'll cheerfully give you the information at our command or have the Porter field man call upon you if you so desire. Absolutely no obligation—this is a part of the free Porter Service.

PORTER
"Dependable Since Sixty-Eight"
Complete Modern Barn Equipment

YOUR barn is your "farm-profits" meter; your crops, livestock, dairy products, labor—all pass through the barn.
The man who will make money in 1921 will be the man who cuts production costs. The place to start is the barn. The solution is labor-saving, cost-cutting equipment—PORTER EQUIPMENT.
These Porter products will make money for you this year if you'll put them to work for you.

Steel Stalls	Ventilators
Steel Stanchions	Hay Tools
Steel Pens	Friction Hoists
Drinking Bowls	Barn Door Hangers
Litter Carriers	Garage Door Sets
Feed Carriers	Barn Plans

SIMPLE METHOD OF SMOKING MEAT

By L. D. Johnson

In a few minutes anyone can smoke in a season's supply of meat without bother or loss. The secret is in using Wright's Smoke, which may be applied quickly, easily and cheaply with brush or cloth. Wright's Smoke is made of smoke from selected hickory and gives a delicious flavor. It saves 20 pounds out of every 100 by preventing shrinkage. If you want delicious smoked meat at less cost and less trouble, get a bottle of Wright's Smoke from your druggist today—big bottle $1.25. For sugar-curing meats you can do away with the trouble of mixing the ingredients and save time and money by using Wright's Ham Pickle, which contains all the necessary ingredients in proper proportions. Simply mix a bottle with 27 pounds of salt, which will cure a barrel of meat.

Get these genuine, guaranteed Wright Food Products from your dealer. If he can't supply you, write E. H. Wright Co., 847 Broadway, Kansas City, Mo., for free booklet.

The Human Side of Cow Testing

(Continued From page 171)

operations, his stove poker poised in the air. "Now," he said earnestly, "I understand what you mean by one of those main-tain-ance rations." This I recognized as the opening wedge to better rations for the Dean dairy herd, and I tried to make the most of the opportunity. After dinner, the fire spreading its cheery zone of comfort, we sat about the stove discussing dairy feeding as I had thought never would be possible. I held to my resolve to speak as plainly and simply as I could, finding substitutes for or at least explaining when I had to use them, most of the scientific terms usually found in dairy feeding literature. Before we were through I helped Charley arrange a nicely balanced ration for his herd and, though at times it taxed my ingenuity, I believe I did not once use the words concentrates or carbohydrates.

Our discussion lasted until Dean scarcely had time to take me to the next place on my route before milking time, but when I left him he was as interested as possible in feeding his cows better. In time he, too, will learn the meanings of all those words in the books and bulletins and in college professors' lectures, but it was much more important that he become interested in better feeding first.

The result of that Sunday's work has made me especially happy; for not only did I succeed in starting another man on the road to better methods, but I also learned something that I hope to make useful to me as long as I live. I believe I shall never forget my "parable of the stove". After this I am going to talk to the ninety and nine. The one is usually in a pretty good position to take care of himself anyway. As ever,

HORACE EVANS.

March 18.

DEAR MIKE:—The cow tester must never get the idea that he is dealing solely with the farmer. His success depends quite as much upon how he conducts himself with the rest of the family, even to the baby. Let him get off on the wrong foot in the house at his first visit to a place and he may spend a year catching step at the barn. Moreover, the women folks are frequently the real motive power behind the adoption of improved methods; the man, of course, being perfectly willing to take the credit when complimented for his progressiveness. From my observations as a cow tester, and he gets to see the farm family the most intimately of any extension worker, I should say that there is usually a good, strong mainspring in every successful farmer's home. Sometimes this mainspring is the man. More often than she gets the credit for, it is his wife.

In Phil Overton's case the situation is a little different. Here the family and farm life revolves about Albert, a fine sixteen-year-old boy, the only son of Mr. and Mrs. Overton. Of this boy the parents are unusually, almost insanely, proud. It seems, too, that as a baby Albert had a narrow escape from death in their burning home, being rescued in a heartrending scene which neither parent ever has been able to forget. As a result they have always been exceedingly thankful to have their boy with them, and very solicitous of his wishes and welfare. Just how he has remained as fine a lad as he is under these circumstances is a marvel, yet he is anything but spoiled. He is greatly interested in dairying and he and I, finding so much in common to talk about, are good pals. Through him, also, is the most

effective way that I can reach his father. Anything that the boy wants is all right with Mr. Overton, so I have a double reason for keeping on close terms with Albert.

Albert, in fact, was responsible for his father entering our cow testing association. He had read in farm papers many times of the advantages of these associations, and when he heard of the movement to organize one at Plainfield induced his father to attend the organization meeting, where he signed up for the year. Even then Phil was not inwardly any too enthusiastic over the proposition; he was acting largely for his boy's sake.

When on my first visit to his farm, I felt that Mr. Overton was not especially interested. The boy, however, seemed eager to know as much as possible about my work, so I made the most of that. The testing operations interested him very much, and I took pains to explain the various steps of the Babcock test to him, letting him assist in some of the minor things like whirling and washing the bottles.

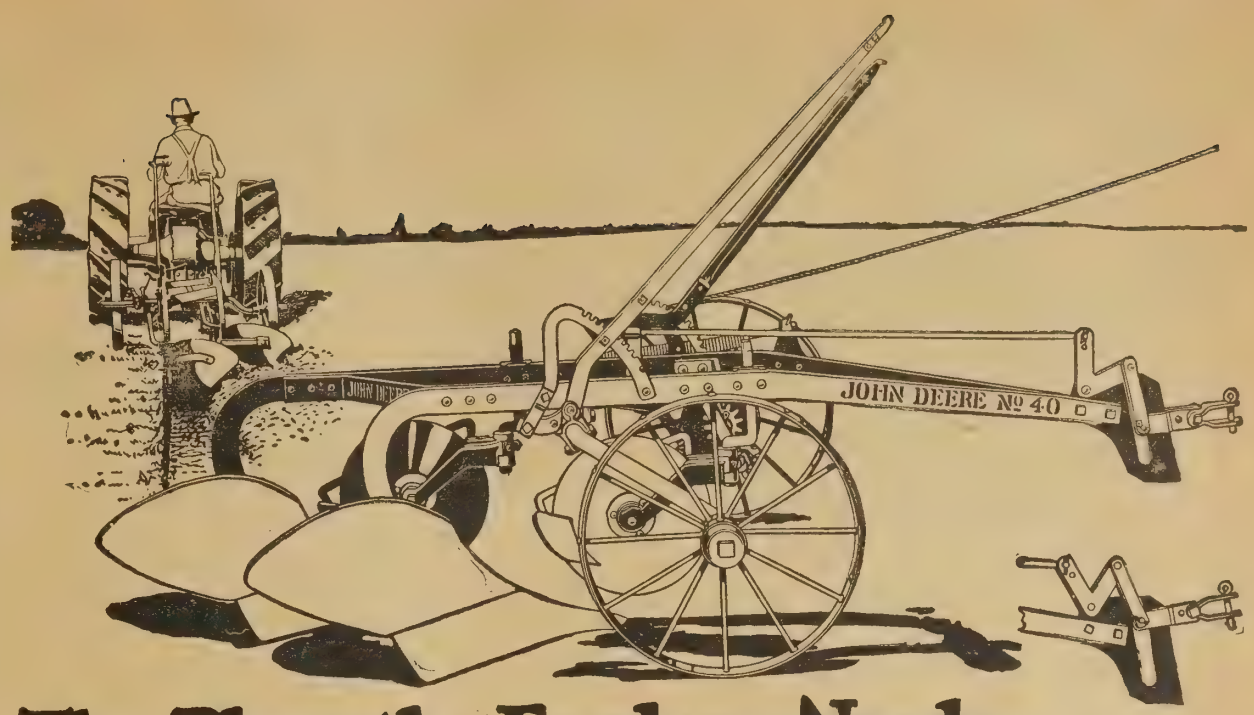
It was a day of real sport for Albert, and of lessened labor for me, though I did not know how well I was building until noon, when the boy enthusiastically told his father of my work and the results of the morning's testing. He had the facts all straight, and as I saw that Mr. Overton was becoming really interested I kept still and let Albert go the limit. Under the circumstances he was doing far better than I could hope to do, and before he was through his father began to think that perhaps the cow tester was worth his salt after all.

There is scarcely a herd in the association where my suggestions have since resulted in greater improvement in care and general management than in that of Phil Overton; and this has been accomplished by being careful all along to get Albert interested and converted to my way of thinking before saying anything to the proprietor. By a few simple changes in the rations last fall the milk production of the herd was increased twenty per cent in one month, while a first class registered sire has just replaced the varicolored bull formerly in service. It begins to look, too, as if the Overton farm skyline might be improved by a silo before another corn harvest. Albert is a constant reader of the dairy bulletins and farm papers, and for a boy has a pretty good idea as to what constitutes good dairy methods. All that he lacks is a little confidence to urge their adoption upon his father, but we two working together are making a good showing in the Overton herd.

Among other things I interested Albert in attending the two weeks' short course at the University this winter. He had just returned from this trip when I tested at Overton's last week, and a more enthusiastic boy and father I never saw. At the short course Albert had absorbed all the dairy information that he could pry loose in so short a time, learning among other things to test milk. He had already gotten his father thoroughly waked up to the big possibilities in enlightened dairy management, and it did my heart good to hear the two talk over their plans for the future. Were I a betting person I'd risk some money that they will win out, too. Now that Albert has learned how to test milk and keep his own records, perhaps I shall soon be losing one of my most interesting stopping places. But in this case I shall not mind. It is enough for me to know that I had a hand in heading Phil and Albert the right way. As ever,

HORACE EVANS.

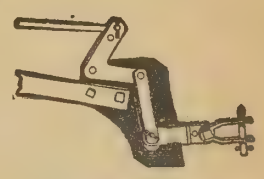
(Editor's Notes:—These are the third and fourth of a series of six letters prepared by Frank M. Chase. The next will appear in an early issue.)



15 Cows the Equal of 60

In the Holstein herd at the University Farm of Minnesota, 15 cows returned as much last year as 60 of the average cows of the state. The 15 averaged 18,799.5 lbs. milk containing 623.8 lbs. butterfat. The superior productions of the cows on the University Farm are credited to their being pure-breds and to the fact that they have been given excellent care. Three of these Holsteins averaged very close to 800 lbs. of butterfat. The milk of four of them if retailed at 13 cents a quart would have returned a total of $4,900 for the year.

In the University Farm herd two Jersey cows each produced this last year enough butterfat to be equivalent to more pounds of butter than either of them weighed, the milk production of 11 ranging from 5,663 lbs. to 12,187 lbs. A junior two-year-old set a new butterfat record for her breed in the state.



Five Guernseys in the herd produced from 10,124 to 13,878 pounds of milk containing from 461 to 611 lbs. of fat.

Two cow testing associations have been organized in Fairfax County, Virginia, and nearly 1,000 cows are being tested. One of the things which added interest to this work was a demonstration of the value of complete milking. One of the testers demonstrated that the first milk drawn may contain as low as .8 per cent fat and that there may be as high as 10 per cent of fat in the strippings.

The Plow the Fordson Needs

UNUSUAL light weight and light draft plus great strength; genuine John Deere bottoms that insure good scouring, long wear and good work; unusual ease of operation, and a self-adjusting hitch that automatically maintains proper line of draft are important features that make the John Deere No. 40 the plow the Fordson tractor needs.

Any plow for the Fordson needs a self-adjusting hitch. Only the John Deere No. 40 has it. Views above illustrate how this hitch automatically maintains the proper line of draft.

JOHN DEERE No 40
The PLOW with the SELF-ADJUSTING HITCH

The frame parts of the No. 40 are made of John Deere new-process steel—an extremely hard, tough steel, combining unusual light weight and great strength.

The No. 40 weighs no more than the average horse-drawn sulky plow.

Its beams are guaranteed not to bend or break. This guarantee is stamped on the beams.

Frame connections are hot-riveted—no loose joints. You are sure to appreciate the rigidity of this plow.

Pulls extremely light because of the good scouring qualities and high grade construction of its John Deere bottoms; and its light weight, self-adjusting hitch and rigidity of frame. Only when you see this plow at work can you fully understand how light draft it is. It's a real fuel saver.

Simple, positive, power lift—it works perfectly and is long-lived.

The self-adjusting hitch on the John Deere No. 40 is an important and exclusive feature.

Because of this hitch the proper line of draft is maintained automatically as depth is varied with the depth lever — bottoms have the proper suction at all times—no "nosing in" or "hopping out"—no bumpy furrows.

Be sure to see the John Deere No. 40, if you have planned to buy a Fordson. Remember, no tractor plowing outfit is better than its plow, just as no knife is better than its blade. The plow is the "business end" of the outfit. It makes the seed beds—the source of your profits. Start right with your Fordson by getting an especially good plow—the John Deere No. 40.

Write today for a free folder illustrating and describing the John Deere No. 40. Ask, also, for our big free book, "Better Farm Implements." Its 114 pages have valuable information for you. Address John Deere, Moline, Illinois. Ask for Package F-514.

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Bloody Milk

Every conscientious, up-to-date dairyman tries his best to safeguard the milk of his cows against contamination, that it may be pure and acceptable to the consumer, and safe for calf feeding. When blood is seen in milk at the time of extraction, or forms in clots in bottles, cans, setting pans, or the separator bowl, the dairyman naturally is much concerned and at once tries to trace the trouble to its source.

The most common cause, as he doubtless is aware, is rupture of minute blood vessels in the udder from extreme pressure or congestion of blood just after calving. In a previous article it was stated that bloody serum or blood often is found in the tremendously congested udder just before birth of a calf, so it is not strange that this condition sometimes persists for days or weeks after calving.

When first milk is bloody, protein-rich rations should be withheld, light laxative feed allowed, and milking done three times daily. In addition it is well too give the heifer or cow a dose or two of Epsom salts in warm water to loosen her bowels. For this purpose 8 to 16 ounces of salts is usually sufficient and many follow the laxative with half ounce doses of saltpeter (nitrate of potash) dissolved in the drinking water once or twice daily. Local treatment consists in bathing the udder frequently with hot water containing an ounce of Epsom salt to the quart.

Profuse bleeding into the milk cisterns of the udder often follows a severe blow, kick, or other injury and requires different treatment from that given in cases of congestion at calving time. Cold applications may give the better results. A mixture of equal parts of cold water and vinegar may be applied three times daily and if that does not suffice cold water containing a tablespoonful of powdered alum to the pint may be tried. At the same time the cow, if not advanced in pregnancy, should be given one teaspoonful of dried sulphate of iron and three of table salt once daily in her feed. This dose may later be given night and morning, if that is found necessary. If the cow is pregnant it is safer to slightly acidulate her drinking water with dilute sulphuric acid.

In many instances the cause of clots of blood in set milk, or of pure blood coming from a teat at the end of the milking process, is the presence of growths within the opening of the teat or higher up inside the teat duct. In some cases bloody milk is noticeable at milking time so that the quarter to blame may be determined, but where small clots of blood are deposited from milk in the setting pans, or are found in the separator bowl, it may be necessary to set a sample of milk from each teat of the suspected cow to determine which quarter is affected.

Growths in the opening of the teat may be removed by operation, but that cannot so perfectly or safely be done as regards those higher up in the duct. These possibly may be removed by cutting through the wall of the teat when the cow is dry, but when the cow is in full milk and much blood comes from growths irritated by the act of milking, it may be best to allow a calf to nurse or "dry off" the milk secretion in the affected quarter.

It occasionally happens that red discoloration of set milk, thought to be due to bleeding, really is caused by the growth of a germ known as *bacillus prodigiosus*, present in the milk vessels. This micro-organism must be done away with by more careful sterilization of all milk utensils, using pure washing and cooling water, and maintaining sanitary conditions in stables and all milk handling places.

Ringworm

I bought a bunch of steers in the fall and, when I got them home, found one of them had some kind of a scab. I hadn't had him long until some young stock I have got it, too. As near as I can describe it, it is a gray scab that starts mostly around the eyes, nose, and ears and spreads all over the body, resembling somewhat the ringworm except that it goes in a solid mass all over the body instead of like the ringworm.

Brandywine Summitt, Pa. E. W. Z.

Ringworm is most common among stabled cattle at this time of the year, but it is possible that the bought steer introduced true parasitic mange (scab). However, we should advise treating for ringworm as follows: Isolate affected cattle, cleanse, disinfect, and whitewash the stable. Saturate

Barren Cows

Must Be Made to Breed or Your Dairy Business Will Be a Failure. They

Can Be Made to Breed

By the use of

Hood Farm Breeding Powder

We say this confidently because it has been used with such marvelous results by so many breeders. Every cow at Hood Farm is treated with the Breeding Powder, and we know that it does make barren cows and heifers breed; we know that it checks and prevents abortion; we know that it makes cows clean quickly, thereby saving us hundreds of dollars annually.

Order today, mentioning this paper.

Prices prepaid $1.15, $2.75 and $5.00. Flexible Injection Tube, by mail, 90c. Mammoth size Breeding Powder and Tube, prepaid, $5.75.

C. I. HOOD CO., Lowell, Mass.

Her Comfort is Your Gain

TO neglect any discomfort of the udder or teats is costly. The slightest soreness or abnormal condition makes the cow restless and reduces the flow of milk.

Cuts, Chaps, Scratches, any congestion or inflammation can be quickly cleared up by using Bag Balm, the great healing ointment for cows. Caked Bag is promptly reduced by this softening remedy. A great aid in treating Bunches and Cow Pox.

Bag Balm, in the liberal 65c package, is inexpensive insurance against serious troubles. Keep a package on hand. Sold by general stores, feed dealers and druggists. Booklet, "Dairy Wrinkles," Free.

FLEMING BROTHERS, 265 Union Stock Yards, Chicago

spots on skin daily with sweet oil or cottonseed oil until it proves possible to remove scabs and crusts by scrubbing with soap and hot water. When this has been done apply tincture of iodine twice daily to spots on face and rub iodoform powder into spots on upper eyelids. Saturate spots on body once a week with a solution of 4 ounces of sulphate of copper (bluestone) in a pint of hot water.

When Heifers Should Freshen

What is the proper age for heifers of the different breeds to freshen and if they freshen too young will they ever make as good cows later?

Is it liable to be difficult to get cows with calf when not bred for three months after calving? What is the general practice among dairymen in this respect?

Wilder, Ida. W. I. T.

It is usual to have well developed heifers calve when two years old or a trifle over that age. If heifers are so fed and cared for, however, that they are immature for their age, breeding should be delayed until they are in fit condition. Heifers that are not stabled and fed may also be bred later than 16 to 18 months. If breeding is delayed when heifers are well fed they may become "shy breeders" or periods of heat may cease occurring. This is most liable to occur in the case of animals of the beef breeds. Cows do not as a rule come in heat until about four weeks after calving. They may be bred then but most dairymen breed to have calves arrive at that time of the year which they prefer. In some instances cows come in heat a week to ten days after calving, but it is not considered wise to breed them at that time. Where trouble has been experienced in getting cows in calf, they should be bred as soon after calving as possible. Delayed service may lessen chances of conception.

Butter Prices for January

January saw butter decline from five to nine cents a pound, the latter figure being registered in Chicago and Philadelphia.

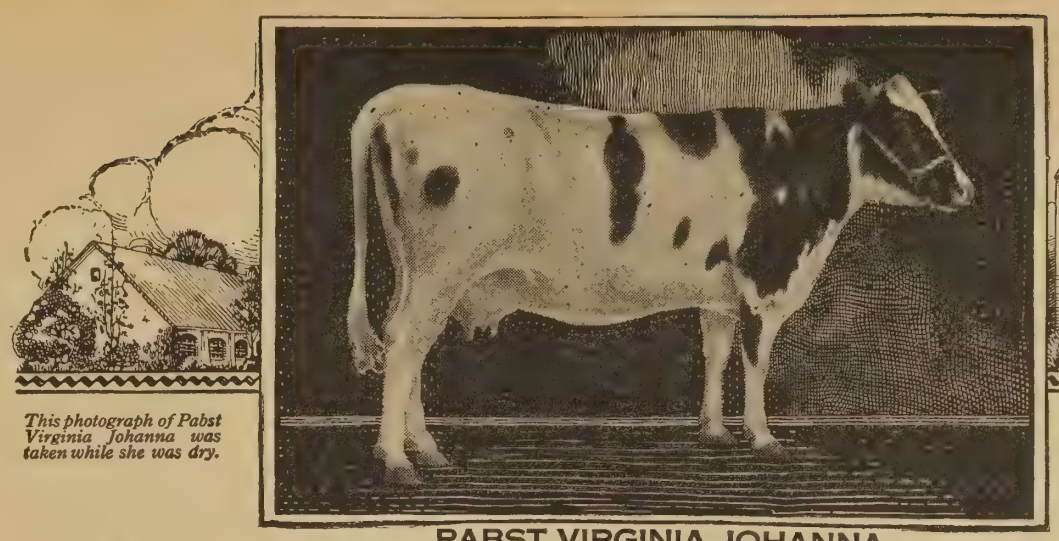
From the daily quotations of the U. S. Bureau of Markets, we have compiled the following table giving the monthly averages of the daily wholesale prices for January, 1920 and 1921, on 92-score butter (extras) in the four principal markets, together with the receipts of butter at these markets:

	Average price		Receipts	
	Jan. 1921	Jan. 1920	Jan. 1921	Jan. 1920
	Cents	Cents	Tubs	Tubs
Chicago	48.45	62.58	134,059	134,204
New York	52.63	64.75	161,342	157,259
Boston	52.50	64.88	49,633	42,879
Philadelphia	52.98	64.88	43,330	43,517
Total receipts			388,364	377,850

Ninety-score butter averaged 44.94 cents for January on the Chicago market, with centralized butter at this market selling for 46.76 cents. During this month the spread between extras and 90-score is only three and a half cents, which is considerably less than has been the case in the recent past and is somewhat contrary to the general discussion of the present market conditions. It is asserted by condenseries that much of their butter is selling for six to ten cents under the market because they have no regular outlet. The figures do not seem to indicate that this generally obtains.

Jobbers' prices on extras sold to retailers during January averaged 50 cents in Chicago and 56 cents in New York.

Dairy Exports and Imports



During the calendar year ending December 31, 1920, there were 15,993,725 lbs. cheese imported into the United States; with the exports totaling 16,291,319 lbs. Of the imports Argentina supplied nearly ten million pounds, France a million and a half pounds, with Italy, Holland, Switzerland, and Canada each supplying over 800,000 lbs. Of our exports the United Kingdom took over five million pounds, Sweden a million and a half, Cuba nearly three million, and Mexico something over a million.

During 1920 we imported 37,454,172 lbs. butter and exported only 17,487,738. Denmark supplied nearly twenty million pounds of our imported butter, Canada over nine million, Argentina over four million, and Holland over three million pounds. Of our exported butter Belgium received over five million pounds, and the United Kingdom near four million pounds.

England's import of butter from all sources totaled nearly two hundred million pounds for 1920, and this is reduction of sixty per cent from her importations in 1913. The Market Reporter says:

"Although the discrimination against butter during the past several years has kept down butter prices in that country, many of England's convenient sources of supply have been shipping their butter to other markets. Perhaps the most important result of the Food Ministry's policy, however, has been the substitution of oleomargarine for butter. As a result of this substitution the people of England at present are actually consuming more edible fats than under pre-war conditions."

Have you talked with your neighbors about subscribing for Hoard's Dairyman? Why not do it now? Make up as large a club of subscribers as you can and send them in.

This photograph of Pabst Virginia Johanna was taken while she was dry.

PABST VIRGINIA JOHANNA

Pabst Virginia Johanna, Junior two year old daughter of King Pontiac Champion has just completed a 305 days' record of 15229.5 lbs. of milk and 752.7 lbs. of butter, a *world's record* in this class.

This promising heifer is one of over 110 daughters of the noted Century Sire in the splendid herd at Pabst Stock Farm. Mr. Fred Pabst's 1350 acre farm at Oconomowoc, Wisconsin is a model of dairy farms, both in buildings and equipment—and in the magnificent herd of high producing cows, developed under the personal management of owner, Mr. Fred Pabst.

A WORLD'S RECORD *this time*

A Junior 2 Year Old World's Record Made on Pabst Stock Farm With a Pine Tree Milker

ONE after another come reports of new records made by cows milked by the Pine Tree.

State records, county records, now a WORLD'S record, and a 10-month record at that. A long trying test which called for every ounce of skill in feeding and milking—the acid test of a milking machine!

Great breeders, who formerly entrusted their test milking only to the most skilled herdsman, now put implicit faith in Pine Tree.

Nearly 50 high producing Holsteins are milked 4 times daily by the Pine Tree in the great test barns at Pabst Stock Farm. For over two years, in 4-time-a-day service, Pine Tree has never failed. Read Mr. Pabst's letter at the right.

Think it over, Mr. Dairyman! What does the Pine Tree's success in test milking mean to you? Maybe you're not after records. But you *are* after more milk. Breeders like Mr. Pabst are taking no chances in milking for production records. Their is no guessing in their work. When they use Pine Tree in their test milking you can bet they are getting more milk or they wouldn't be doing so.

The fact that the cost of machine milking is only one-half of that of hand milking is recognized by every dairyman. These records are the final proof that Pine Tree also increases production.

Send today for our booklet on Pabst Stock Farm and their recent records. Learn how great breeders save money in test work and make greater records with Pine Tree. Your copy is Free—write for it TODAY!

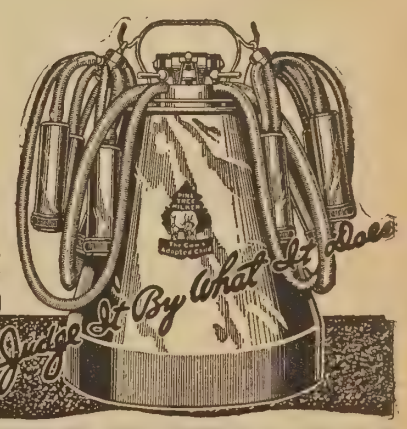
Pine Tree Milking Machine Co.
2843 W. 19th St., Chicago, Ill.

Gentlemen:—

I take great pleasure in stating that the Pine Tree has been in use here for about two years. It has given us absolutely no trouble, and has helped to do work which we could not have done at the time labor was scarce.



We are using your machine on many of our test cows. Pabst Virginia Johanna, as a Junior 2-year old, made 15229.5 lbs. of milk and 752.7 lbs. of butter in 305 days, which so far is the world's record. Pabst Pontiac Aaggie made 25972.3 lbs. of milk and 1175 lbs. of butter in 365 days, being milked on your machine. Yours very truly,

PABST STOCK FARM
Fred Pabst

Fairbanks-Morse "Z" Farm Engines

We feel that it is up to us as farm engine manufacturers, to go the limit in attempting to bring prices and conditions back to normal.

The farmers of America today need every possible help so that farm equipment costs will more closely meet the lowered return from products sold.

That the "Z" Engine is an essential factor for bettering farm conditions has been proven. Over 300,000 engines have been bought by farmers from over 6000 reputable dealers.

After full consideration—without regard to costs of engines now completed in warehouses of our 26 branches, we have decided upon this big price reduction. Even present costs of labor and raw materials have been ignored.

There is a "Z" dealer near you who will be glad to prove that the "Z" Engine is supreme as to materials—design—workmanship.

So if you can use one or more engines on your farm to lighten your labor, to help you get more work done, this is the time to buy.

REDUCED

"In Every Respect"
says the Good Judge

You get more genuine chewing satisfaction from the Real Tobacco Chew than you ever got from the ordinary kind.

The good tobacco taste lasts so long—a small chew of this class of tobacco lasts much longer than a big chew of the old kind. That's why it costs less to use.

Any man who has used both kinds will tell you that.

Put up in two styles

W-B CUT is a long fine-cut tobacco
RIGHT CUT is a short-cut tobacco

Weyman-Bruton Company, 1107 Broadway, New York City

A Movie in the Making

(Continued from page 170)

nently successful financially, yet fail miserably if he neglects even one essential point. It teaches that the health of the family is vastly more important than a well filled pocketbook. It ends happily with Mary restored to perfect health and beauty and back among her loved ones where there is health, peace, plenty, and great happiness. It is believed that all dairymen who see these vivid scenes enacted on the screen will not only consent, but will insist that their dairy herds be tested for tuberculosis. The film will be ready for distribution about January 1st and will be loaned free of charge to all agricultural associations that can make good use of it.

THE GOVERNMENT MOVIE MEN AT WORK

The Cow Testing Association

(A Poem in Free Verse)

Membership should be free.
Somebody, i. e., somebody else should pay the tester
And board him
And feed his horse
And buy his do jiggers.
Each member should have the highest record cow each month.
Also the high herd average.
These facts should be published.
The tester must be very gentlemanly
Give us valuable advice.
He must not smoke
Or chew
Or shock the children
Or pour acid in the kitchen sink.
But when his testing is done,
He will clean our stables,
Wipe our dishes,
And his own feet.
Regale us with humorous anecdotes.
Tell us how superior we are to other dairymen,
Also our cows.
Then shall the people arise
And revile him
And can him
"For why," say they,
"Should this youth presume,
To know more about our cows even than we ourselves?"
The gall of him!
Selah.

A Former Secretary.

Padded cell 13, Idaho Mental Hospital.

A number of notable records have been completed recently by Ayrshire cows on the Gossard Breeding Estates in Indiana. Five aged cows have made records averaging 16,757 lbs. milk containing 635.47 lbs. fat. The ten high cows averaged 15,282 lbs. milk containing 591.38 lbs fat. The average of the 33 cows which have completed records is 12,664 lbs. milk containing 484.03 lbs. fat. Twenty-three of these cows have made records at less than mature age.

Uncle Ab says he'd rather be a healthy hobo than a millionaire with a misery.

A Postal Card Brings it FREE

If you want to know what the interest is on $984 for a year and seven months—or the value of 769 bus. of grain at $1.72 a bushel—or how many rods of fence it will take to fence in any of your fields—then this handy Calculator will tell you the answer in a jiffy.

We will send every farm owner free and postpaid a copy of this valuable book that answers these and hundreds of other farm problems. We will also send free our new catalog on

SQUARE DEAL FENCE

The Fats Fight

(Continued from page 169)

"Spread thick, it still represents a saving". No doubt about it! Many dairymen are proving it every morning.

As surely as water runs down hill, the public will continue to buy in the cheapest market, unless we dairymen can put it over by a red hot advertising campaign that our fat is superior, so very superior, so supremely superior, for growth and health, that it is worth many times the difference. Put it up to the mothers of America and the world. Will you rear your families on a man-made food or a mother-made food, for that is what milk is?"

Dairymen to Fight for Markets

At a mass meeting held recently in Rock County, Wisconsin, more than fifty dairymen publicly pledged themselves to use no butter substitutes. Bravo! That begins our campaign in the best possible place, right in the home of the dairyman himself. There are 6,500,000 farm families in the United States. If all of them had the real butter habit, or, what is better yet, had the horse sense, I mean the cow sense, of the Rock County farmers, we would see butterfat soaring. When our very bread and "substitute" is endangered maybe we will develop enough commercial sense to stand together, lest we fall together. Let us capture the markets in our own kitchens.

Not the politician but the advertising expert is the Moses to lead us out of our economic Egypt into a land flowing with milk and honey. We must agitate and educate, and advertise everlastingly. The National Dairy Council, working through the various State Councils, is the right vehicle. Every shoulder to the wheel! Pocket books wide open! We'll win the fight of the fats.

A New Dairy District in Oregon

HOARD'S DAIRYMAN:—A new dairy district is developing in Lake County, Oregon, where the states of Oregon, Nevada, and California join in the midst of a great range live stock country which has been known as the last frontier. Irrigation development in the past few years in the Goose Lake Valley has brought in hundreds of new settlers to cultivate the small irrigated ranches which produce alfalfa abundantly. These settlers have come from other irrigated districts where they have sold their more valuable land in order to start again in a new district. Settlement has been rapid the past year, many ranches having produced forty to fifty bushels of wheat per acre which were still in sagebrush last March. Experience has proven that, in the early stages at least, these new settlers should milk dairy cows to provide a steady source of income from the forage grown while developing their farms. The usual experience is that in the succeeding years one of the most profitable means of marketing alfalfa is through the dairy cow.

Many of the settlers coming during the past two years brought cows with them and others are interested in securing dairy stock. There is already an efficiently managed creamery at Lakeview, the county seat, and one of the Lakeview banks has indicated its interest in dairy herd improvement by purchasing a pure-bred Holstein bull of high producing stock for the use of farmers in one neighborhood.

One of the most beneficial influences being brought about by those interested in dairying is an appreciation of the silo. Although it had been recognized for four or five years that the silo was as economical for the range man as for the dairyman, there was not until this year a single silo in the entire borders of Lake County, a county as large as the entire state of New Jersey. This winter there are eight, four of which are owned by dairymen and the other four owned by range men who received their stimulus from the assurance with which the dairymen set about to provide themselves with a pasture under cover. All the silos are filled with sunflowers, which are feeding out satisfactorily.

Developments in Lake County are of interest in that they are significant of the progress being made along the lines of a more stabilized agricultural practice in many western districts.

Oregon. F. L. BALLARD.

MILK 10509 Lbs. FAT 586 Lbs.
Average of 175 R. of M. records made by Ayredale cows. Forty R. of M. records made in 1920 by 16 two-year-olds, 4 three-year-olds, 1 four-year-old and 19 mature cows average 10,596 lbs. milk, 586 lbs. fat. With 16 two-year-olds bred at Ayredale in the 1920 lot, they equal previous records made largely by mature cows.
This 1920 performance is pleasing, because it proves our herd sires are breeding on and up.
Bulls and bull calves from above cows for sale. They insure big cows that are big profitable producers. To save correspondence, I would appreciate an inquiry from you giving age, color and priced bull you wish to purchase.

P. G. WARMINGTON, Honey Creek, Wis.

Cottonseed Meal—Cheapest Protein Source

"Cottonseed meal at the present time is the cheapest and most economical source of protein on the market." With this statement, Dr. G. S. Fraps of the Texas Agricultural Experiment Station draws attention to the value of this cotton by-product feed in the ration of the dairy cow.

It must be recognized that cottonseed meal may not be cheaper than some other feeds when other ingredients than protein are considered. For example, corn is selling at a lower price per ton and is even higher in its content of digestible nutrients. For the purchaser of feeds who needs to add to the carbohydrate value in his ration corn is, therefore, even cheaper than cottonseed meal. However, on the great majority of dairy farms protein must be purchased and carbohydrates are in good supply. This fact gives special value to Dr. Frap's recommendations relative to purchasing cottonseed meal. He brings out very strongly the advisability of choosing a high protein content meal. He says: "In purchasing a feed to supply protein, the feeder should consider the cost of the protein instead of the cost of the feed by the ton. The freight on a low protein feed is the same per ton as the freight on a high protein feed, which results in the cost of the freight being more per pound of protein in the low protein feed than in the high. This is one reason it is cheaper to buy a high protein feed than a low protein feed. The difference increases with the distance the feed is shipped. For this reason the cost of one pound of protein in 43 per cent cottonseed meal should be less in a northern state than the cost of one pound of protein in 36 per cent cottonseed meal."

The fertility value of cottonseed meal is strongly brought out in the following statement: "When one considers that the fertilizer value of cottonseed meal is equal to its feeding value at the present time, one concludes that a farmer who can save 70 per cent of the fertilizing value will get the feeding value at only 30 per cent of the cost. Cottonseed meal is used extensively as a fertilizer in the South by direct application to the soil, but it is worth a great deal more to the farmer who first feeds it and then saves the manure and saves 70 per cent or more of its fertilizing value. The farmer who secures two values for the feed has an economic advantage over the one who puts it to only one use and secures only one value."

Hired Man's Board Bill

Even the board bill of the hired hand has not escaped the attention of the U. S. Department of Agriculture statisticians. The Bureau of Crop Estimates has collected figures indicating that in the South Atlantic states and in the South Central states board by the month is valued at about 50 cents per day. This conclusion is reached by subtracting the average wage paid to men who are given their board from the wage when men "find themselves". In the North Central states and east and west of the Mississippi, the hired man's monthly board bill is nearly $5.00 higher, being $18.60 east of the Mississippi and $20.16 west. In the North Atlantic states it is yet higher, averaging $23.62, and in the far western states highest of all, being $26.22, or 77 per cent higher than the charges in the south. It is stated by departmental officials that such allowances as those for firewood, milk, etc., somewhat modify these figures.

"The world stands aside for the man who knows whither he is going" and how can anyone know where he's going unless he has a record. Make a budget and keep accounts.

Baton Rouge Farmers Form Organization

Dairy farmers in Baton Rouge, Louisiana, met January 18th and organized the Baton Rouge Milk Producers' Association. They propose to improve dairying in that section by co-operating in the selling of their milk and in the further adoption of improved dairy methods. Every member is pledged to keep records of the individual production of his cows, feeding them according to their production, and to grow more and better dairy crops. All but a few of the members have pure-bred bulls at this time and those who now have grades will purchase pure-breds at an early date. The members are interested in the production of a high quality milk. Their herds have already been tested for tuberculosis and the barns are mostly modern and kept in sanitary condition. George L. Gayden was elected president of the association; W. H. Ballis, vice-president; and E. C. Jefferson, secretary-treasurer.

Offer Bull Calves sired by sons of *Pontiac Korndyke, Hengerveld De Kol, Pontiac Dutchland, or Admiral Walker Pietertje.*

Do you want a Pontiac in your herd?

PONTIAC STATE HOSPITAL, Pontiac, Mich

Sons of a 36-lb.—1315-lb. Sire

They are sons of Dutchland Creamelle Denver Prince. His sire is a 30-lb. 1,028-lb. grandson of Colantha Johanna Lad and his dam, the highest record daughter of the same sire, with 36 lbs. in 7 days, 1,315 lbs. in a year.

They are from tested (records up to 20 lbs.) and untested dams — Good producers rich in the blood of Mooie Mutual De Kol and King Segis Pontiac.

The calves are from 2 to 8 months old. Priced right.

Jefferson County Asylum, Jefferson, Wis.
W. E. Voigt, Supt.

Bull Ready For Service

Nicely marked and a good individual. Dam 20 lbs. butter at just 3 years. Next dam a 23-lb. 4-year-old. Two nearest dams of his sire average over 32 lbs. and ten nearest dams over 29 lbs. in 7 days Not a break in a three-generation pedigree. Priced to sell. Call or write

Halsey J. Sedgwick, Limeridge, Wis.

Mr. Holstein Breeder—

You are Invited to

Pinehurst Farms

at any and all times. Come if you want a herd sire or foundation females. Come if you don't want to buy. We believe you will be interested in Sir Ormsby Beauty Pontiac Segis and his get and in our herd of producing females, many of them now doing very well on 7-day and year test.

You will be welcome and remember if you should buy from us, we stand back of every animal sold.

Pinehurst Farms Co., Sheboygan Falls, Wis.

Cows and Heifers

A Few Good Bulls

Because I am overstocked, I am offering some very good registered females for sale. They either have A. R. O. records or are from A. R. O. dams.

Can also offer some excellent young bulls by a 33-lb. sire and from A. R. O. dams with records up to 28 lbs.

Every animal sold is guaranteed to be as represented.

Write or come and see for yourself.

J. D. McDonald **West Salem, Wis.**

BUY DIRECT

Reasons for Buying Holstein Cattle in Waukesha County

1. You can buy direct from the breeder through the breeders' association, organized by the breeders to promote the breeding of more and better Holstein cattle and to assist in a fair marketing of the same.
2. There are over 50 pure-bred Holstein sires in service in Waukesha County whose dams have records of over 30 lbs. butter in 7 days or 1,000 lbs. butter in a year.
3. There were 1,307 long-distance tests made on Holsteins in Waukesha County during the past year, which is more than the total in the next four leading counties in the state.
4. There are more tuberculin tested cattle in Waukesha than in any other county in the world.
5. The breeders' organization is in a position to put you in touch with "bred-for-production-stock" at reasonable prices.
6. When buying through the Association, you obtain the services of men who devote their entire time to the Holstein industry. It saves you time. You get more for your money.

DISPERSAL SALE

75 Head REGISTERED HOLSTEINS 75

SALE—Dairy Cattle Congress Pavilion

Waterloo, Ia., February 23rd

Sale Commences 10:00 *Sharp.*

Mack, Baxter & Scott—Auctioneers

10 Daughters of King Segis Pontiac Combination. A bull who stood at the head of the old Wm. Galloway herd, and was a consistent prize winner with his show herd. A bull who has proven himself by his daughters who have been tested. He combines the type that we are looking for today with production.

There will also be 15 cows in calf to him. He has had little chance to distinguish himself in the herd where he is now, because of the fact that Peck Brothers never did any testing.

Here's the opportunity to buy type at your own price and increase the price of the animal by the record that you put on it. King Segis Pontiac Combination has 22 A. R. O. daughters.

Also, 8 Granddaughters of Sir Winana Beets Segis, a son of King Segis. 4 daughters of Hengerveld King. This is an exceptional opportunity to buy these untested daughters of King Segis Pontiac Combination at your own price. Also, a few daughters of Prince Rilma Pietertje De Kol.

These cattle have all been Tuberculin tested and will carry 60—90-day guarantee.

Come early and pick out your cattle. Sale commences at 10:00 *sharp.*

Sale under the auspices of the Iowa Holstein-Friesian Ass'n.

King Pietertje Ormsby Piebe 25th
Is For Sale

He's a show calf like the rest of the sons and daughters of K. P. O. P. You saw them win last fall at the big shows.

His sire is King Pietertje Ormsby Piebe, the best long distance bred bull in the country as well as a sire of show winners.

His dam, Lady Mutual Sadie, is now making a splendid yearly record as a first calf heifer. Shes' a daughter of King Mutual Korndyke, a son of the world record 2-year-old Finderne Mutual Fayne.

This is a chance to buy a son of K. P. O. P. that is sure to increase in value as his dam develops in our herd.

He is priced right and we offer easy terms of payment.

Hargrove & Arnold Norwalk, Iowa

THE MARK OF QUALITY

A *Real* Herd Sire

This nine-month-old Bull, KING HENGERVELD KORNDYKE EUREKA, will fit someone's herd. He is the product of the most careful breeding.

The Sire, Sir Ormsby Hengerveld Korndyke, a 35-pound bull, grandson of the sensational Hengerveld De Kol with 116 A. R. O. daughters, has been carefully line bred in the Ormsby, Hengerveld, Pietertje lines with a sprinkling of De Kol.

The Dam, Eureka Melissa Segis, is by a full brother to King Segis Pontiac Count, sire of eight daughters with records over 1,000 lbs. Eureka Melissa Segis herself has a 7-day record of over 21 pounds as a two-year-old and is finishing up her year's record with over 750 lbs.

To some progressive breeder with the proper kind of herd we will sell this bull at a reasonable figure. Correspondence is welcome, but come to the farm at Blooming Prairie if you can and see him.

This Splendid Son of Sir P. O. M. 41st

For Sale—Ready For Service

Born January 22, 1920

He is an outstanding individual, straight as a line and of unusual quality

HIS SIRE

Sir Pietertje Ormsby Mercedes 41st is destined to become one of the world's greatest sires. His sire is known as "The World's Greatest Sire of Show Ring Winners and Yearly Producers." His dam is the only 1,000-lb. cow in the world having three daughters above 1,000 lbs. or six averaging 995 lbs. No sire in the world equals him in point of proven transmitting ability in both sire and dam—and "41st" is proving it by handing it down to his offspring. The greatest show cow out this past year was one of his daughters. His first daughter to complete a yearly record is finishing with over 1,100 lbs. as a junior four-year-old.

HIS DAM

Edenvale Bessie Homestead, a grand individual with a record of 28.75 lbs. butter and 622.3 lbs. milk. Her dam is a three-fourths sister to Jessie Fobes Bessie Homestead, former world's champion 4-year-old with 34.96 lbs. in 7 days. Her sire is by the noted show bull, Sir Beets Cornucopia Netherland and from a 29-lb. cow. Mooie Mutual De Kol, Homestead Junior De Kol and De Kol 2d's Paul De Kol No. 2—all close up in the pedigree.

Send for pedigree and further information

Offer a Son of

King Colantha Ormsby Bess

A Sir Pietertje—Bess Burke combination. Nine dams average over 1,000 lbs. Dam is by a brother to Pietertje Maid Ormsby, 894 lbs. butter and 21,833 lbs. milk last year. Running at a world's record gait for the year. Over 400 lbs. butter and 10,000 lbs. milk first four months. Several bulls at prices warranting their use in grade herds.

Write or better still come and see them

(Herd under State and Federal Supervision)

Marlow & Randall, Mankato, Minn.

RICHLY BRED

HOLSTEIN BULL CALVES

out of A. R. dams and sired by our two richly bred herd sires — **King Piebe Ormsby Mercedes**, a 35-lb. son of Sir Korndyke Bess and every dam in pedigree over 22 lbs. and **King Pietertje Mercedes Ormsby**, a son of Sir Pietertje Ormsby Mercedes and out of a 19-lb. senior two-year-old dam.

Herd tuberculin tested. Write for information or visit herd.

P. FROST SPAULDING FARM CO.
C. L. Spaulding, Mgr., Warren, Minn.

Two Grandsons of Pontiac Korndyke Ready for Service

No. 1. Born February 17, 1920, a very good individual. His dam is a show cow and an all year producer. She made 24.88 lbs. butter in 7 days as a 3-year-old. Is a granddaughter of Pontiac Aaggie Korndyke. His sire is Sir Korndyke Matador, one of the best sons of Pontiac Korndyke.

No. 2. Also a son of Sir Korndyke Matador, was born Dec. 29, '19. He is a well grown, very straight individual. His dam, a maternal sister to the 24-lb. 3-year-old dam of No. 1, has a 21-lb. 4-year-old record.

Both bulls priced to sell. Tuberculin tested and sold subject to a 60-day retest.

TIM H. BLOSSER, care Bell Farm, Coraopolis, Pa.

Edinboro Lake Farm

Show Type HOLSTEINS Production

Six state yearly record champions 1918-19.

We offer bull calves by Sir Paul Veeman Hengerveld and Sir Ormsby Skylark Fredericka, out of yearly record dams with type.

Edinboro, Pa.

ORIGIN FARM

HORNLESS HOLSTEINS, Registered and A. R. O. Animals, all ages, for sale. Federally Tested.

GEO. E. STEVENSON, Scranton, Penna.

Chart of Recommendations *for* TRACTORS

(Abbreviated Edition)

How to Read the Chart

THE correct grades of Gargoyle Mobiloils for tractor engine lubrication are specified in the Chart below.

A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
BB means Gargoyle Mobiloil "BB"
Arc means Gargoyle Mobiloil Arctic

These recommendations cover all models of tractors unless otherwise specified.

Where different grades of Gargoyle Mobiloils are recommended for summer and winter use, the winter recommendations should be followed during the entire period when freezing temperatures may be experienced.

This Chart is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and constitutes a scientific guide to Correct Tractor Lubrication.

If your tractor is not listed in this partial chart, consult the Chart of Recommendations at your dealer's, or send for booklet, "Correct Lubrication for Tractors," which lists the Correct Grades for *all* Tractors.

Farming Costs and Farm Profits

Some enlightening figures on both subjects

RESULTS of an investigation made by the Department of Agriculture show that in the last seven years the average return on farm investment increased from 4% to 7%. The Department found, however, that in spite of the comparatively higher prices paid for farm products, few farmers made more than $500 cash a year, over and above the things the farm furnished toward the family living.

These figures are eloquent.

The modern farmer who is fully alive to the possibilities of his investment will see a close connection between these figures and the reduction of operating expense. On farm machinery alone it is often possible to effect a saving of astonishing size in the course of a single year.

Prominent engineers state that over 50% of all engine repairs on automobiles, trucks and tractors are due to incorrect lubrication.

In hundreds of tests Gargoyle Mobiloils, when used as specified in our Chart of Recommendations, have shown savings in oil ranging from 50% to 70%, and fuel economies of 17% to 25%.

Lubrication, which seems a small item, is the most important factor in farm machinery operating costs—particularly tractors, trucks and automobiles. Scientific lubrication means longer life, fewer repairs, and slower depreciation.

The Vacuum Oil Company is known the world over as the leader in the science of lubrication. Gargoyle Mobiloils when used as specified in our Chart of Recommendations (shown in part on this page) enable you to get utmost efficiency from your tractor, truck and automobile

Mobiloils

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container.

"Standard" PLUMBING FIXTURES

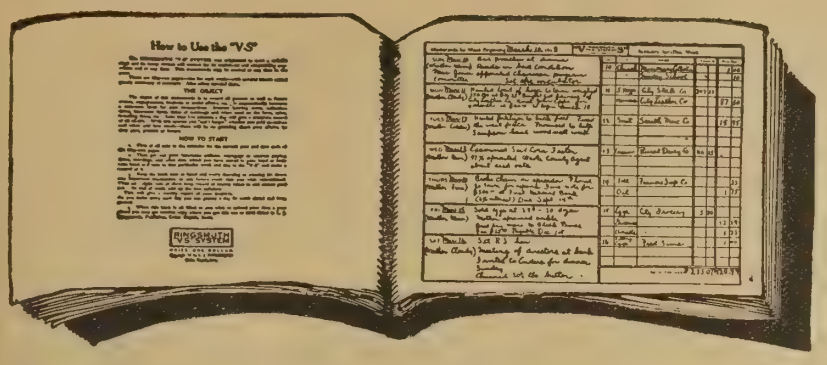
A BATHROOM is not merely a space in which plumbing fixtures are grouped in the most compact and economical manner.

It is the one room which must give service day and night and year after year. It is the center of home health and comfort, and if in addition to its service value it is attractive and beautiful, its use is a pleasure rather than a necessity.

Better bathrooms make healthier homes.

Write for copy of catalogue "Standard" Plumbing Fixtures for the Farm." It is illustrated in colors, shows complete bathrooms and fixtures, as well as model kitchen and laundry.

Standard Sanitary Mfg. Co., Pittsburgh



In addition to the displays of "Standard" Plumbing Fixtures shown by Wholesale Dealers and Contracting Plumbers, there are permanent "Standard" exhibits in the following cities:

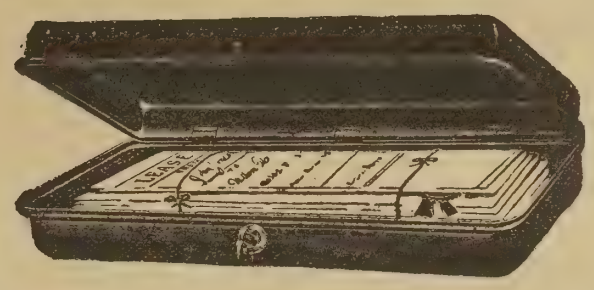
Your choice—*without charge*



The Ringsmith "V-S" Farm Account Book

IT pays—and pays well—to know where you "are at". Uncle Sam's income tax law applies to practically every dairy farmer. Heavy penalties (fines of from $20.00 to $1,000.00) can be imposed for failure to make returns or for fraudulent statements.

And "ignorance of the law is no excuse".
Don't **guess** how much you received for your milk or your hogs or wheat or other crops! Don't **guess** how much you paid out for interest, rental, hired help, repairs, etc! Don't guess — it pays to know!

How can you **know** your returns are correct unless you keep track from day to day of cash received and cash paid out?

It isn't necessary to start a complicated system of bookkeeping to know where you are at—not when you use the Ringsmuth "V—S"! Any twelve year old boy could use it—yet it is complete enough for all practical purposes. It contains places for keeping track of all your farm cash operations from day to day with monthly and yearly summary, has a place for inventory at beginning and end of year—and also contains a digest of what is expected of you under the income tax law. It is just exactly the simple, yet thorough, account book you have been looking for.

A Safe Place to Keep Your Valuable Papers

WHAT happens—usually—when you take out an insurance policy or a lease? What have you done with your Liberty Bonds and your War Saving Stamps—and your other valuable papers—papers that cannot be replaced?

If you are anything like the man I am pretty well acquainted with, you handed them to Mother and said: "Here, Mother, take care of these papers," and Mother proceeded to tuck them away in a corner of the desk or somewhere, where only she could ever find them! Which is all right! Bless Mother's heart! She is a mighty good person to watch such things! But why not get one of these steel boxes for her? She'll probably hide the box, but your papers will all be in the same place any way!

These boxes are made of good heavy steel plate, with strong lock and two keys. They are an ideal place for keeping Liberty Bonds, War Saving Stamps, Insurance Policies and any other papers you wish to safely keep.

Neither of these articles is for sale. There is no price set on them! But we will gladly send either one to any reader who will go to the trouble of getting just two subscriptions for Hoard's Dairyman, and send them to us. These subscriptions may be either one year for $1.00 or three years for $2.00—new or renewal. Your own renewal may be included, but does not count unless accompanied by at least one other.

Both articles will be sent for a list of just three subscriptions.

Use the coupon below or write the same thing on a sheet of paper.

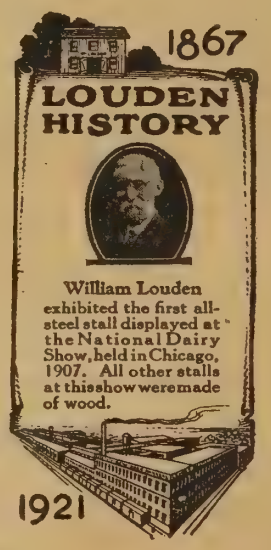
LOUDEN

LABOR SAVING BARN EQUIPMENTS

Make Your Cows Pay a Bigger Profit

If you have only a few cows you may feel it is not going to make much difference one way or the other if each cow gives a quart more or less of milk per day—although the gain or loss of that much milk would actually count up big in the course of a year.

But when you add to the milk gain, the daily saving of labor in feeding, watering the herd and barn cleaning, preventing waste of feed and loss of manure value, the better health and more contented state of your cows, the greater pleasure and ease of doing the chores, and the cleanliness of your barn—if you could figure all of these things out in dollars and cents you would find



Louden Barn Equipment Saves Money Every Day in the Year

Louden Stalls and Stanchions represent over fifty years of study in building equipment that is simple, plain and smooth in construction—equipment that will outlast the barn itself. Freedom from a lot of complicated parts that are apt to get out of order, makes it easy to handle the herd morning and evening. The Louden Tubular Steel Swinging Stanchion gives cows genuine pasture comfort—cows are free to turn around and card themselves—can sleep with their heads nestled against body as though they were loose in the pasture—a comfort that shows up big in a fuller milk pail. It is the only stanchion that can be used with the Louden High Built-Up Feed-Saving Manger Curb.

Louden Stalls make it easy to keep the herd clean, saving much disagreeable work—insuring a better quality of milk and making more sanitary conditions.

The Louden Litter Carrier shows such a big profit every day that if you had it in your own barn you would never think of doing without it. That's the way thousands of users feel about it. It takes out the equal of five wheelbarrow loads of manure each trip—takes it clean without dripping or scattering—takes it away from the entrance and dumps it. You can't overload the Louden Carrier. It operates so smoothly that a 12-year-old boy finds the job a pleasure instead of the usual drudgery.

40% increase in milk yield during the winter months is not an unusual report from farmers using the *Louden Quick Detachable Water Bowls.* They also do away with that disagreeable chore of having to turn the cows out to water once or twice a day regardless of the weather.

Get Our Big Illustrated Catalog

"Everything for the Barn." It tells all about the Louden Feed Carrier that takes enough feed at a single trip to care for 20 cows, as well as 150 other big labor savers for the barn, including full information on Stalls and Stanchions, Animal Pens of all kinds, Window Ventilators, Cupolas, Hay Unloading Tools, Barn and Garage Door Hangers, Litter Carriers, Water Bowls, Manger Divisions. No obligation on your part—write today for your copy.

Going to build or remodel a barn?—we can be of great service to you. If you will give us some idea of what sort of barn you have in mind, number and kind of stock you wish to house, we will gladly work out and send you, without charge, suggestive plans to best meet your particular needs. Also the Louden Barn Plan Book showing many styles and sizes of barns, with detailed information on every phase of barn building. Get this helpful service before you build. It will save you trouble and money and costs you nothing.

Please send postpaid, without charge or obligation, book checked below:

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Volume LXI FORT ATKINSON, WIS., FEBRUARY 25, 1921 Number 6

Six Old Friends Whose Advice Has Helped Me

I HAVE a half dozen old friends who help me a great deal with my dairy farming. Many a time do I turn to them for assistance and never yet have they failed me. They teach me new things and freshen my mind on important facts I might otherwise forget. I spend a good bit of time with them, evenings, and wish I might find more spare minutes to give to their counsels. Yet; when I do not crave advice, they do not force it upon me; on those nights when I am altogether too tired to enjoy their company, they do not disturb me.

⚜

My old friends are books—six texts on agriculture, tried and proved. Perhaps they would be less satisfying to another in his care of a dairy herd, but their every-day, workable information makes them invaluable to me. I have selected them from a great number. Others have within their covers information that is sometimes needed to supplement these six. Such books I keep on the shelves of my modest bookcase. But these six find a place on my desk—that I may turn to them frequently. If I had to choose between them and all the agricultural texts I have seen, I would readily stick by these six which have served me so well. I would not give up my weekly dairy paper, nor would I think of confining my reading entirely to agricultural subjects, but my few book friends are my daily standbys.

"Feeds and Feeding" holds first place among my book assistants. It is inexhaustible. Also, it yields its facts most readily, for its index is the most complete of those I have seen. When I do not seek special help, I like to turn its pages and ponder on the wealth of experience which is mine, if I will but read. On its pages are recorded the results of experimental feeding since feeding tests began. The facts secured in foreign experimental stations, our own agricultural colleges, and on practical farms are brought together so that I may apply in my own barn the truths made known through many years of careful experimenting. It is the most complete treatise on agriculture I know—being much more than a discussion of farm rations. For example, its explanation of the secretion of milk is the best I have read. But its most practical aid to me is in giving me all the information I need in putting the right amounts of the proper feeds before my farm animals. If I desire to balance a ration for a cow on test, "Feeds and Feeding" tells me just how much of nutrients I must furnish and the quantities of each feed which must be included. If I need to purchase supplementary concentrates its tables of analyses show which ones are highest in nutrient values and, therefore, cheapest, and its discussions indicate just what results I may expect from feeding them. When my dairy paper discusses feeding questions, my handy text gives me additional information if I seek it. I like to know the "why" and "wherefore" of my rations. "Feeds and Feeding" tells me.

⚜

"Dairy Cattle and Milk Production" comes next. I never turn to it without gaining a new slant on some phase of caring for and managing my herd. Professor C. H. Eckles, who wrote this book, knows cows. If anyone can turn the light on the "darkest place in the world", the inside of a cow, I believe he can. His pointers in starting a dairy herd are full of value. I have passed them on to a number of beginners to their profit. So far as I can, I adapt my practices to his advice on caring for my dairy animals from the time they are calves until they are profitable producers in the milking herd.

This book gives me the best explanation of the reason for liberal feeding of my cows. In studying it I have come to understand that I must first furnish the nutrients required to maintain the cow's body and then give her an additional supply for use in making milk. It has shown me that my profits come from the feed my cows consume in excess of the requirements for their body maintenance. The chapter on "feeding for milk production" has yielded me facts which have paid me well for the time I have spent with this book, even on those evenings when my tired body demanded that I put my book aside and "call it a day".

⚜

I don't go in much for amateur treatment of sick animals. If a qualified veterinarian can be reached when a valuable cow needs attention, I put it up to him. I pay out good money for that help, but believe it is profitable in the long run.

But there are many times when a veterinarian's help cannot be had quickly—also there are many minor ailments that I can take care of myself if I am well directed. I have Mayo's book, "Diseases of Animals", and believe it has saved me a number of losses. The first case of milk fever in my herd would have been fatal had I not followed the simple directions for treating that disease. My boy's bicycle pump and a milking tube did the business. When the veterinarian finally came, the cow was on her feet. He said she would have been dead had her udder not been pumped full of air. A number of other cases of less importance have been successfully handled when I might have failed without the guidance of this book. I like to read from it occasionally that I may be able to prevent as well as cure the minor animal diseases.

⚜

Like a lot of other farmers I was never cut out to be a mechanic. I do most of my repairing with an oil can. If I can keep machinery "greased up", I feel pretty safe. So it is with my fields. I'm a better cow man than a tiller of the soil. Knowing that, I am careful not to let my fields get "out o' kilter". I keep them oiled up by the liberal application of farm manures. Charles E. Thorne's book of that title, "Farm Manures", has helped me a great deal. It gives me an understanding of the needs of my land as has "Dairy Cattle and Milk Production" of the needs of my cows. It has taught me the value of farm manure and has shown me the loss I used to suffer through wasting it. Some years I have needed to count in the worth of the manure hauled back to the fields in order to figure a profit from my work.

I am not yet satisfied with the attention my land receives but I am certain this book will help me if I continue studying its pages.

⚜

The fifth of my book friends is of a different sort. It doesn't help me so much in my daily work as it does in renewing my faith in the cause of dairy farming. I take a good bit of pride in this industry which supports me, and which, I hope, in return, to help support. When Hoard's Dairyman published the first of Dr. E. V. McCollum's articles, I read each one many times. "Here at last," I said, "is proof for my feeling that dairying is something more than routine work on the farm—that it is an industry necessary to mankind." I don't know very much about what a vitamine looks like. If I should see one in the stable I probably wouldn't recognize it, unless perhaps it might appear in the foam of a freshly drawn pail of milk. But those articles are a great satisfaction to me. They put a sentiment into my work when it might sometimes seem drudgery if I had no other reward than my monthly cream check. I preserved them carefully and used them to good effect several times when called upon to speak for the dairy cow. When Dr. McCollum's book, "The Newer Knowledge of Nutrition", was published I made it one of my six stand-bys and put the articles from Hoard's Dairyman with it.

⚜

"Outlines of Dairy Bacteriology" is the last of the six. It is like Dr. McCollum's discussion of vitamines

(Continued on page 242)

FARMSTEAD OF HULL BROS., OHIO, KNOWN NATIONALLY AS BREEDERS AND SHOWMEN OF BROWN SWISS CATTLE

The Home Grown Ration

Address Delivered before the 48th Annual Meeting of Wisconsin Dairymen's Association

GEO. C. HUMPHREY, Wisconsin College of Agriculture

HOME grown rations in many respects are like our tariff laws. As such laws tend to increase revenues, so home grown rations, generally speaking, tend to increase the revenues of dairying. Like our government's tariff laws, such rations suggest the encouragement of home industry and the discouragement of a too free indulgence in some outside or foreign class of articles, articles of feed in this consideration. In reality, the home grown ration makes dairying on the average and small sized farm a possibility when otherwise there would not be the general and extensive practice of dairying that now obtains. In other words, the good price received for the home grown ration as it is converted and sold in the form of milk, is the thing that keeps the majority of farmers satisfied to remain in the dairy business. If dairymen were obliged to depend upon purchased rations altogether for the maintenance and support of their herds, they would in the majority of cases go out of the business until a more adequate system of producing, manufacturing, and distributing dairy products were understood and adopted.

Home grown rations, like tariff laws, have a sense of protection. They are a protection against feed monopolies that would very soon spring up if dairy farmers were compelled to procure rations largely from other sources than the farms upon which cows are maintained. The possibility of utilizing farm grown feeds is a large factor in taking care of the supply and demand relative to dairy feeds and unquestionably tends to keep market prices for feeds within reasonable limitations. The farm should be the source of the greater proportion of all feed rations and a careful study of its organization with a view to providing the best kinds and amounts of feed will be a great protection against buying feeds to the extent of reducing profits and possibly incurring losses.

Home Grown Rations Subject to Ills

Once more, like the tariff laws, home grown rations are subject to ills and quite frequently are too generally accepted without being thoroughly understood. Men become adherents to the policy of adopting them regardless of economic conditions, varying seasons, years that differ from other years, localities that are different and the variability of cows due to peculiarities of individuality and changes in their periods of lactation. The home grown ration, in spite of all its many virtues and possibilities, may defeat one in realizing his greatest opportunity in dairying. Only a careful understanding of the facts underlying milk production will enable one to utilize the home grown ration to the best advantage. Such facts will teach us when the simplest rations will suffice and when it will be profitable to supplement home grown rations with purchased feeds.

Important Feeding Facts

The following fundamental facts relating to milk products are important to bear in mind:

Feed and water are the true sources of milk and body maintenance, and naturally two very important factors influencing the nutrition of cows. Fresh air, proper temperature of stable, regularity of feeding and milking, sanitation, and all that implies proper care are other essentials equally as important, but bred for production cows, all conditions being favorable, will produce milk throughout the greater part of their lactation periods in proportion to the kinds and amounts of feed provided for and consumed by them.

The variability of cows with respect to their nutrition requirements and of conditions relating to the nature and availability of feeds, require dairymen to be observing and careful at all times in the matter of supplying rations to individual cows. A deeper study of rations than merely supplying a variety of feeds in abundance, must be made if maximum and most profitable results are to be secured in the conduct of dairy herds. Cows require and should have rations that contain the necessary nutrients for body maintenance and for producing the milk flow normal to their capacities and stages of lactation. Unemployment is regarded one of the chief sources of crime today in the social aspect of our country. Unemployment on the part of cows in not being worked up to their normal capacities by their owners is the source of a great loss to our dairy industry.

What June Pasture Teaches

An abundance of June pasture teaches the most casual observer the importance of supplying cows with adequate feed rations. It is common knowledge that cows very generally will improve in physical condition and greatly increase their milk flow when turned from their winter environments and source of feed supply on to prime June pasture. Such instances in the light of present day knowledge of dairying and feeding cannot be regarded as complimentary to the owner's ability as a cattle feeder. One who is fortunate in having an abundance of June pasture is in a position to appreciate it as the one most complete and satisfactory home grown ration. If the season, however, when it is in its prime could be lengthened to cover a greater part of each year, profits in dairying could be greatly increased.

Many people are deceived as to the length of period that June pasture is prime and adequate as a ration. It is gratifying to come in contact with many dairymen who have been taught modern methods of dairying and who find it possible to feed cows during the winter and summer in a manner to get June pasture results. The change in such instances from winter to June pasture and from such pasture to late summer feeding, does not suggest inadequate feed rations for maintenance and milk flow. Dairymen who succeed in wintering and summering their cows in a manner to get such normal returns have learned the secrets of June pasture and the fundamental facts that teach us how to best utilize home grown feeds in supplying cows with proper rations.

Feed Requirements of Cows

From what June pastures and our experiment stations have taught us, a very good working knowledge of the feed requirements of cows is understood at the present time. A cow weighing 1,000 lbs., for example, capable of producing fifty pounds of 4 per cent milk, will require an abundance of June pasture or the equivalent of approximately forty pounds of corn silage, fifteen pounds of grain, concentrate mixture, and eleven pounds of clover hay. HOLSTEINS ON BROAD ACRE FARM, VIRGINIA

For many years Southwest Virginia specialized in beef cattle for export, shipping them direct from the blue grass fields. In the past few years in the central part of the state more attention is paid to the dairy business, and many Holsteins are finding a place there. The grazing period is about ten months of the year which reduces feed costs.

The Broad Acre Farm owns one hundred registered Holsteins and is well equipped for dairying. It has about fifty acres in alfalfa, which grows well in that section, and one hundred acres of corn, and half that acreage of peas and soja beans for hay are usually planted.

The herd is regularly federally tested for tuberculosis.

About five hundred tons of ensilage are usually put up in the four silos, and sufficient quantity of corn, hay, and other rough feed is raised for the herd.

The dairy buildings were laid out by the state health officer. The milk house stands on the crest of a hill, with drainage in all directions. The stable accommodates fifty-six cows. It is equipped with a milking machine and steel stalls, stanchions, and a litter carrier. It has fifty-six windows which allow sunshine to reach every stall every day, one side in the morning and the other in the afternoon, has well planned ventilation, the cows face outwardly.

The concrete floors are easily washed with rubber hose from a four-thousand-gallon pneumatic tank, which tank also supplies water in the hay and feeding barns, which are eighty by one hundred twenty feet and located one hundred feet distant.

The milk house with concrete floor and ice vats is also well ventilated, and contains a hot water boiler for sterilizing the milking utensils.

A large quantity of the milk is fed directly to the calves, as special attention is given to raising them, and to seeing that they get a good thrifty start. The balance of the milk is shipped to Norfolk, where it is delivered in bottles to the Broad Acre Farm special customers, by their own established retail milk delivery system.

SHOULD WE CONSIDER SOY BEANS

The Crop Is Profitable Where Alfalfa and Clover Cannot Be Grown

G. M. BRIGGS, Wisconsin College of Agriculture

WITH more than 5,000 acres planted for seed production in 1920, hundreds of bushels being planted with corn for silage in all parts of the state, and many farmers trying small pieces for hay, there seems to be no question but that the soy bean is in Wisconsin to stay. Despite the many difficulties encountered, there are so many points in the soy bean's favor that it takes more than one partial failure to turn a farmer against it. So many factors enter into successful soy bean culture, whether it be for hay, seed, silage, or green manure, that there is no end to the open field for experimentation.

Variety plots were planted last year in many different parts of Wisconsin on various types of soils. The results might lead one to make some rash statements. When we consider variety of seed, germination, depth of planting, time of planting, method of cultivation, type of soil, amount of rainfall, etc., one can see how results one year may be contradicted in another. I have endeavored to base my statements on good fair trials and on observational data taken from all parts of Wisconsin under varying conditions.

Who Can Raise Soy Beans for Seed?

The soy bean makes the greatest hit with the farmer who has been failing with other legumes. Soy bean seed advanced greatly in price last year and some farmers raised it as a cash crop. From what I learn, the average man who will continue in this business is likely the one who lives on medium light soil where the soy bean is his surest legume. The soy bean market is not stabilized as is the dairy market, and no farmer in the dairy business can afford to change his system of farming for a crop which came into the limelight in a twinkle and may go out the same way. Our experience on the Station Farm at Madison on good fertile soil is that we get a yield of eight to twelve bushels, while on the lighter soil in Northwestern Wisconsin the average five-year yield will be about double that figure.

If we were to conclude from the experiences we have had we would advise farmers on heavier soils to continue raising other dairy feeds, though if soy bean seed were high priced for a series of two or three years there is no question but heavy soil farmers would be learning to grow the crop. With uncertain seed prices, I am not in a position to advise as to just who can profitably raise seed soy beans. This depends upon the season and the man that plants soys for the cash crop takes a chance and lets the season do the rest. Were Wisconsin the only selected place in the United States where soys can be raised, it would be an easy matter to get every light acre planted to this crop, but with Northern Ohio, Indiana, Illinois, and Southern Michigan producing beans which are looking very promising in our variety tests as a hay or silage crop, a different proposition presents itself. The growers in these other states do not produce many more soy beans to the acre, but are a little more certain of getting a crop. Climatic conditions are different, making it possible in some cases to use harvesting machinery which will materially lessen expense and insure a better crop.

Where Do Soy Beans Fit in a Rotation?

The planters of soy beans in Wisconsin are farmers who have had poor success with other legumes. Soy beans are being planted not only as a seed crop but as a soil enricher. We find soy beans growing on the poorest of soils where other legumes have proven a failure about three out of four years. The soy bean may be planted in the same field for two years, then put in some winter grain crop, followed by seeding in with clover in the spring—then hay if catch is obtained which can be followed by corn and soy beans again. Few farmers having sure enough catch clover or alfalfa soil are in the soy bean business in Wisconsin. If they were they could follow a rotation of corn, soy beans, small grain, and clover, or, where the soil was especially heavy, have corn follow corn. At the Indiana Station this rotation yielded seven bushels more of wheat to the acre than where the soy beans were left out of the system. I don't think, however, that any man who has established a dairy herd and has full equipment should change his good Wisconsin system to jump into an uncertainty and try to raise soy beans as a cash crop, unless some use can be made of them further than what we now know. Some farmers report best yields where soys are being planted for the third consecutive year, while others report very small growth after the second year and that in every way the crop was a failure as to seed or foliage.

We cannot advance a reason why soy beans should not do well on the same piece more than two successive years but, even on very poor type of soils, it would be an extremely poor policy to try to grow it continuously. Growers will adopt some system whereby cultivated crops will alternate. I expect soy beans are being planted for the two purposes of soil improvement and seed more than for other reasons. In every grower's mind is pictured great fields of clover growing where soy beans are paving the way—leaving an available form of nitrogen close to the surface. It would be a wise plan to follow clover after soy beans for this very reason. On S. Bassett's farm in Burnett County, the only clover is where soy beans were two years ago, which was followed by rye and then seeded in the spring. The field adjoining with no beans, but top-dressed and seeded just the same, is perfectly bare of clover.

Could Be Used as Green Manure

The soy bean does not add a great amount of fertility to the soil. It takes away just about as much as is added, but what is added is of course left near the surface, easily obtained by the following crop. What farmers could well afford to do, when soy bean seed gets down to normal prices again, is to plow under a crop, thereby increasing not only the fertility of the soil but the humus as well. This organic matter would increase the water-holding capacity of the soil, which in turn would help furnish food for plants over a much longer period than otherwise. M. H. Reese in Burnett County in 1919 planted about forty acres of soys, five of which had been planted broadcast to a poor germinating lot of beans. I visited him in August and this five-acre piece looked pretty good to plow under. He was determined to plow it under and plant winter wheat on the piece. We sometimes think people unwise to plant any kind of wheat on sandy soils, but Mr. Reese planted it anyway and secured a splendid field of winter wheat. Instead of little spindling plants with no extra stools as were found on the check plot where no soys were plowed under, he had tall, bushy plants with from three to six stools on each one. This part of the field was so much thicker that, were the check plot to yield five bushels, this piece where soys were turned under would yield twenty. He got a return from each acre that otherwise would take 3½ or four acres.

A Splendid Supplement for Clover Hay

If I were in the active farm business in Wisconsin feeding cows and general farm animals, I certainly would raise all the alfalfa hay that I needed, provided my soil was suited for it. If not, I would certainly raise a barn full of clover, providing I could get a stand. Yes, I would lime my soil, inoculate my seed, drain my soil, and do everything within my power to get a stand of clover. But if an open winter came along and froze my clover and frosted my hopes, I wouldn't give up. Suppose I would depend on the left-over timothy in the clover or alfalfa field, or on the adjoining wild swamp, or the large straw pile at the rear of the barn, or on corn stover to furnish this roughage for my cows? I wouldn't unless I was suddenly stricken, because I know what soy beans will do in providing hay. Yes, it's coarse, hard to cut, hard to cure, has all the earmarks of a serpent, but once in the mow just leave it to demonstrate its value. George Hooper in Jefferson County had a field of second year clover and timothy in 1919. About two-thirds of it was left last year while one-third was plowed and put into soy beans for hay. The final result showed that there was a greater tonnage by six tons from the six acres of soy bean hay than from the thirteen acres of clover and timothy. The clover and timothy yielded one ton to the acre while the soy beans yielded three tons. Mr. Hooper's experience shows that there is a place for soy bean hay, even though the clover hasn't killed out but is only running to timothy a little strong. This same Mr. Hooper plowed up a marsh late this spring on part of which he planted soys for hay and on the other part corn for silage. In some places the soys were fully as tall as the corn and, from appearance on August 17, there was a greater tonnage of dry matter in the beans than in the corn. As for the value of soy bean hay, the limited experiments that have been carried on all have demonstrated its value to be about the same as alfalfa hay. There are no arguments against its use when cut at right stage and cured properly. It is true that soy bean stalks sometimes grow rank and seem to be all out of proportion in their present form for farm animals to use, but if portions of the coarsest stalks are left in the cows' mangers they can be easily cleaned out and fed to horses which always whinny for more. S. C. Clapp, assistant director of the Mountain Station at Swannanoa,

New York Agricultural Society

H. H. LYON, NEW YORK

At the annual meeting of the state agricultural society at Albany marketing questions were very prominent. The start was made on the milk marketing questions. Dr. Jordan of the Geneva Experiment Station, president of the association, asserted that the milk marketing conditions of the state are the most important of any that we have and they are also the most difficult. The program was well planned. The best speakers that the League has were invited and also some reasonable men from the dealers' side.

Mr. Milliman, head of the League organization department, went over the history of the League from 1907. The history was brought up to last September when the manufacturers refused to buy any milk from the League. The League, said Mr. Milliman, was able from October 1916, through all the war period, to sell milk quite readily. It was a sales agency. In September it became evident that something more must be done. Real marketing with an equitable distribution of proceeds must come soon. The post-war period brought its serious problems. It was seen that something would have to be done as long ago as April, 1919. The pooling plan was then passed upon to be launched whenever it became necessary. The dairyman is not planning to interfere with the law of supply and demand, but to prevent the other fellow from doing so. The major portion of the milk in this territory is used as fluid milk. This, asserted Mr. Milliman, should bring cost of production. We are not considering now any profit. This can only be done by the whole business being handled by the organization. To make the city supply sure, producers should get what it costs to produce the milk.

The speaker called attention that no coercion has been used to secure signatures to the contract. If the plan does not appeal to dairymen when completely understood they should keep out of it. Thursday night, January 13, there were 33,544 contracts in the League office.

Before any discussion of milk marketing questions in a general way was indulged, a paper was read by D. Fox, president of the Borden Farm Products Company. Mr. Fox in an introductory way mentioned the marketing commission of 1917-18 of which Dr. Jordan was president, and called up the visit paid to the railroad terminal where milk is received in th latter part of the night and early morning hours. He mentioned the other difficulties that the distributors have and urged the great service rendered by them. They are not middlemen, said Mr. Fox, and no attempt should be made to eliminate them. The attacks of business reformers who regard it possible to remodel service over night are harmful. These attacks destroy confidence and lessen the use of the commodity. There is room for improvement, but a great service is rendered. Mr. Fox admits that there is over-lapping service. In theory every distributor would be willing to eliminate all but his own. He does not, however, believe in a monopoly in milk distribution. Something should be done to secure closer co-operation between producer and distributor. They should not oppose, but get together and better understand each other.

Professor Babcock of the college spoke of the co-operative movement in the state. It was necessity that prompted the organization of the League and it was adulterated feeds and seeds that caused the organization of the G. L. F. Exchange. Farm bureaus assisted materially in the formation of these organizations. All our various co-operative organizations are based on commodities. Milk was the first. The association prospers when it sells all and it breaks down when it fails to sell all. Pooling is the only way out now.

The president of the organization, W. H. Jordan, gave the annual address for this, the 89th annual meeting. The society has an opportunity for great future usefulness. It should be a forum for the discussion of important questions relating to farming. There has been a marked decrease in the proportion of farm population in recent years, but there has been an equally marked improvement in efficiency. He urged that we do not go back to the old political methods which resulted in such frequent changes in the personnel of the department. Uncertainty of tenure is harmful as are short periods of service. The speaker did not go into the much discussed question of a double head, nor the size of the commission, but he evidently favors a council to appoint.
